Death on Ireland's Eye Dean Ruxton,2022-02-10 A tragic death, a murder trial and a 170-year-old mystery – but what really happened? Shortly after Maria Kirwan died in a lonely inlet on Ireland's Eye, it was decided that she had drowned accidentally during a day spent with her husband on the picturesque island. This inquest verdict appeared to conclude the melancholy events that consumed the fishing village of Howth, Co Dublin, in September 1852. But not long afterwards, suspicion fell upon Maria's husband, William Burke Kirwan, as whispers of unspeakable cruelty, an evil character and a secret life rattled through the streets of Dublin. Investigations led to William's arrest and trial for murder. The story swelled into one of the most bitterly divisive chapters in the dark annals of Irish criminal history. Yet questions remain: Does the evidence stand up? What role did the heavy hand of Victorian moral outrage play? Was William really guilty of murder, or did the ever-present 'moral facts' fill in gaps where hard proof was absent? Now, this compelling modern analysis revisits the key evidence, asking sober questions about the facts, half-facts and fantasies buried within the yellowed pages of the Ireland's Eye case files.

Sensitivity of Mangrove Ecosystem to Changing Climate Abhijit Mitra,2013-08-13 Mangroves are basically salt tolerant forest ecosystems found mainly in tropical and sub-tropical inter-tidal regions. Till about 1960s, mangroves were largely viewed as “economically unproductive areas” and were therefore destroyed for reclaiming land for various economic and commercial activities. Gradually, with the passage of time, the economic and ecological benefits of mangroves have become visible and their importance is now well appreciated. Today, mangroves are observed in about 30 countries in tropical subtropical regions covering an area of about 99,300 Sq.Km. However, during the past 50 years, over 50% of the mangrove cover has been lost, mainly because of the increased pressure of human activities like shrimp farming and agriculture, forestry, salt extraction, urban development, tourist development and infrastructure. Also, dam on rivers, contamination of sea waters caused by heavy metals, oil spills, pesticides and other products etc. have been found to be responsible for the decline of mangroves. Although the temperature effect on growth and species diversity is not known, sea-level rise may pose a serious threat to these ecosystems The present book addresses all these important issues in separate chapters with some interesting case studies whose data may serve as pathfinder for future researches in the sphere of the influence of climate change on mangrove ecosystem. The role of mangroves in the sector of bioremediation is a unique feather in the crown of this coastal and brackishwater vegetation that may be taken up by the coastal industries in order to maintain the health of ambient environment. This book seeks to discover and to assess the vulnerability of climate change on mangrove flora and fauna, their role in carbon sequestration and some interesting case studies by some groups of dedicated researchers that may serve as the basis of future climate related policies.

Mangrove Forests in India Abhijit Mitra,2019-06-27 This is the first comprehensive science-based primer to highlight the unique ecosystem services provided by mangrove forests, and discuss how these services preserve the livelihoods of coastal populations. The book presents three decades of real-time data on Sundarbans and Bhitarkanika mangroves in India measuring carbon and nitrogen sequestration, as well as case studies that demonstrate the utility provided by mangroves for reducing the impact of storms and erosion, providing nutrient retention for complex habitats, and housing a vast reservoir of plant, animal and microbial biodiversity. Also addressed is the function of mangroves as natural ecosystems of cultural convergence, offering the resources and products necessary for thriving coastal communities. The book will be of interest to students, academics and researchers in the fields of oceanography, marine biology, botany, climate science, ecology and environmental geography, as well as consultants and policy makers working in coastal zone management and coastal biodiversity conservation.

Hurricanes Michael Woods,Mary B. Woods,2007-01-01 Explains why hurricanes occur, how we prepare for them and also examines the history of some of the most famous.

Medical Toxicology of Natural Substances Donald G. Barceloux,2012-03-07 Interest and information in the field of medical toxicology has grown rapidly, but there has never been a concise, authoritative reference focused on the subjects of natural substances, chemical and physical toxins, drugs of abuse, and pharmaceutical overdoses. Medical Toxicology of Natural Substances finally gives you an easily accessible resource for vital toxicological information on foods, plants, and animals in key areas in the natural environment.

Spirals and Vortices Kinko Tsuji,Stefan C. Müller,2019-04-04 This richly illustrated book explores the fascinating and ubiquitous occurrence of spirals and vortices in human culture and in nature. Spiral forms have been used as elements in the arts for thousands of years, whereas their role in nature and science – from DNA and sea shells to galaxies – is still a topic of investigation in numerous fields. Following an introduction to the cultural history of spiral forms, the book presents contributions from leading experts, who describe the origins, mechanisms and dynamics of spirals and vortices in their special fields. As a whole the book provides a valuable source of information, while also taking the reader on an aesthetic and scientific journey through the world of spiral forms.

Morvern Transformed Philip Gaskell,1980-05-22 Dr Gaskell's pioneering study of social and economic change in a west Highland parish during the last century has come to be regarded as a classic of local history, a book which raises issues that are still of general and indeed of national importance. But *Morvern Transformed* is more than a study of history: it is (to quote Professor R. H. Campbell's new Introduction) 'a fascinating portrayal of a way of life which, only a century old, is already as different from the present as it was in its own day from the way of life another century before.'

Island Bats Theodore H. Fleming,Paul A. Racey,2010-03-15 The second largest order of mammals, Chiroptera comprises more than one thousand species of bats. Because of their mobility, bats are often the only native mammals on isolated oceanic islands, where more than half of all bat species live. These island bats represent an evolutionarily distinctive and ecologically significant part of the earth's biological diversity. *Island Bats* is the first book to focus solely on the evolution, ecology, and conservation of bats living in the world's island ecosystems. Among other topics, the contributors to this volume examine how the earth's history has affected the evolution of island bats, investigate how bat populations are affected by volcanic eruptions and hurricanes, and explore the threat of extinction from human disturbance. Geographically diverse, the volume includes studies of the islands of the Caribbean, the Western Indian Ocean, Micronesia, Indonesia, the Philippines, and New Zealand. With its wealth of information from long-term studies, *Island Bats* provides timely and valuable information about how this fauna has evolved and how it can be conserved.
