World Report on Road Traffic Injury Prevention Organisation mondiale de la santé,Peden M.,World Health Organization,World Bank,Scurfield R.,Sleet D.,C. Mathers,E. Jarawan,A. A. Hyder,Mohan D.,Hyder A. A.,Jarawan E.,2004-03-23 Every day, thousands of people are killed and injured on roads around the world, with the costs of this growing, but largely preventable, public health concern disproportionately affecting vulnerable social groups and developing countries. In order to address these issues, the World Health Organization and the World Bank have produced this joint report on road traffic injury prevention, based on the collaborative contributions of experts and institutions, from all continents and different sectors, including transport, engineering, health, police, education and civil society. It presents a comprehensive overview of the magnitude, risk factors and impact of road traffic injuries, and about ways to prevent and lessen the impact of road crashes.

Accidental Injury Narayan Yoganandan,Alan M. Nahum,John W. Melvin,The Medical College of Wisconsin Inc,2014-11-17 This book provides a state-of-the-art look at the applied biomechanics of accidental injury and prevention. The editors, Drs. Narayan Yoganandan, Alan M. Nahum and John W. Melvin are recognized international leaders and researchers in injury biomechanics, prevention and trauma medicine. They have assembled renowned researchers as authors for 29 chapters to cover individual aspects of human injury assessment and prevention. This third edition is thoroughly revised and expanded with new chapters in different fields. Topics covered address automotive, aviation, military and other environments. Field data collection; injury coding/scaling; injury epidemiology; mechanisms of injury; human tolerance to injury; simulations using experimental, complex computational models (finite element modeling) and statistical processes; anthropomorphic test device design, development and validation for crashworthiness applications in topics cited above; and current regulations are covered. Risk functions and injury criteria for various body regions are included. Adult and pediatric populations are addressed. The exhaustive list of references in many areas along with the latest developments is valuable to all those involved or intend to pursue this important topic on human injury biomechanics and prevention. The expanded edition will interest a variety of scholars and professionals including physicians, biomedical researchers in many disciplines, basic scientists, attorneys and jurists involved in accidental injury cases and governmental bodies. It is hoped that this book will foster multidisciplinary collaborations by medical and engineering researchers and academicians and practicing physicians for injury assessment and prevention and stimulate more applied research, education and training in the field of accidental-injury causation and prevention.

Alcohol, Cocaine, and Accidents Ronald R. Watson,2012-12-06 In Alcohol, Cocaine, and Accidents leading experts provide concise yet focused scientific reviews of the role of alcohol and cocaine in automotive, aviation, and aquatic accidents. The authoritative contributors present both applied research and epidemiological studies, with emphasis on the prevention of injuries through an increased use of appropriate educational labels, law enforcement, and personal and community-based prevention programs. In addition to detailed topical coverage, the articles suggest prevention strategies and provide supporting data for the role of treatment in reducing accidents. Alcohol, Cocaine, and Accidents will be of interest to substance abuse researchers, law enforcement officials, treatment providers, policy makers, and legislators responsible for regulating alcohol and drug use, as well as safety issues in all areas of transportation.

Accidents in History ,2020-01-29 There is now an extensive literature on the social and environmental consequences of living in the risk society. Studies of trauma are also increasingly prominent. But scant attention has been paid to perceptions of risk and danger in the past — in particular, to the history of accidents and the meanings of the accidental. This collection of interdisciplinary essays addresses this lacuna providing a theoretically informed historical sociology of the accident and risk. It explores the social and cultural contexts in which ‘acts of God’, calamities, catastrophes, disasters, injuries, casualties, and other category of ‘mishaps’ were experienced, conceptualized and responded to. Drawing on the skills of British, European and North American scholars, Accidents in History combines philosophical, sociological and ecological overviews with in-depth historical case-studies. It spans the period from the eighteenth century to the present, probing the epistemological, social and political roots of the accidental. The authors differentiate between industrial and other forms of injury; trace the origins of the normalization of accidents; and analyze the interactions and gendered discrepancies between domestic and non-domestic mishaps. They also investigate the medicalization of sudden injury, and discuss the emergence of new socio-medical and humanitarian discourses around the organization of relief for victims.
