**Heavy Minerals in Use** Maria A. Mange, David T. Wright, 2007-09-10 The book is structured thematically, encompassing principles, processes and products, practice and applications. Discussion of processes that control heavy mineral assemblages throughout the rock cycle are presented by leading experts, whose key-note works are followed by specialist case studies. Each work also provides details on the geology of the study area, techniques and data treatment. The high number of contributions represent the collective experience and wisdom of generations of geologists, and

provide an invaluable source of references to works carried out in many parts of the world. \* Presents a unique and authoritative resource of immediate relevance and practical use to the researcher and applied geologist \* Contains case studies demonstrating the broad range of applications of heavy minerals in a variety of modern and ancient geological settings, and in resource exploration \* Includes examples of geological problems from employing heavy mineral analysis and establishing criteria that can be applied before deciding to undertake a study

**Biotransformations** D R Hawkins, 2007-10-31 Now in its seventh outstanding volume, Biotransformations has become established as a unique and important source for those involved in the discovery and development of new compounds. It broadly covers the scientific literature for the period 1987 to 1994. The series provides a complete survey of the biotransformations, in vertebrates, of the following: Pharmaceuticals; agrochemicals; food additives; environmental chemicals; industrial chemicals. Biotransformations provides a ready way of accessing information on the known pathways for the biotransformation of structurally-related compounds. Key functional groups provide an index-related procedure for retrieving information on compounds of interest. A further index allows the retrieval of examples of specific biochemical reactions which may have wider application. Each volume corresponds roughly with the scientific literature published during a calendar year. Each volume contains a review chapter which discusses examples of novel biotransformations, species differences, stereochemical aspects and mechanisms of toxicity associated with specific biotransformations.

A Critical Review of Equilibrium Data for Proton- and Metal Complexes of 1,10-Phenanthroline, 2,2'-Bipyridyl and Related Compounds W.A.E. McBryde, 2013-10-22 A Critical Review of Equilibrium Data for Proton- and Metal Complexes of 1,10-Phenanthroline, 2,2'-Bipyridyl and Related Compounds

is a compilation of acidity constants for the 1,10-phenanthroline and 2,2'-bipyridine ions and their derivatives, as well as stability constants for metal complexes formed by the conjugate bases of these. These equilibrium data are critically examined. This monograph includes values determined in non-aqueous or mixed solvents, as well as those for a large number of mixed metal complexes incorporating these bases and a second ligand. The survey also contains known values for the enthalpies and entropies of formation for the proton- and metal-ion complexes. The compilation indicates the conditions under which the equilibrium constants apply and the methods by which they were determined. The acid-base properties of the compounds are represented by the acidity constant of the phenanthroline or bipyridine ion expressed as a pK value. Nearly all the values listed were obtained either potentiometrically or spectrophotometrically, both of which depend fundamentally on measurements of pH or hydrogen-ion concentration. This book will be of value to chemists.

Video Microscopy Shinya Inoue, 2013-11-11 Ever since television became practical in the early 1950s, closed-circuit television (CCTV) in conjunction with the light microscope has provided large screen display, raised image contrast, and made the images formed by ultraviolet and infrared rays visible. With the introduction of large-scale integrated circuits in the last decade, TV equipment has improved by leaps and bounds, as has its application in microscopy. With modern CCTV, sometimes with the help of digital computers, we can distill the image from a scene that appears to be nothing but noise; capture fluorescence too dim to be seen; visualize structures far below the limit of resolution; crisp images hidden in fog; measure, count, and sort objects; and record in time-lapsed and high-speed sequences through the light microscope without great difficulty. In fact, video is becoming indispensable for harnessing the fullest capacity of the light microscope, a capacity that itself is much greater than could have been envisioned just a few years ago. The time seemed ripe then to review the basics of video, and of microscopy, and to examine how the two could best be combined to accomplish these tasks. The Marine Biological Laboratory short courses on Analytical and Quantitative Light Microscopy in Biology, Medicine, and the Materials Sciences, and the many inquiries I received on video microscopy, supported such an effort, and Kirk Jensen of Plenum Press persuaded me of its worth.
