Applied Concept Mapping Brian Moon, Robert R. Hoffman, Joseph Novak, Alberto Canas, 2016-04-19 The expanding application of Concept Mapping includes its role in knowledge elicitation, institutional memory preservation, and ideation. With the advent of the CmapTools knowledge modeling software kit, Concept Mapping is being applied with increased frequency and success to address a variety of problems in the workplace. Supported by business application case studies, *Applied Concept Mapping: Capturing, Analyzing, and Organizing Knowledge* offers an accessible introduction to the theory, methods, and application of Concept Mapping in business and government. The case studies illustrate applications across a range of industries—including engineering, product development, defense, and healthcare. The authors provide access to a free download of CmapTools, courtesy of the Institute for Human and Machine Cognition, to enable readers to create and share their own Concept Maps. Offering examples from the United States, Canada, Australia, Spain, Brazil, Scotland, and The Netherlands, they highlight a global perspective of this dynamic tool. The text is organized into three sections: Practitioners' Views—supplies narratives, guidance, and reviews of applications from career Concept Mappers Recent Case Studies and Results—presents in-depth examinations of specific applications and their results Pushing the Boundaries—explores what's possible and where the boundary conditions lie *Applied Concept Mapping* facilitates the fundamental understanding needed to harness the power of Concept Mapping to develop viable solutions to a virtually unlimited number of real-world problems.

Concept Mapping in Mathematics Karoline Afamasaga-Fuata'i, 2009-04-21 Concept Mapping in Mathematics: Research into Practice is the first comprehensive book on concept mapping in mathematics. It provides the reader with an understanding of how the meta-cognitive tool, namely, hierarchical concept maps, and the process of concept mapping can be used innovatively and strategically to improve planning, teaching, learning, and assessment at different educational levels. This collection of research articles examines the usefulness of concept maps in the educational setting, with applications and examples ranging from primary grade classrooms through secondary mathematics to pre-service teacher education, undergraduate mathematics and post-graduate mathematics education. A second meta-cognitive tool, called vee diagrams, is also critically examined by two authors, particularly its value in improving mathematical problem solving. Thematically, the book flows from a historical development overview of concept mapping in the sciences to applications of concept mapping in mathematics by teachers and pre-service teachers as a means of analyzing mathematics topics, planning for instruction and designing assessment tasks including

applications by school and university students as learning and review tools. This book provides case studies and resources that have been field tested with school and university students alike. The findings presented have implications for enriching mathematics learning and making problem solving more accessible and meaningful for students. The theoretical underpinnings of concept mapping and of the studies in the book include Ausubel's cognitive theory of meaningful learning, constructivist and Vygotskian psychology to name a few. There is evidence particularly from international studies such as PISA and TIMSS and mathematics education research, which suggest that students' mathematical literacy and problem solving skills can be enhanced through students collaborating and interacting as they work, discuss and communicate mathematically. This book proposes the meta-cognitive strategy of concept mapping as one viable means of promoting, communicating and explicating students' mathematical thinking and reasoning publicly in a social setting (e.g., mathematics classrooms) as they engage in mathematical dialogues and discussions. *Concept Mapping in Mathematics: Research into Practice* is of interest to researchers, graduate students, teacher educators and professionals in mathematics education.

Mosby's Nursing Concept Map Creator Jean Foret Giddens, Elaine Kennedy, 2005-05 This unique, easy-to-use program walks you through each step involved in gathering, organizing, and entering patient data into a plan of care. Its flexible design and interactive approach make it a fun and effective way to learn concept mapping techniques while you build real-life skills for collecting and evaluating data for patient care! Applicable to all clinical practice areas, including med-surg, pediatrics, critical care, maternity, and psychiatric nursing. Easy-to-use program walks users through the steps of

constructing a concept map, including: Creating a data sheet with assessment/physical examination findings, treatments, pathophysiology, medications, and more Entering medical diagnoses Identifying appropriate nursing diagnoses and collaborative problems Providing supporting data for each patient problem Prioritizing key nursing diagnoses and collaborative problems Determining nursing interventions Building the concept map and adding arrows to show relationships Creating an evaluation summary Flexible programming allows users to customize their concept maps by moving boxes and adding multidirectional arrows that can point to more than one box to indicate relationships. Data sheet feature allows users to record key preliminary information such as assessment/physical examination data, pathophysiology, treatments, diagnostic tests/results, and much more. Interview data can be entered using a functional health patterns or review of systems approach. Data is color-coded by type (assessment, nursing diagnosis, intervention, etc.) throughout the program and in the finished concept map and to help users visually differentiate content and more clearly understand the complexities of patient care. The save and modify function allows users to return at a later date to make modifications to data and/or the concept map. Evaluation summary step allows users to enter evaluation data after seeing the patient in clinicals.

Concept Map-Based Formative Assessment of Students' Structural Knowledge Alla Anohina-Naumeca, 2019-04-25 The modern knowledge-based economic model demands highly qualified specialists who are capable of solving complex problems and seeing relationships between phenomena, events, and objects. This book highlights the development of the structural knowledge of university students as a necessary precondition for preparing labour market experts, as it facilitates significant cognitive processes, effective problem solving and expert-level performance. The volume considers structural knowledge as an object that should be regularly assessed and further developed in the formative assessment process by using concept mapping as an assessment instrument. It describes concept mapping, the theoretical foundations of structural knowledge, and its formative assessment, and provides a set of practical scenarios validated in instructional practice. It is intended primarily for the administrative and educational staff of higher education institutions who wish to

improve the quality of education with the aim of bringing students' structural knowledge closer to experts' knowledge, and thus ensuring better preparation of students for their professional activities.

Concept Mapping as an Assessment Tool for Conceptual Understanding in Mathematics Haiyue JIN, 2022-05-05 This book investigates the practicability and effectiveness of the concept map as a tool for assessing students' conceptual understanding in mathematics. The author first introduces concept mapping and then employs it to investigate students' conceptual understanding of four different mathematical topics. Alongside traditional scoring methods, she adopts Social Network Analysis, a new technique, to interpret student-constructed concept maps, which reveals fresh insights into the graphic features of the concept map and into how students connect mathematical concepts. By comparing two traditional school tests with the concept map, she examines its concurrent validity and discusses its strengths and drawbacks from the viewpoint of assessing conceptual

understanding. With self-designed questionnaires, interviews, and open-ended writing tasks, she also investigates students and teachers' attitudes toward concept mapping and describes the implications these findings may have for concept mapping's use in school and for further research on the topic. Scholars and postgraduate students of mathematics education and teachers interested in concept mapping or assessing conceptual understanding in classroom settings will find this book an informative, inspiring, and overall valuable addition to their libraries.

Introduction to Concept Mapping in Nursing Patricia

Schmehl, 2014 Introduction to Concept Mapping in Nursing provides the foundation for what a concept map is and how to create a map that applies theory to practice. This excellent resource addresses how students will think about applying nursing theory as it relates to concept mapping. This book is unique because it focuses on a broad application of concept mapping, and ties concept mapping closely to critical thinking skills. Furthermore, this book will prepare nursing students to learn how to map out care plans for patients as they talk

with patients. **Key Features & Benefits*** Demonstrates how students can think through every aspect of care by using compare and contrast tactics, critical thinking skills, and experiences a nursing student may encounter * Includes thought-provoking questions to guide the reader through the text * Provides a section on nursing theory complete with exercises and rationales that include concept maps so that students can understand how theory is applied to practice* Written for students with various learning styles, so a broad range of learning activities are included to help readers understand the material

Concept Map Ananta Kumar Jena, 2013 A valuable book for teacher, teacher educators and researchers to carry on a research project on concept mapping. We all know how to do teach and experiment in science teaching by actually doing it, but a great deal of time and effort may be wasted due to our inadequate preparation. This book provides beginner researchers on how to experiment with concept map. It helps the teacher, teacher educator, and researchers to carry on a research project on concept mapping in their science classroom situation. Collaboration and cooperation among the learners and its result we can find in this book. Concept map a new meanings can be obtained by asking questions and getting clarification of relationship between old concepts and new concepts. This work was a great donation of Joseph D. Novak of Cornell University and to the world of education.

Effectiveness of Concept Mapping in Terms of Understanding Concepts of English Grammar Kiran Dammani, 2021-02-04 Academic Paper from the year 2021 in the subject Didactics - English - Grammar, Style, Working Technique, , language: English, abstract: In the present experimental study, an attempt was made to study the effectiveness of the Concept Mapping Strategy In terms of Understanding Concepts of English Grammar. Concept mapping is the strategy employed to develop a concept map. It is a graphical tool for organizing and representing knowledge. Concept Maps include concepts, usually enclosed in circles or boxes of some type, and relationships between concepts indicated by a connecting line linking two concepts. Words on the line referred to as linking words or linking phrases, specify the relationship between the two concepts. The most important characteristic of a concept map is that the concepts are represented in a hierarchical fashion with the most inclusive, most general concepts at the top of the map and the more specific, less general concepts arranged hierarchically below. The concept map may pertain to some situation or event that one is trying to understand through the organization of knowledge in the form of a concept map, thus providing the context for the concept map. Another important characteristic of a concept map is the inclusion of cross-links. These are relationships or links between concepts in different segments or domains of the concept map. For the present study, a Non-equivalent Control Group Design was employed. Sample of 81 students of class VIII studying in the academic year 2010-11 was selected, using a Random sampling technique for teaching selected concepts of English Grammar. The intact groups as existed in the schools were taken for experimentation. One of the groups was taught English grammar Concepts through the Concept Mapping Strategy

the other group was taught the same concepts using the Lecture Method. The treatment continued for 17 days at a rate of 40 minutes per day. The data were analyzed using ANCOVA.

The concept map as a learning tool. Improvement of students' motivation to learn English literature Willie Nelson Ubie, 2015-08-20 Master's Thesis from the year 2011 in the subject English - Pedagogy, Didactics, Literature Studies, grade: 3.33 (B+), , course: Teaching English As Second Language, language: English, abstract: The thought of teaching English literature has been the main concern for many English teachers as they are not trained to teach literature in schools. In relation to this, students are not motivated to learn literature. The study investigated the effect of using concept maps as a learning tool on students' motivation to learn English literature. Seventy students from a secondary school in a rural area of Sarawak participated in this study. The research design used was a pre- and post-test quasi-experimental design method. Data were gathered on students' learning achievements in both pre-tests and post-tests for two different topics (Characters and Moral Values) in the short stories which were taught as part of the literature component and students' perception on motivation in using concept maps by using Students' Motivation Questionnaire (SMQ) with a reliability coefficient of 0.911. A t-test, descriptive statistics, and one-way ANOVA statistical techniques were used to analyze the data. The findings suggested that students taught using concept maps being one of the teaching and learning tools had a higher level of motivation and obtained a significantly higher mean score on pre-test compared to post-test (Characters). The findings further indicated that following the familiarization program, there is no significant difference between male and female students for the first topic (Characters) but showed a

significant difference in the second topic, Moral Values ($t = 2.10$; p
