Michelle Trowell

Submarines & Deep-sea Vehicles J. J. Tall, 2002 The submarine has progressed from the crude, steam-driven craft of the American Civil War to silent nuclear machines that can cruise for months underwater without surfacing. *Submarines & Deep-Sea Vehicles* traces the history of these vessels, starting with the earliest submersible craft, right up to the stealthy nuclear giants of the modern age. Ranging from the military stealth submarines of the Cold War, to biological research vessels, to the latest remotely operated machines, *Submarines & Deep-Sea Vehicles* is a stunningly illustrated guide to the exploration of our greatest frontier -- the fascinating world under the ocean.

The Eternal Darkness Robert D. Ballard, Will Hively, 2000 Until a few decades ago, the ocean depths were almost as mysterious and inaccessible as outer space. Oceans cover two-thirds of the earth's surface with an average depth of more than two miles--yet humans had never ventured more than a few hundred feet below the waves. One of the great scientific and archaeological feats of our time has been finally to cast light on the eternal darkness of the deep sea. This is the story of that achievement, told by the man who has done more than any other to make it possible: Robert Ballard. Ballard discovered the wreck of the Titanic. He led the teams that discovered hydrothermal vents and black smokers--cracks in the ocean floor where springs of superheated water support some of the strangest life-forms on the planet. He was a diver on the team that explored the mid-Atlantic ridge for the first time, confirming the theory of plate tectonics. Today, using a nuclear submarine from the U.S. Navy, he's exploring the ancient trade routes of the Mediterranean and the Black Sea for the remains of historic vessels and their cargo. In this book, he combines science, history, spectacular illustrations, and first-hand stories from his own expeditions in a uniquely personal account of how twentieth-century explorers have pushed back the frontiers of technology to take us into the midst of a world we could once only guess at. Ballard begins in 1930 with William Beebe and Otis Barton, pioneers of the ocean depths who made the world's first deep-sea dives in a cramped steel sphere. He introduces us to Auguste and Jacques Piccard, whose Bathyscaphe descended in 1960 to the lowest point on the ocean floor. He reviews the celebrated advances made by Jacques Cousteau. He describes his own major discoveries--from sea-floor spreading to black smokers--as well as his technical breakthroughs, including the development of remote-operated underwater vehicles and the revolutionary search techniques that led to the discovery and exploration of the Titanic, the Nazi battleship Bismarck, ancient trading vessels, and other great ships. Readers will come away with a richer understanding of history, earth science, biology, and marine technology--and a new appreciation for the remarkable men and women who have explored some of the most remote and fascinating places on the planet.

Super Subs David Jefferis, 2002 Our planet is 70% water, much of it unknown. *Super Subs* explores the latest machines and the people that help reveal the secrets of the oceans. Fascinating topics include submarines and rescue apparatus, scuba diving, wreck hunters, underwater construction, and living underwater.

Deep, Dark and Dangerous Vickie Jensen, 2022-04-19 How British Columbia became an international hotspot for submarines, submersibles, Newtsuits, underwater robotics, Arctic sonar and a host of other cutting-edge undersea technologies. In *Deep, Dark & Dangerous*, maritime historian Vickie Jensen explores the fascinating story of British Columbia's rise to become a world leader in the underwater tech industry. She profiles both trailblazing innovators and newcomers to the field, and traces BC's colourful history and bright future as a front runner in the world of subsea technology innovation. This little-known saga began in the early 1960s. Two commercial hard-hat divers from the Vancouver area, Don Sorte and Al Trice, realized that they needed a small manned submersible with robot arms for deep-sea work. They couldn't find one to buy, so they decided to partner with machinist Mack Thomson and build their own. Experts told them it would be suicidal to try a home-made version, but just over two years and \$100,000 later, their Pisces I was successfully making two-thousand-foot dives. They formed International Hydrodynamics, which went on to build fourteen submersibles and produce a generation of experts that would launch an entire industry of subsea companies in BC. During the same period, Phil Nuytten went from opening Vancouver's first scuba shop as a teenager to becoming a commercial diver and starting his undersea construction company at age twenty-five. Now, Nuytten is best known for his atmospheric diving suits, Newtsuit and Exosuit, along with a series of submersibles for scientific research. Drawing on her background in documenting both history and industry, Jensen uncovers the stories of over forty subsea pioneers, both historical and current, and details the innovations that are responsible for BC's remarkable and continuing subsea reputation. Written with colour and flair, this is a fascinating and exciting story that anyone can enjoy.

Opening the Great Depths Norman C Polmar, Lee J Mathers, 2021-05-15 Developed by French physicist Auguste Piccard and his son Jacques, the bathyscaphe Trieste was a scientific marvel that allowed unprecedented scientific, technical, and military feats in the ocean depths. France and the United States both acquired and subsequently developed variants of the original bathyscaphe. While both France and the United States employed the bathyscaphe as a tool for scientific investigation of the deepest ocean depths, the U.S. Navy developed and employed the Trieste for military missions as well. From its earliest years, participants in the Trieste program realized that they were making history, blazing a trail into previously unexplored and unexploited depths, developing new capabilities and opening a new frontier. Comparisons with developments in space and the space-race between the United States and the Soviet Union often were made concerning the Trieste program and contemporary developments in undersea technologies and capabilities. The Trieste opened the entire oceans to exploration, exploitation, and operations. The bathyscaphe was a first-generation system, a Model-T that spawned an entirely new industry and encouraged new concepts for deep-ocean naval operations. Advances in deep-sea technologies lacked the gee-whiz factor of the concurrent space race, but were highly significant in the development of new technology, new knowledge, and new military capabilities. *Opening the Great Depths* is the story of the three Trieste deep-ocean vehicles, their officers and enlisted men, and the civilians, often told in their own words, documenting for the first time the earliest years of humanity's probing into Earth's final frontier.

Men Under the Sea Edward Ellsberg, 2014-06-24 "Ellsberg's writings chronicled his experiences and attitudes on the topic of marine salvage in a manner which has no equal in naval literature." —War History Online Commander Edward Ellsberg rose to fame after leading the harrowing effort to raise the sunken submarine S-51 just off Long Island. That is where he begins *Men Under the Sea*, his tribute to and history of the men who risk everything to plunge into the blackness of the deep sea. Ellsberg holds an expert's knowledge of deep-sea salvage, and that knowledge has put him repeatedly on the front lines of some of the world's worst wrecks. After the S-51, Ellsberg goes on to the heartrending tale of the sinking of the submarine S-4, which sank after a collision with forty sailors aboard. Commander Ellsberg races to the scene through land, air, and sea to search for potential survivors trapped aboard the sunken sub. Ellsberg also regales readers with stories of some of the most famous underwater missions in history, such as men submerging deep to recover £5 million worth of gold from the wreck of the *Laurentic*, bringing vast treasures from the ocean bottom, and diving to rescue thirty-three survivors from the stricken submarine *Squalus*. Ellsberg's passion, experience, and natural narrative talent turn *Men Under the Sea* into an unforgettable voyage.

The Incredible Submersible Alvin Discovers a Strange Deep-sea World Bradford Matsen,2003 Describes the 1977 journey of the submersible ship Alvin, in which three explorers saw, for the first time, the strange marine life that dwells in hydrothermal vents and other mysteries of the deep sea. Inside the deep-diving submersible Alvin, three scientists peered out the portholes. Thousands of feet below the ocean's surface, Alvin continued its descent. Electric fans hummed and the green lights of the instrument dials glowed. Near a ridge on the sea floor, the crew spotted something in the searchlight! Isn't the deep ocean supposed to be like a desert? the pilot asked. Yes, replied the controller. The surprised pilot said, Well, there's all these animals down here. New forms of life had been discovered! Journey to the deepest reaches of the ocean to examine hydrothermal vents and the mysterious black smokers. Take a dive with Alvin and learn about Alvin's construction, the skillful pilots who control the sub, and the many advances it has made to further our knowledge of ocean life.

Good Night Submarines Adam Gamble,Mark Jasper,2022-06-14 Little submarine enthusiasts will squeal with delight as they plunge to the deepest depths of the sea aboard a mighty sub. This beautifully illustrated board book features naval subs such as the Ohio, Seawolf, and Los Angeles vessels, the submarine control room, submarine crew, deep-sea submergence vehicles, deep-submergence rescue vehicles, recreational submarines, and more. This book is part of the bestselling Good Night Our World series, which includes hundreds of titles exploring iconic locations and exciting themes. Good Night Submarines takes young readers on an unforgettable journey below the sea.

Extreme Submarines Ian F. Mahaney,2015-07-15 Readers enter the underwater world of extreme submarines with this text, which offers a high-interest take on the career, technology, and engineering curricula in elementary classrooms. Readers learn the basics of submarine technology and how submarine crews live inside the machine. The text examines the ways in which submarines are used, including civilian and military missions, and how they escape detection in the deepest depths of the oceans. Familiar submarines, such as the Deepsea Challenger and those used in the U.S. Navy, are examined in-depth. Colorful photographs bring extreme submarines to life, while fact boxes and sidebars offer opportunities for additional learning.

Operation Rising Sun David W. Jourdan,2020-06 In 1944 Allied codebreakers learned the Imperial Japanese Navy had dispatched the cargo submarine I-52 to occupied France with tons of military supplies and payment—in gold—for German assistance. I-52 undertook the mission as part of the Yanagi missions, a military program meant to alleviate Japan’s desperate need for military material and technical knowledge. After tracking I-52 from Asia to the Atlantic, the Allies destroyed the vessel in a battle that ended the Yanagi missions and left I-52 an unlikely treasure ship on the seafloor. David W. Jourdan adds to the history of I-52 with a spellbinding account of his efforts to find the sunken submarine. One of the first joint American-Russian research expeditions, the search for the wreck combined a team effort, exhaustive detective work, and a dramatic battle with the sea. The effort paid off when the group found I-52’s nearly intact hull three miles down. The expedition also earned an unexpected historical dividend when it uncovered one-of-a-kind recordings of American Avenger torpedo bomber attacks on an enemy submarine. Part war tale and part seagoing adventure, Operation Rising Sun tells the story of the two very different missions to find submarine I-52.

Submarine Canyons: Human Connections to the Deep Sea Awantha Dissanayake,Veerle Ann Ida Huvenne,Jaime Selina Davies,Kostas Kiriakoulakis,2023-11-27 Submarine canyons are some of the most prominent features of the world’s continental margins creating heterogeneity in the terrain, influencing local and global hydrodynamics and often creating hotspots of biodiversity, both on the seafloor and in the water column. Canyon morphology and location on the margin make them the main conduits between the shelf and the deep sea, focussing the transport of sediments, organic matter, nutrients, and increasingly pollutants and litter. The focus of this Research Topic is highlighting human connections to the deep sea. Previous studies have underlined the need for a better understanding of anthropogenic impacts on submarine canyons, and how they fast-track our human footprint to the deep sea. Besides a better assessment of the extent and nature of human activities in submarine canyons, it primarily requires a holistic understanding of submarine canyons as systems, governed by the interplay of geological, sedimentological, oceanographic and biological processes. The goal of this Research Topic, based on the recent INCISE2021 International Symposium on Submarine Canyons, aims to fill that gap by gathering the latest observations of human activities in submarine canyons, the latest insights in submarine canyon functioning, and the latest interpretations on how the two are influencing each other.
