References no. 25162-28495 / ABD-ZVE Zdenek Sesták, J. Catský, 2013-12-18 The bibliography includes papers in all fields of photosynthesis research - from studies of model biochemical and biophysical systems of the photosynthesis mechanism to primary production studied by the so-called growth analysis. In addition to papers devoted entirely to photosynthesis, papers on other topics are included if they contain data on photosynthetic activity, photorespiration, chloroplast structure, chlorophyll I and carotenoid synthesis and destruction; etc., or if they contain valuable methodological information (measurement of selected environmental factors, leaf area, etc.). In many branches it has been very difficult to define the limits of interest for photosynthesis researchers. This problem has arisen e. g. in topics dealing with the transport of gases, where- in addition to the papers on CO transfer- some papers on water vapour transfer are included, these being of general application. On the other hand, many papers dealing with the anatomy and physiology of stomata have been omitted, if the aspect of carbon dioxide or water vapour exchange has not been discussed. This volume contains references to papers published in the year 1976, and, similarly to Vol. 6, also addenda including references published in the preceding period (i. e. 1966- 1975). The numbers of these additional references are labelled with an asterisk in the list of references.
