**Photovoltaic Sizing Calculator** Evette Copus,2021-03-19 To figure out how to size your solar system, take your daily kWh energy requirement and divide it by your peak sun hours to get the kW output. Then divide the kW output by your panel's efficiency to get the estimated number of solar panels you'll need for your system. This book will give you: Photovoltaic Sizing Calculator: How Do You Calculate Generation Of Electricity? Sizing Of Hybrid Photovoltaic-Wind Energy Systems: What Size Solar Pv Do I Need? Hydro-Electric Turbines Simulation and Optimization Joseph Nowarski,2017-01-27 This work introduces hydroelectric power plant optimization method. The paper also includes some background information used for preparation of Hydro-Electric Energy On-line Calculator, as on site: <http://www.geocities.ws/nowarski/calculators/Hydro.html> The calculator is for general information only; it does not include many components and must not be used for actual design, economic evaluation, or decisions regarding any real project. In addition, the calculator applies Francis turbine efficiency curve formula which is specific for this work and for the calculator and cannot be used for other turbines. The calculator is applied in this work for simulation of the hydroelectric power plant electricity export and for optimization of turbine size. Estimation of amount of electricity which will be generated and exported from hydroelectric plant is the most important step in decision taking process regarding the hydro project. The amount of electricity exported from the hydroelectric plant will be much lower than the nominal power of the turbine considering 24 hours a day and 365 days a year. The optimization using this online calculator allows determination of optimum turbine size for various patterns of the available water flow. The optimization includes energy and economic considerations. From the energy point of view, the aim of the optimization is to find the turbine power, which results in highest net electricity export. From the economic point of view, the aim of the optimization is to find the turbine power that results in highest net income. Application of the calculator for simulation and optimization can significantly save investment cost of the project and increase net profit.

*Electrical Installation Calculations: Advanced* A.J. Watkins,2009-10-26 Designed to provide a step-by-step guide to successful application of the electrical installation calculations required in day-to-day electrical engineering practice, the Electrical Installation Calculations series has proved an invaluable reference for over forty years, for both apprentices and professional electrical installation engineers alike. Now in its seventh edition, Volume 2 has been fully updated in line with the 17th Edition IEE Wiring Regulations (BS 7671:2008) and references the material covered to the Wiring Regs throughout. The content meets the requirements of the 2330 Level 3 Certificate in Electrotechnical Technology from City & Guilds and will also prove a vital purchase for those undertaking Level 3 NVQs in Electrotechnical Services. Essential calculations which may not necessarily feature as part of the requirements of the syllabus are retained for reference by professional electrical installation engineers based in industry, or for those students wishing to progress to higher levels of study. The book's structure and new design make finding the required calculation easy. Key terms are explained in a glossary section and worked examples and exercises are included throughout the text to maximise accessibility of the material for the reader. A complete question and answer section is included at the back of the book to enable readers to check their understanding of the calculations presented. Also available: Electrical Installation Calculations Volume 1, 8th edn, by Watkins & Kitcher- the basic calculations required for electrical installation work, and Level 2 study and apprenticeships.

Electrical Circuit Analysis Using the TI-85 Or TI-86 Richard Aston, 2000 For courses in DC/AC Circuits. Innovative in approach, this text uses the hand-held programmable graphing calculator as both a calculating tool and a pedagogical tool to teach students how to do classical circuit analysis and how to make mathematical models of electrical networks that can be programmed on the TI-85 or 86. Introduces a generic method that is compatible with any mathematical computer program, e.g., MathCAD. This unique approach allows students to spend time writing programs that can actually be used, and to make computer studies of large circuits specified by R, L, C elements rather than getting bogged down by tedious calculations.
