The volume contains 38 chapters contributed by leading researchers and suppliers in the EUV source field. Topics range from a state-of-the-art overview and in-depth explanation of EUV source requirements, to fundamental atomic data and theoretical models of EUV sources based on discharge-produced plasmas (DPP) and laser-produced plasmas, to a description of prominent DPP and LPP designs and other technologies for producing EUV radiation. Additional topics include EUV source metrology and components (collectors, electrodes), debris mitigation, and mechanisms of component erosion in EUV sources. The volume is intended to meet the needs of both practitioners of the technology and readers seeking an introduction to the subject.

**Variability in the Moroiso Phase of the Early Jomon Period of Japan** Junko Habu,2001-01-01 This book examines the

settlement patterns and intersite variability in lithic assemblages of Early Jomon (ca. 5000 BP) hunter-gatherers in Japan. A model is proposed that links regional settlement patterns and intersite lithic assemblage variability to residential mobility. The results of this study suggest that the Early Jomon people were not sedentary, as

previously assumed, but instead moved their residential basis seasonally. The implications of this result are discussed in the context of the development of hunter-gatherer cultural complexity in general and the course of Japanese prehistory in particular.
