**The bh TCSPC Handbook** Dr. Wolfgang Becker,2021-09-01 Time-Correlated Single Photon Counting Modules SPC-130EMN, SPC-130EMNX, SPC-130IN, SPC-130INX, SPC-150N, SPC-150NX, SPC-150NXX, SPC-160, SPC-160PCIE, SPC-180N, SPC-180NX, SPC-180NXX Detectors, Lasers and Peripheral Devices Simple-Tau Systems Technical Principles TCSPC Applications FLIM Systems Applications in Life Sciences Clinical FLIM Applications SPCM Software SPCImage NG Data Analysis Software Time-correlated single photon counting (TCSPC) is an amazingly sensitive technique for recording low-level light signals with picosecond resolution and extremely high precision.TCSPC originates from the measurement of excited nuclear states and has been used since the late 60s [775, 1250]. For many years TCSPC was used primarily to record fluorescence decay curves of organic dyes in solution. Due to the low intensity and low repetition rate of the light sources and the limited speed of the electronics of the 70s and 80s the acquisition times were extremely long. More important, classic TCSPC was intrinsically one-dimensional, i.e. limited to the recording of the waveform of a periodic light signal. Light sources ceased to be a limitation when the first mode-locked Argon lasers and synchronously pumped dye lasers were introduced. For the recording electronics, the situation changed with the introduction of the SPC-300 modules of Becker & Hickl in 1993. Due to a new analog-to-digital conversion principle these modules could be used at photon count rates almost 100 times higher than the classic TCSPC devices. Moreover, the modules were able to record the photons of a large number of detectors simultaneously. They were thus able to record a photon distribution not only versus the time in a fluorescence decay but also versus aspatial coordinate or the wavelength of the photons. Multi-dimensional TCSPC was born. Within a few years, more dimensions were added to multidimensional TCSPC. Fast sequential recording was introduced with the SPC-430 in 1995, fast scanning with the SPC-535 in 1997. Time-tag recording was introduced with the SPC-431 in 1996; multi-module TCSPC systems followed in 1999. Since then, the Becker & Hickl TCSPC systems became bigger, faster and more flexible. Recent TCSPC modules, like the SPC-150NX or the SPC-180, can be configured for sequential recording, imaging, or time-tag recording by a simple software command. Multi-module systems, like the SPC-134EM and SPC-154, can be used for scanning at unprecedented count rates and acquisition speeds. Nevertheless, TCSPC still has the reputation to be an extremely sluggish technique unable to record any fast changes in the fluorescence or scattering behaviour of a sample. The multidimensional features of modern TCSPC are not commonly understood. Thus, many users do not make efficient use of their SPC modules. However, if appropriately used, multidimensional TCSPC techniques not only deliver superior results but also solve highly sophisticated measurement problems. This handbook is an attempt to help existing and potential users understand and make use of the advanced features of modern TCSPC. After an introduction into the bh TCSPC devices and associated detector, laser, and experiment control modules the principles of advanced TCSPC techniques are described. These include multidetector TCSPC, multiplexed TCSPC, sequential recording techniques, scanning techniques, parameter-tag recording, and multi-module TCSPC techniques. The next chapter describes the architecture of the bh SPC modules. A chapter about detectors gives a review of detector principles and of the parameters used to characterise detectors. It describes a number of detectors commonly used for TCSPC and gives advice about obtaining best performance from them. The implementation of bh SPC devices is described in the next part of the handbook. It includes principles and wiring diagrams for typical experiments, guidelines for first system setup, and advice for system optimisation. It describes dead-time, counting loss, and pile-up effects, detector effects, and effects related to the optical system. The next chapter of the handbook is dedicated to TCSPC applications. The first part of this chapter describes the measurement of fluorescence and anisotropy decay curves, multispectral lifetime experiments, recording of transient fluorescence lifetime phenomena, and measurements of phosphorescence decay curves. The second part of the chapter is dedicated to time-resolved laser scanning microscopy. It contains sections on a wide variety of fluorescence-lifetime imaging (FLIM) experiments and procedures, such as FLIM with various excitation principles, excitation sources, and detection principles, high-speed and time-series FLIM, Z-stack FLIM, simultaneous fluorescence and phosphorescence lifetime imaging (FLIM/PLIM), fluorescence lifetime-transient scanning (FLITS), and FLIM with special microscope configurations. A third part contains FLIM background knowledge: Signal-to-noise ratio, acquisition time, the effect of counting loss and pile-up, photobleaching, and fluorescence depolarisation on the recorded data. The book contains a large chapter on TCSPC applications, most of them in Biology. It contains sections on FLIM of molecular environment parameters in tissue, FLIM-based FRET measurements in cells, autofluorescence FLIM of biological tissue, plant physiology, and clinical FLIM applications. A section about diffuse optical tomography (DOT) by NIRS techniques includes breast imaging, static and functional brain imaging, perfusion measurement in the human brain, diffuse tissue spectroscopy, and small-animal imaging. Picosecond photon correlation, fluorescence correlation spectroscopy, burst-integrated fluorescence lifetime techniques, and photon counting histogram techniques are reviewed in the next sections. The last part of the application chapter gives an review of non-biological TCSPC applications like positron lifetime measurement, measurement of barrier discharges, remote sensing, metrological applications, and characterisation of detectors. The application chapter also includes practical hints about optical systems, detectors, and other technical aspects of the applications described. Another large chapter describes the SPCM operating software of the bh SPC modules. It describes the various user interface configurations, operation modes, the system and control parameters, the handling and display of the multidimensional data recorded by the modules, and the associated data file structure. The TCSPC Handbook also contains a chapter on the SPCImage NG fluorescence decay and FLIM data analysis software. It describes the general principles of fluorescence decay analysis, the calculation of fluorescence decay parameters and lifetime images by various decay models, pseudo-global analysis, multi-wavelength FLIM analysis, batch-processing of FLIM series, and analysis of PLIM data. The handbook ends with a list of more than 1200 references related to TCSPC, most of them being applications of the bh SPC devices.

**Parallel Computer Routing and Communication** Sudhakar Yalamanchili,Jose Duato,2003-06-26 This workshop was a continuation of the PCRCW '94 workshop that focused on issues in parallel communication and routing in support of parallel processing. The workshop series provides a forum for researchers and designers to exchange ideas with respect to challenges and issues in supporting communication for high-performance parallel computing. Within the last few years we have seen the scope of interconnection network technology expand beyond traditional multiprocessor systems to include high-availability clusters and the emerging class of system area networks. New application domains are creating new requirements for interconnection network services, e.g., real-time video, on-line data mining, etc. The emergence of quality-of-service guarantees within these domains challenges existing approaches to interconnection network design. In the recent past we have seen the emphasis on low-latency software layers, the application of multicomputer interconnection technology to distributed shared-memory multiprocessors and LAN interconnects, and the shift toward the use of commodity clusters and standard components. There is a continuing evolution toward powerful and inexpensive network interfaces, and low-cost,

high-speed routers and switches from commercial vendors. The goal is to address the above issues in the context of networks of workstations, multicomputers, distributed shared-memory multiprocessors, and traditional tightly-coupled multiprocessor interconnects. The PCRCW '97 workshop presented 20 regular papers and two short papers covering a range of topics dealing with modern interconnection networks. It was hosted by the Georgia Institute of Technology and sponsored by the Atlanta Chapter of the IEEE Computer Society.

The Long Distance Playlist Tara Eglington, 2020-01-01 Told primarily in instant messenger conversations, Skype, emails and texts, this is Jaclyn Moriarty's Feeling Sorry for Celia for the modern teen. Longlisted in the 2021 Australian Book Design Awards. Taylor and Isolde used to be best friends – before THAT FIGHT, 18 months ago. It's been radio silence ever since – until Taylor contacts Isolde to sympathise with her breakup: the breakup that she never saw coming; the breakup that destroyed her confidence and ended her dreams of joining the National Ballet School. Taylor's had his own share of challenges, including a life-altering accident that has brought his hopes of competing at the Winter Olympics to a halt. Isolde responds to Taylor, to be polite. But what starts out as heartbreak-themed Spotify playlists and shared stories of exes quickly becomes something more. And as Taylor and Isolde start to lean on each other, the distance between them begins to feel not so distant after all ... A boy. A girl. A one-of-a-kind friendship. Cross-country convos and middle-of-the-night playlists. With big dreams come even bigger challenges. **Advanced Optical Methods for Brain Imaging** Fu-Jen Kao, Gerd Keiser, Ankur Gogoi, 2018-05-14 This book highlights the rapidly developing field of advanced optical methods for structural and functional brain imaging. As is known, the brain is the most poorly understood organ of a living body. It is indeed the most complex structure in the known universe and, thus, mapping of the brain has become one of the most exciting frontlines of contemporary research. Starting from the fundamentals of the brain, neurons and synapses, this book presents a streamlined and focused coverage of the core principles, theoretical and experimental approaches, and state-of-the-art applications of most of the currently used imaging methods in brain research. It presents contributions from international leaders on different photonics-based brain imaging modalities and techniques. Included are comprehensive descriptions of many of the technology driven spectacular advances made over the past few years that have allowed novel insights of the structural and functional details of neurons. The book is targeted at researchers, engineers and scientists who are working in the field of brain imaging, neuroscience and connectomics. Although this book is not intended to serve as a textbook, it will appeal to undergraduate students engaged in the specialization of brain imaging.

**The Telling Distance** Bruce Berger, 1997-01-01 Winner of the 1990 Western States Book Award for Creative Nonfiction, The Telling Distance evokes the yearning expanses of our southwestern deserts and finds them full of sensuous marvels, erratic life forms, eccentric fellow travelers, dry humor, and surprise. In prose that revels in paradox, it reveals desert distances to be doubly telling: they both magnify our spirit and have incomparable tales to tell.

*Lights in the Distance* Daniel Trilling, 2018-09-18 Immersive, engrossing report on the European refugee crisis A mother puts her children into a refrigerator truck and asks, “What else could I do?” A runaway teenager comes of age on the streets, sleeping in abandoned buildings. A student leaves his war-ravaged country behind because he doesn’t want to kill. Everyone among the thousands of people who come to Europe in search of asylum each year possesses a unique story. But those stories don’t end as they cross into the West. In *Lights in the Distance*, acclaimed journalist Daniel Trilling draws on years of reporting to build a portrait of the refugee crisis as seen through the eyes of the people who experienced it firsthand. As the European Union has grown, so has a tangled and often violent system designed to filter out unwanted migrants. Visiting camps and hostels, sneaking into detention centers, and delving into his own family’s history of displacement, Trilling weaves together the stories of people he met and followed from country to country. In doing so, he shows that the terms commonly used to define them—“refugee” or “economic migrant,” “legal” or “illegal,” “deserving” or “undeserving”—fall woefully short of capturing the complex realities. The founding story of the EU is that it exists to ensure the horrors of the twentieth century are never repeated. Now, as it comes to terms with the worst refugee crisis since the Second World War, its declared values of freedom, tolerance and respect for human rights are being put to the test. *Lights in the Distance* is a uniquely powerful and illuminating exploration of the nature and human dimensions of the crisis.

Instantaneous Action at a Distance in Modern Physics Andrew E. Chubykalo, Pope, Viv, Roman Smirnov-Rueda, 1999 The so-far unanswered question of whether the movements of distance-separated objects are correlated in the way quantum physics requires or whether, according to Einstein, they can influence one another only by mechanical agencies travelling between them at speeds limited to that of light. It is to that still unanswered question that this present compilation of papers is addressed. The editorial approach is unusual in that in order to break the current conceptual deadlock and to encourage true innovation they have solicited inputs which are multidisciplinary. This open-ended venture is therefore perhaps more in line with what was once called Natural Philosophy than with what is currently known as 'Physics'. This is something of a departure for those who say that Physics no longer has anything to do with Philosophy. For there are physicists who believe that their predecessors have accomplished all the really important conceptual work on interpreting natural phenomena, so that there is no longer any call for radical revision in that direction. This leads to a constricted form of the discipline in which the purpose of all observation and experimentation is seen as simply to collect more and more information and fit it to conceptions which are traditionally 'cut and dried'. The emphasis is thus on presenting informed and carefully considered descriptions of natural phenomena, economizing as far as possible on interpretations in terms of entities which turn out to be no more than speculative.

The Distance Between Us Maggie O'Farrell, 2024-02-20 Winner of the 2004 Somerset Maugham Award: Gripping, insightful, and deft—a haunting story about the ways our families shape our lives, from the award-winning author of *Hamnet* and *The Marriage Portrait*. On a cold February afternoon, Stella catches sight of a man she hasn't seen for many years, but instantly recognises. Or thinks she does. At the same moment on the other side of the globe, in the middle of a crowd of Chinese New Year revellers, Jake realises that things are becoming dangerous. They know nothing of one another's existence, but both Stella and Jake flee their lives: Jake in search of a place so remote it doesn't appear on any map, and Stella for a destination in Scotland, the significance of which only her sister, Nina, will understand.

**A Concordance to the Poems of Emily Dickinson** S. P. Rosenbaum,2019-06-30 A Concordance to the Poems of Emily Dickinson is the third volume in the distinguished series Cornell Concordances. Like the others, it was programmed on an IBM 704 electronic computer and provides an alphabetical list of all significant words—each word given in context. In order to provide variants, it was based on Thomas H. Johnson's three-volume edition of all the known texts of Emily Dickinson's poems. Included are an analytical preface by the editor and an index of words in the order of frequency.

**Going the Distance** Alexandra Alan,2021-03-02 FROM EXCITING ROMANCE AUTHOR ALEXANDRA ALAN Will one ride convince her to go the distance? Hitchhiking is easy, right? Stick out a thumb, hop in an old jalopy and see the country from behind someone else's bug-splattered window. But even hitching from Boston to Los Angeles was a lot trickier than Cara had imagined. Enter the semi-truck. Cara never expected to hitch a ride in a vehicle larger than a minivan, yet when Nate Hayes offers her a lift, something urges her to leap into the passenger seat. He's handsome and taciturn, and she's sure there's more depth to this man than he initially reveals. On the road from one side of the country to the other, her intrigue quickly turns into attraction, then into something she really doesn't want to feel for a man who's going to disappear in less than a week. As Cara's destination looms, she realizes that she wants to go the distance with Nate...but will it be possible?
