Flight Phase Status Monitor Study ,1984 This report covers Phase II of a study conducted for the FAA to develop flight status monitor (FSM) concepts. Previous studies of crew alerting systems suggested the concept of a system which could monitor a flight, alert the crew to non-normal operation and system conditions, guide the crew through the appropriate response procedures and provide feedback to the crew concerning their actions. Major Phase II activities include: (1) Using the

results of Phase I to refine the FSM system specifications. (2) Finalizing the implementations of the FSM simulator hardware and software. (3) Conducting evaluations of the system with experienced transport pilots. (4) Drawing conclusions and working recommendations concerning an FSM system by using the data developed in the evaluation and identifying issues which need further investigation. Keywords: Caution and warning; Warning systems; Flight status monitor; Human factors; Voice Control; Touch Panel.

Aeromedical Psychology Carrie H. Kennedy, Gary G. Kay, 2017-11-01 Aeromedical psychology is that branch of psychology pertaining to the assessment, selection and evaluation of aviation personnel. This book, *Aeromedical Psychology*, is designed to provide the means for a variety of clinicians to carry out sound assessment and selection procedures, perform informed evaluations and make subsequent recommendations regarding flight status and treatment strategies geared to the aviation environment. To facilitate a dynamic understanding of the field, the book emphasizes an integration of applications and theory, case examples and research. The book is divided into three

parts. The first presents assessment and selection procedures for aviation personnel (i.e. air traffic controllers, flight officers and pilots) and astronauts and the many ways in which both psychologists and psychiatrists are involved in these roles. In the second part, the waiver standards put forth by both the FAA and the various branches of the military are presented, as well as the waiver decision process. Clinical issues unique to aviation - notably fear of flying, motivation to fly and airsickness - are addressed, as well as possible courses of intervention, treatment and disposition. In the final part, more specialized issues pertaining to aeromedical psychology are dealt with, namely the psychopharmacological research and regulations applicable to recreational pilots and aviation personnel, managing the aftermath of aviation mishaps and the psychologist's role in accident investigations.

Status: D.W. Maroney,2019-01-26 No one believed it was possible to commandeer an airliner in flight from a land-based location, then Malaysia Airlines Flight MH370 disappeared over the Indian Ocean, giving rise to The Drone Theory among U.S. intelligence agencies. Since that fateful flight, dozens of other airliners have gone missing without a trace. Is it coincidence? Or is there something sinister at work? The Drone Theory Taskforce has one directive: Determine whether U.S. Top Secret technology—lost when a CIA drone went down in Iran—is being used to hijack airliners in flight, and if so, recover the technology. Air Force Intelligence Officer Major Megan Sloan doesn't believe in coincidences. She's determined to get her hands on the technology and the person(s) responsible for this current reign of terror. When a U.S. Government jet carrying top-level officials to Guam is rerouted mid-flight to Pyongyang, The Drone Theory shifts from supposition to cold, hard reality. The stakes have never been higher. Will they locate the source of the signals controlling the aircraft? Will Major Sloan be in time to recover the technology and return control of the plane to the flight crew before the incident escalates into World War III? Fasten your seatbelt, return your seat back to its full, upright position, and prepare turbulence!
