The Milne Papers John Beeler,2020-11-25 Alexander Milne was the pre-eminent naval administrator of the Victorian Royal Navy, spending eighteen years at the Admiralty between 1847 and 1876, over six of them as First Naval Lord. His administrative career coincided exactly with the greatest technological upheaval in warfare at sea since sails supplanted oars, and he played an important role in almost every step of the Navy's transformation from sail to steam, wood to iron, and in the equally critical processes of devising a modern system of recruiting and training enlisted personnel, and evolving a coherent strategy suitable for a steam-powered fleet. This collection is drawn from a rich documentary record of Milne's and the Board's labours during the late 1840s and 1850s. It also encompasses Milne's earlier sea service, furnishing a unique glimpse of the maritime policing operations of the Navy during the Pax Britannica.

Polarized Light and Optical Systems Russell A. Chipman,Wai Sze Tiffany Lam,Garam Young,2018-07-16 Polarized Light and Optical Systems presents polarization optics for undergraduate and graduate students in a way which makes classroom teaching relevant to current issues in optical engineering. This curriculum has been developed and refined for a decade and a half at the University of Arizona's College of Optical Sciences. Polarized Light and Optical Systems provides a reference for the optical engineer and optical designer in issues related to building polarimeters, designing displays, and polarization critical optical systems. The central theme of Polarized Light and Optical Systems is a unifying treatment of polarization elements as optical elements and optical elements as polarization elements. Key Features Comprehensive presentation of Jones calculus and Mueller calculus with tables and derivations of the Jones and Mueller matrices for polarization elements and polarization effects Classroom-appropriate presentations of polarization of birefringent materials, thin films, stress birefringence, crystal polarizers, liquid crystals, and gratings Discussion of the many forms of polarimeters, their trade-offs, data reduction methods, and polarization artifacts Exposition of the polarization ray tracing calculus to integrate polarization with ray tracing Explanation of the sources of polarization aberrations in optical systems and the functional forms of these polarization aberrations Problem sets to build students' problem-solving capabilities.
