The World Bank Devesh Kapur, John P. Lewis, Richard C. Webb, 2010-12-01 This effort constitutes the most comprehensive and authoritative work to date on the history of the International Bank for Reconstruction and Development, or the World Bank. Author-editors John Lewis, Richard Webb, and Devesh Kapur chronicle the evolution of this institution and offer insights into its successes, failures, and prospects for the future. The result of their intense labors is an invaluable resource for other researchers and a fascinating study in its own right. The work is divided into two volumes. The first is organized thematically and examines the critical events and policy issues in the World Bank's development over the last fifty years. Chapter topics include poverty alleviation, structural adjustment lending, environmental programs, the International Finance Corporation (IFC), the International Development Association (IDA), and the evolution of the Bank as an institution. The second volume contains case studies written by experts with experience in the various regions in which the Bank operates. There are chapters on the Bank's activities in Korea, Mexico, Africa, South Asia, and Eastern Europe. Volume 2 also contains essays on the World Bank's relationship with the United States, Japan, and Western Europe, and its partnership with the International Monetary Fund (IMF). By special arrangement, the authors have had wide-ranging access to confidential documents at the World Bank, making this work a unique source of information

on the internal workings of this critical institution. They have also drawn on extensive interviews with current and past Bank officials. Moreover, publication could not be more timely, coming as it does when many in the development community and in the U.S. Congress are questioning the Bank's track record and even its reason for existence. The World Bank: Its First Half Century will be of great interest not only to development practitioners but also to students of international relations, development economics, and global finance. During the course of the project, John P. Lewis and Richard Webb were nonresident senior fellows, and Devesh Kapur was a program associate, in the Foreign Policy Studies program at the Brookings Institution.

Banks, Finance and Investment in Germany Jeremy Edwards, Klaus

Fischer, 1996-01-26 This book analyses the widely-held view of the merits of the 'bank-based' German system of finance for investment, and shows that this

view is not supported by evidence from the post-war period. The institutional features of the German system are such that universal banks have control of voting rights at shareholders' meetings due to proxy votes, and they also have representation on companies' supervisory boards. These features are claimed to have two main benefits. One is that the German system reduces asymmetric information problems, enabling banks to supply more external finance to firms at a lower cost, and thus increasing investment. The other is that German banks are able to mould and control managements of firms on behalf of shareholders, and thus ensure that firms are run efficiently. This book assesses whether empirical evidence backs up these claims, and shows that the merits of the German system are largely myths.

Banks as Multinationals (RLE Banking & Finance) Geoffrey Jones, 2012-12-07
This comparative, international study looks at origins and business strategies of multinational banks. A distinguished team of bankers and academics from the United States, Japan, Europe and Australia survey the evolution of multinational banks over time and suggest a conceptual framework in which this development can be understood. In-depth analyses of the multinational banking strategies of selected countries and institutions lead from early nineteenth century on to late twentieth century developments and future trends in investment banking. The approach is interdisciplinary, with economists and business historians joining together to confront theory with facts. The findings presented in this major study will be of interest to

scholars and professionals in international business, banking and finance, economists and business and economic historians.

Banks on the Brink Mark Copelovitch, David A. Singer, 2020-02-20 This innovative analysis investigates a complex issue of tremendous economic and political importance: what makes some countries vulnerable to banking crises, while others emerge unscathed? *Banks on the Brink* explains why some countries are more vulnerable to banking crises than others. Copelovitch and Singer highlight the effects of two variables in combination: foreign capital inflows and the relative prominence of securities markets in the domestic financial system. Foreign capital is the fuel for banks' potentially dangerous behavior, and banks are more likely to take on excessive risks when operating in a financial system with large securities markets. The book analyzes over thirty years of data and provides historical case studies of two key countries, Canada and Germany, each of which explores how political decisions in the 19th and early-20th centuries continue to affect financial stability today. The analyses in this book have crucial policy implications, identifying potential regulations and policies that can work to protect banking systems against future crises.

The Rise of FinTech. Threats and Opportunities for the German Retail Banking Market Stephan Hoppe, 2018-03-14 Banking is necessary, banks are not – Bill Gates' famous statement from 1994 was not just provocative but also

foresighted. With new technology-based providers, also known as FinTech businesses, a new player has entered the banking market and it contests the predominant role of traditional methods in financial services. Banks are now forced to ask themselves whether they can provide some additional value in comparison to digitalized FinTech companies. This applies especially to the field of retail banking. Stephan Hoppe describes the rise of the FinTech industry and outlines its impact on selected business segments of the German retail banking market. In this way his publication elaborates the threats but also the opportunities for the retail banking industry. Content: - FinTech; - retail banking; - financial services; - digitalisation; - financial technology

Financial Crises and the Limits of Bank Reform Eileen Keller, 2021 Financial Crises and the Limits of Bank Reform examines the responses that were implemented in France and Germany, two comparable European economies, in the aftermath of the global financial crisis from 2007/2008 with respect to the future economic role of the banks. While France pushed for greater independence from the banks by strengthening financial disintermediation and

non-bank intermediation, Germany supported classic bank intermediation. Analysing the reasons for this puzzling difference, this book shows that the main lessons drawn from the crisis were the consequence of differing patterns of social learning, leading to changes in widely shared beliefs of specific aspects of banking. While these were related to the conditions of bank lending and the limits of bank intermediation in France, in Germany they were linked to the risks of financial innovation and financial sector concentration. The book draws on an in-depth analysis of French and German banking and financial sector reforms in the decades prior to the crisis, crisis management, and the responses implemented in the aftermath, featuring extensive interview data with over 70 professionals in addition to profound document and data analysis. It discusses alternative theoretical approaches and spells out the ontological foundations and behavioural implications of the social learning approach to policy change. Contrary to other accounts of the post-crisis reforms concentrating on regulatory change, the author focuses on how evolving financial practices and reform priorities mutually condition each other over time, forming distinctive developmental paths. As this book shows, it is only once we embed the reform options chosen in their specific institutional and socio-economic context that we fully understand the driving forces behind the post-crisis reforms.

Joint Stock Banking in Germany P Barrett Whale, 2017-07-14 This classic study of German creditbanks was first published in 1930 and even now deserves

its place as a fundamental text on banking in Germany. It is a valuable comparative study of one important type of financial institution and represents a detailed survey of Joint Stock Banking in Germany in the pre-war, war and post-war periods up to 1928.

The sale of non-performing loans - beneficial for a bank? Dirk Grötzinger, 2006-01-25 Inhaltsangabe: Abstract: Recently business magazines and newspapers have reported regularly about settled NPL deals. NPL is the abbreviation for a non-performing loan and simply describes a situation in which the debtor stopped complying to the terms agreed upon with the lender. Depending on the specific credit terms, the borrower has to pay interest and to repay the principle at a certain time. If this does not happen at a specific time the lender will demand the debtor to stick to the agreed terms and finally, in the event that the debtor does not change his or her behaviour, terminate the underlying contract. At what specific point in this process the loan should be qualified as a non-performing loan is not standardized. The range of past due periods varies from 30 days, over 90 days, to even 180 days. Neither accounting rules nor supervisory law specify yet under which conditions a financial institution has to classify certain loans as non-performing loans. However, this will change with the enforcement of Basel II, and also thanks to international distressed debt investors which demand for global standards. From time to time financial institutions amass huge stocks of these loans which finally leads to a wave of NPL sales. The

market for NPL s evolves and is active for three to five years. After resolving the stock of NPL s it breaks down and stays relatively inactive for a longer time before it might develop again. Beside this time-related feature, a geographic pattern can be detected. The market does not evolve at the same time all around the world, but moves from one country or economic zone to the other. Right now, Germany is the most active market in Europe. The question is why. The sale of NPL s belongs neither for mortgage banks nor for commercial banks to their ordinary business. On the contrary, these banks are selling part of their core business the credit business. Of course defaulting debtors are not the most attractive ones for banks, and therefore who would to question the bank that wants to get rid of them. On the other hand banks dispose of traditional instruments to deal with these customers. The work-out department is usually in charge of collecting receivables and also the transfer of the respective receivables to debt-collecting agencies is a long exercised practice among banks. Are these traditional means no longer able to deal with the indubitable tremendous stock on NPL s in German banks and will the outsourcing [...]
