THE POLICE OFFICER'S GUIDE TO OPERATING AND SURVIVING IN LOW-LIGHT AND NO-LIGHT CONDITIONS

Tony L. Jones, 2002-01-01 The majority of crimes occur during the hours of darkness, and fully two-thirds of all shooting incidents in which police officers on duty are killed take place during hours of diminished light. The goal of this unique book is to increase officers' awareness that training in low-light and no-light conditions is necessary in order for them to prevail in such situations, to help facilitate correct decision making under these conditions, and to help them understand the use of a myriad of illumination tools available for professional use today. Major topics include: (1) dim-light and no-light doctrine, including navigation techniques, threat location, threat acquisition, and threat identification; (2) flashlight doctrine, including many examples of engaging a threat using a flashlight; (3) low-light weapon sighting systems; (4) techniques used for signalling during dim-light and no-light conditions; and (5) illumination technologies supporting tactical and emergency operations, including infrared systems, thermal imagers, night vision systems, strobe lights, and lasers. Through the use of the techniques described throughout this unique and comprehensive book, the skill, professionalism, and ability of police officers to operate and survive in dim-light, no-light, and artificial light conditions will be enhanced

The Best of World SF Lavie Tidhar, 2022-10-13

Twenty-nine new short stories representing the state of the art in international science fiction. The second annual instalment to the 'rare and wonderful' (The Times) The Best of World SF Volume 1, this collection of twenty-nine stories, including eight original and exclusive additions, represents the state of the art in international science fiction. Navigating around the globe, The Best of World SF Volume 2 features writers from Bahrain, Bangladesh, Barbados, Bolivia, Brazil, China, Czech Republic, Greece, Grenada, India, Iraq, Italy, Jamaica, Japan, Korea, Malaysia, Mexico, Nigeria, Pakistan, The Philippines, Poland, Russia, Singapore, Uganda and Zimbabwe. Each story has been selected by World SF expert and award-winning author Lavie Tidhar. Taking us into space – Mars at first, then the stars – and then back to a strange, transformed Earth via AI, gods, aliens and the undead, the collection traces the ever-changing meaning of the genre from some of the most exciting voices writing today. This is not a retrospective of what science fiction around the world used to look like. This is a snapshot of what some of it looks like now. And it's never been more exciting. Reviews for The Best of World SF series: 'We need this anthology, and we need editors like Tidhar' The Times 'Just the start of a whole new game for speculative fiction authors around the world' LA Review of Books 'An excellent, lovingly curated collection' Financial Times 'This wonderful anthology should be a hit with any sci-fi fan' Publishers Weekly 'Tidhar gives a cheerful, fannish introduction to the

stories, drawn from 26 countries on five continents, and encompassing a dizzying range of tones and approaches' The Times 'An outstanding assortment of international sci-fi shorts... a bold and powerful argument for non-Anglophone SF's potential to push the genre's boundaries.'

Optical Inspection of Microsystems, Second Edition Wolfgang Osten, 2019-06-21 Where conventional testing and inspection techniques fail at the microscale, optical techniques provide a fast, robust, noninvasive, and relatively inexpensive alternative for investigating the properties and quality of microsystems. Speed, reliability, and cost are critical factors in the continued scale-up of microsystems technology across many industries, and optical techniques are in a unique position to satisfy modern commercial and industrial demands. Optical Inspection of Microsystems, Second Edition, extends and updates the first comprehensive survey of the most important optical measurement techniques to be successfully used for the inspection of microsystems. Under the guidance of accomplished researcher Wolfgang Osten, expert contributors from industrial and academic institutions around the world share their expertise and experience with techniques such as image processing, image correlation, light scattering, scanning probe microscopy, confocal microscopy, fringe projection, grid and moire techniques, interference microscopy, laser-Doppler vibrometry, digital holography, speckle metrology, spectroscopy, and sensor fusion technologies. They

also examine modern approaches to data acquisition and processing, such as the determination of surface features and the estimation of uncertainty of measurement results. The book emphasizes the evaluation of various system properties and considers encapsulated components to increase quality and reliability. Numerous practical examples and illustrations of optical testing reinforce the concepts. Supplying effective tools for increased quality and reliability, this book Provides a comprehensive, up-to-date overview of optical techniques for the measurement and inspection of microsystems Discusses image correlation, displacement and strain measurement, electro-optic holography, and speckle metrology techniques Offers numerous practical examples and illustrations Includes calibration of optical measurement systems for the inspection of MEMS Presents the characterization of dynamics of MEMS

cameras including the XE, XT, and X Pro series of interchangeable lens cameras, as well as the unique real high speed flash sync capability available in fixed lens X100/S/T leaf shutter cameras. More details can be found at the Friedman Archives Press website.

Collecting Flashlights Stuart Schneider, 1996 Let There Be Light. Borrowing from the bible, the Eveready Co. used this phrase on the cover of its 1899 catalog, along with a hand from the heavens pointing a flashlight at the earth. Those were the beginning years of the flashlight, originally promoted to help sell batteries and growing to become an essential safety product in every American household and automobile. Never before has there been an extensive treatment of the flashlight from an historical and collectible point of view. In this beautifully illustrated full color volume, Stuart Schneider brings a fascinating world to light. With flashlights ranging from the purely practical to the elegantly stylish, to the playthings of children, the reader will begin to appreciate the beauty of their design and their inventiveness. 458 color photographs illustrate the book, each accompanied by an informative caption and the value of the model in today's market. Histories of many companies and important information for collectors is also included.

Keeper of Light and Dust Natasha

Mostert,2009-04-02 Read Natasha Mostert's posts on the Penguin Blog. From the acclaimed author of Season of the Witch comes a supernatural thriller blending magic, science, and martial arts with a unique vampire hunter heroine. Mia Lockhart is descended from Keepers-women who were warriors, healers, and protectors in ancient times. But as Mia practices her craft in South London, she has no idea she is being watched. Adrian Ashton is a brilliant scientist. He is also a skilled martial artist-and a modern-day vampire. He has mastered the art of draining the chi of his opponents-the vital energy that flows through their bodies. And Mia finds herself drawn to his dark genius, though she has given her heart to another... When Ashton targets the man she loves, Mia is forced to choose between them-and the choice results in a fight to the death in which love is both the greatest weakness and the greatest prize.

Speedlights & Speedlites Lou Jones, 2013-06-19 Canon Speedlites and Nikon Speedlights are small, off-camera flashguns that can provide big results - if you know how to use them properly. Acclaimed Boston photographers Lou Jones, Bob Keenan and Steve Ostrowski guide you through the technical and creative aspects of how to get the most out of these powerful tools in this indispensable guide, packed full of inspirational images and comprehensive diagrams of the lighting set ups used to capture them. They are significantly more advanced, lighter and considerably cheaper than a standard flashgun, and have many advantages. They are small (and cheap) enough that a number can be carried in your kit, and they can be used in combination, triggered wirelessly. They use through-the-lens (TTL) metering, which allows you to use the in-camera LCD and histograms to calculate the required power/direction, rather than having to use a light meter or trial and error. They use proprietary, dedicated technology

(from Canon and Nikon) that means there are no compatibility issues. Getting the most out of them, however, remains a mystery - most photographers still just use their speedlights in the same way as a standard flash gun. This is where this book comes in.

Tools and Algorithms for the Construction and Analysis of Systems Stefan Kowalewski, Anna Philippou, 2009-03-09 This book constitutes the refereed proceedings of the 15th International Conference on Tools and Algorithms for the Construction and Analysis of Systems, TACAS 2009, held in York, UK, in March 2009, as part of ETAPS 2009, the European Joint Conferences on Theory and Practice of Software. The 27 full papers and 8 tool demonstrations included in the volume were thoroughly reviewed and selected from 131 submissions. The papers are organized in topical sections on Model Checking, Tools, Verification of Concurrent Programs, Parametric Analysis, Program Analysis, and Hybrid Systems.
