**Socio Economic Impact of Type II Diabetes Mellitus** Saima Nazir,Arshad Rashid,Ashiq Mir,2019-04-15 India will face one of the toughest struggles against diabetes in the region and will be the largest contributor to regional mortality with 9,83,000 deaths attributable to diabetes. Type-II diabetes mellitus (DM) is a major public health problem with more than 471 billion USD spent on healthcare for diabetes. The WHO predicts DM to become the seventh leading cause of death in the world by 2030.

An estimated 3.4 million people have died from the consequences of high blood sugar in 2004. Out of all the deaths caused by DM, 80% of them occur in low and middle-income countries. DM is an expensive disease as per capita cost of managing the disease is 2-4 folds higher than the non-diabetics. Treatment costs increase with disease duration, presence of complications, hospitalization and urban settings. Healthcare expenditures on diabetes accounted for 11.6% of the total healthcare expenditure in the world in 2010. By 2030, this amount will exceed USD 490 billion. The direct cost on diabetes healthcare is usually very high for people in developing countries. Present study focuses on studying economic impact of DM in urban and rural field practice area of Sri Siddhartha medical college and examining of the financial coping mechanisms. OBJECTIVES: 1.To estimate the total expenditure incurred by Diabetics and its socio economic impact on their families. 2.To estimate the magnitude of Catastrophic Hospital Expenditure (CHE) due to type-II Diabetes Mellitus. 3. To assess the financial coping mechanisms of households with Type-II Diabetes mellitus. MATERIALS AND METHODS: The cross sectional study was conducted in urban and rural field practice areas of Sri Siddhartha Medical College in Tumkur. 180 study subjects each from urban and rural field practice area were included in the study and systematic random sampling method was used to include the study subjects. RESULTS: Mean total diabetic expenditure was higher among urban study subjects at 778 rupees per month while it was lesser among the rural study subjects which was 285 rupees per month. This was statistically significant. Total monthly indirect diabetic expenditure was higher among urban population (190 rupees) as compared to rural study subjects who spend around 145 rupees. This was also statistically significant. Catastrophic hospital expenditure was experienced by 27 % of study subjects, higher in urban area (30%) than rural area (24%). **Rethinking Diabetes** Gary Taubes, 2024-01-02 An eye-opening investigation into the history of diabetes research and treatment by the award-winning journalist and best-selling author of *Why We Get Fat* • [Gary] Taubes's meticulous, science-based work makes him the Bryan Stevenson of nutrition, an early voice in the wilderness for an unorthodox view that is increasingly becoming accepted.—Niel Barsky, *The Guardian* Before the discovery of insulin, diabetes was treated almost exclusively through diet, from subsistence on meat, to reliance on fats, to repeated fasting and near-starvation regimens. After two centuries of conflicting medical advice, most authorities today believe that those with diabetes can have the same dietary freedom enjoyed by the rest of us, leaving the job of controlling their disease to insulin therapy and other blood-sugar-lowering medications. Rather than embark on “futile” efforts to restrict sugar or carbohydrate intake, people with diabetes can lead a normal life, complete with the occasional ice-cream cake, side of fries, or soda. These guiding principles, however, have been accompanied by an explosive rise in diabetes over the last fifty years, particularly among underserved populations. And the health of those with diabetes is expected to continue to deteriorate inexorably over time, with ever-increasing financial, physical, and psychological burdens. In *Rethinking Diabetes*, Gary Taubes explores the history underpinning the treatment of diabetes, types 1 and 2, elucidating how decades-old research that is rife with misconceptions has continued to influence the guidance physicians offer—at the expense of their patients' long-term well-being. The result of Taubes's work is a reimagining of diabetes care that argues for a recentering of diet—particularly, fewer carbohydrates and more fat—over a reliance on insulin. Taubes argues critically and passionately that doctors and medical researchers should question the established wisdom that may have enabled the current epidemic of diabetes and obesity, and renew their focus on clinical trials to resolve controversies that are now a century in the making.
