Drone Flight Tracker Drone Pilots,2019-06-10 Do you own a drone? Then you need a log book. Log each flight confidently and increase your safety, as well as the value of your drone. This log book is the official standard and includes details that are specific to drone operations. The logbook has 120 pages and measures 8 inches by 10 inches for convenient carry and adequate size. Each page has space for 3 logged flights. You have space for 360 drone flights and dedicated spots for each flight date location drone number (registration number) drone type aircraft performance characteristics aircraft's lost link procedures ...and more! Why do you need a drone log book? Marketing. Showing a completed logbook to a potential customer is a great marketing point. Like the old adage, A picture is worth a thousand words, a good logbook is worth a thousand flights. You can quickly demonstrate your flight experience by flipping through the pages. Furthermore, a well-kept and orderly logbook gives the impression that you are a professional. The FAA or Law Enforcement Can Request Your Logbook. If you are a commercial operator flying under Part 91 & Part 61 (like with a Section 333 exemption), 14 C.F.R. § 61.51(i) says, Persons must present their pilot certificate, medical certificate, logbook, or any other record required by this part for inspection upon a reasonable request by the FAA, an authorized representative from the National Transportation Safety Board, or any Federal, State, or local law enforcement officer. If your electronic logbook is on your device, do you really want to give law enforcement or the FAA your device? Furthermore, how are you to get the data off that device? Insurance. When you apply for insurance, they will ask you to fill out a form that is going to ask for all sorts of information. A logbook will assist you in filling out the form so you can receive the most accurate quote. Required in Other Countries. Other countries such as South Africa require the drone logbook to be in paper. Paper is the current industry standard. Less Cumbersome. If you are marketing to a potential client, you can scan pages of your logbook and send it to them. It is more cumbersome to get the data off a phone or website. Very Little Problems. What happens if your phone is stolen, water damaged, battery dies, or there is poor cell phone signal? Paper does not need a cell signal or batteries. No Data Theft. You don't have to worry about data theft like you would with a website or an app. Fidelity. Electronic logbooks can be changed while pen and paper are permanent. Buy now for yourself or a friend and be confident in your drone's flight log.

Determining In-Flight Tracker Accuracy ,2006 Evaluating a system in flight poses challenges that are not found in a laboratory environment. This paper

discusses some of the issues involved in conducting an in-flight test to evaluate tracker accuracy, such as head movement, synchronization of time, changing coordinate systems, and interpolating data. The paper describes six types of accuracy: laboratory static, laboratory dynamic, installed static, installed dynamic, operational static, and operational dynamic. In general, as the realism of the accuracy increases, the difficulty in setting up a test to find the accuracy also increases. The authors present one possible method of finding installed static (ground testing) and operational static (flight testing) accuracies in a helmet-mounted tracker used in jet fighter aircraft. The calculations are straight forward, but data issues that cause measurement error, such as vibration and synchronization of time, must be dealt with. The paper's technical approach outlines one possible solution for dealing with in-flight challenges.
