Walk About Rory I. Jagdeo,2020-10-28 Rory I. Jagdeo lost his brother Steve to COVID-19 and was inspired to write this story of leaving Guyana at almost twenty years old, boarding an airplane for the first time to Toronto, Canada. It was an unlikely journey for a man with such humble beginnings—a man whose great-grandparents were taken from India to work on a sugar plantation as indentured servants in the late 1800s. In this autobiography, he looks back at his boyhood and adolescence growing up in a village called Fyrish on the Northeastern coast of Guyana, a country on South America's North Atlantic coast and how life changed when he went to college in Toronto. From there, he highlights his life's challenges, pleasures, and close calls. While his life has been challenging, he has never given up. With hard work, he has followed destiny's path and explored the pleasures of life. From his life as a musician and recording artist, to his adventures traveling, to his romantic exploits and time as a caregiver, the author celebrates his incredible life.

basics of sound and hearing professor Ibrahim elnoshokaty ,2022-10-30 In physics, sound is a vibration that propagates as an acoustic wave, through a transmission medium such as a gas, liquid or solid. In human physiology and psychology, sound is the reception of such waves and their perception by the brain.[1] Only acoustic waves that have frequencies lying between about 20 Hz and

20 kHz, the audio frequency range, elicit an auditory percept in humans. In air at atmospheric pressure, these represent sound waves with wavelengths of 17 meters (56 ft) to 1.7 centimeters (0.67 in). Sound waves above 20 kHz are known as ultrasound and are not audible to humans. Sound waves below 20 Hz are known as infrasound. Different animal species have varying hearing ranges. Acoustics is the interdisciplinary science that deals with the study of mechanical waves in gasses, liquids, and solids including vibration, sound, ultrasound, and infrasound. A scientist who works in the field of acoustics is an acoustician, while someone working in the field of acoustical engineering may be called an acoustical engineer.[2] An audio engineer, on the other hand, is concerned with the recording, manipulation, mixing, and reproduction of sound. Applications of acoustics are found in almost all aspects of modern society, subdisciplines include aeroacoustics, audio signal processing, architectural acoustics, bioacoustics, electro-acoustics, environmental noise, musical acoustics, noise control, psychoacoustics, speech, ultrasound, underwater acoustics, and vibration.
