Angry Pigs Organized Against Gerbils Farrel D. Hobbs, Andrew S. Brown, Campbell E. Brown, Clayain M. Hobbs, Davis K. Hobbs, 2012-08-13 Why did pigs organize against gerbils? The old farmer passed away and the animals were left alone on the isolated farm. The pigs understood they had to grow food to survive, but the gerbils did not. Hard times came and the gerbils threatened war if the pigs did not give them food. The pigs organized to protect their families, the barn, and the food, and grew angry over the weapons and tactics used by the gerbils as the conflict escalated. Rats and pigeons became secret spies for the pigs and the cats bolstered the last line of defense in what became the Farmer Island War. In a story reminiscent of George Orwell's Animal Farm, where animals battle for political supremacy, this book tells the story of the great Farmer Island War where pigs fight to control food supplies and the onslaught of a gerbil invasion.

Toxocara Celia Holland, Huw V. Smith, 2006 This book contains 19 chapters focusing on Toxocara and the disease it causes known as toxocariasis. The chapters are divided into the following parts: molecular biology (3 chapters); Toxocara as a model system (2); animal models for toxocariasis (1); human disease (4); immunology of toxocariasis (2); epidemiology of toxocariasis (3); Toxocara in the veterinary context (3); economic impact of the disease (1). It will interest a wide range of general, veterinary and medical parasitologists as well as clinicians and those concerned with public health.

Rapid Review of Exotic Animal Medicine and Husbandry Karen L. Rosenthal, Neil Forbes, Fredric L. Frye, Gregory A. Lewbart, 2008-03-28 Four authors of international renown have combined their practical and instructional skills to provide this focused yet wide-ranging review. The book is divided into four sections—small mammals, birds, reptiles/amphibians, ornamental fish—and consists of an introduction to the essential aspects of medicine and husbandry of each group of animals, 400 color-illustrated clinical cases, plus summary questions to highlight key points. The cases are a blend of the more common and especially interesting conditions, and cover clinical presentation, etiology/pathogenesis, investigation, diagnosis and differential diagnosis, management options, prognosis and husbandry advice to the client. The case-based approach offers the freedom to deal succinctly with multifactorial and multisystemic conditions. Cases are cross-referenced, cite key references and there is a detailed index. The Rapid Review is designed to appeal to veterinary practitioners dealing with an ever-wider variety of animals, to veterinary instructors and students, technicians, nurses and assistants, and to other animal health professionals in practice and training.

Journal of the National Cancer Institute, 1979

The Biology of Gastric Cancers Timothy Wang, James Fox, Andy Giraud, 2009-02-25 As someone who has spent nearly half his life wondering about the relationship between Helicobacter and gastric cancer, I find this textbook on the subject exciting and timely. In fact, I am not aware of any other volume that has been able to distil so much new knowledge into such a comprehensive account of a poorly understood field. Taking my own view, as a scientist placed in the middle of the spectrum between basic science and clinical medicine, I can see that the editors, Jim Fox, Andy Giraud, and Timothy Wang, provide a broad mix of expertise, which ensures that the subject is treated with the right balance. From clinicopathologic observations in humans, to epidemiology, through animal models, to molecular and cell biology, this team has hit the mark for most readers. Fox is a well-known leader in animal models with broad expertise. He pioneered the field with observations on Helicobacter species in animals, from the time when only one spiral gastric bacterium was known, "Campylobacter pyloridis." Fox partners with Wang, whose team recently announced a dramatic advance in the field of carcinogenesis—the observation that bone marrow-derived stem cells participate in the changes that become cancer. To this nice mix has been added Andy Giraud from my own country, who brings to the table some remarkable genetic models of gastric cancer based on alterations in the gp130/stat3-signaling pathway.

Protozoa Emilio Jirillo, Olga Brandonisio, 2010-08-08 This Ebook provides an interesting and up-to-date overview of Parasite Immunology in terms of a survival battle between hosts and parasites, describing firstly how parasites interact with different B cell compartments and trigger a vigorous antibody response. An Interesting chapter deals with new insights into immune diagnosis in Trypanosoma cruzi infection, while another chapter on malaria vaccines critically reviews their development since the beginning, examining the basis for failures or successes encountered in clinical trials. Chapters on immunological aspects of amoebiasis, giardiasis.

Advances in Yersinia Research Alzira Maria Paiva de Almeida, Nilma Cintra Leal, 2012-07-11 This book is a collection of articles written by prominent scientists who gathered in the city of Recife, Brazil, 23-27 October 2010, celebrating the 10th International Symposium on Yersinia. The event is held every four years in a different country and for the Yersinia 2010, an interesting and updated program covering advances in research in Yersinia was organized. The major advances achieved over the past four years since the last symposium held in Lexington, USA in 2006 were divided into eight chapters: Epidemiology, Clinical, Diagnostic and Therapeutic aspects; Ecology and Modeling; Genomic/Transcriptomics and Large Scale Population; Immune Response and Vaccine; Pathogenesis and Pathogenicity Factors; Cellular Yersiniology; Bacterial Structure and Metabolism: Roles in Pathogenesis and Bacterial Life Style. The purpose of the book is to extend cutting edge knowledge on Yersinia discussed during the 10th International Symposium.

The Legend of Jet the Gerbil Michael Keller, 2021-05-03 The Legend of Jet the Gerbil is the true story of an amazing pet gerbil and his human, a young boy named Michael. Michael and Jet are best friends and find lots of fun ways to play together. Jet is big, strong, fast, and brave. He can do remarkable things like run mazes, spin around in his wheel upside down, and chew through giant cardboard tubes in minutes. Jet even teaches Michael's cat a lesson or two. One day, when Michael and his dad are cleaning Jet's tank, something goes terribly wrong, setting Michael and his dad on a fast-paced adventure to find and rescue Jet. Michael knows Jet is strong and brave, but can he survive until rescued? The Legend of Jet the Gerbil showcases love, friendship, hope, resilience, and perseverance through beautiful watercolor illustrations and an engaging story. Jet's incredible survival could make this the greatest gerbil story ever told!

Caring for My New Gerbil John Bankston,2019-07-04 What age is the right age to have your first pet? Everything a youngster needs to know about owning and caring for a new gerbil is explained in this book including easy-to-understand instructions about daily care, cleaning, feeding and maintaining for one of most popular pets in North America.

Infections Causing Human Cancer Harald zur Hausen,2007-09-24 Infections must be thought as one of the most important, if not the most important, risk factors for cancer development in humans. Approximately 15-20% of all cases of cancer around the world are caused by viruses. The establishment of a causal relationship between the presence of specific infective agents and certain types of human cancer represents a key step in the development of novel therapeutic and preventive strategies. In this book, Professor zur Hausen (Nobel Prize in Physiology/Medicine 2008) provides a thorough and comprehensive overview on carcinogenic infective agents -- viruses, bacteria, parasites and protozoons -- as well as their corresponding transforming capacities and mechanisms. The result is an invaluable and instructive reference for all oncologists, microbiologists and molecular biologists working in the area of infections and cancer. The author was among the first scientists to reveal the cervical cancer-inducing mechanisms of human papilloma viruses and isolated HPV16 and HPV18, and, as early as 1976, published the hypothesis that wart viruses play a role in the development of this type of cancer.

Small Mammals Susan A. Brown,Karen L. Rosenthal,1997-04-01 Veterinary practitioners are faced regularly by diseases and disorders in a large and ever increasing range of small mammalian patients. The Editors have gathered together contributions from 29 experts, who cover all aspects of medicine and surgery in small mammals including rabbits, guinea pigs, rodents, hedgehogs, ferrets, primates, squirrels, foxes, potbellied pigs, raccoons and many more. The randomised self-assessment format is used to enable the reader to think through each case step by step. Each of the 225 questions and illustrations - colour photos, imaging, charts and tables is followed by a thorough explanation to provide diagnosis and a suggested treatment plan.

Between Ruin and Restoration Daniel E. Orenstein,Char Miller,Alon Tal,2013 The environmental history of Israel is as intriguing and complex as the nation itself. Situated on a mere 8,630 square miles, bordered by the Mediterranean Sea and Persian Gulf, varying from desert to forest, Israel's natural environment presents innumerable challenges to its growing population. The country's conflicted past and present, diverse religions, and multitude of cultural influences powerfully affect the way Israelis imagine, question, and shape their environment. Zionism, from the late nineteenth onward, has tempered nearly every aspect of human existence. Scarcities of usable land and water coupled with border conflicts and regional hostilities have steeled Israeli's survival instincts. As this volume demonstrates, these powerful dialectics continue to undergird environmental policy and practice in Israel today. Between Ruin and Restoration assembles leading experts in policy, history, and activism to address Israel's continuing environmental transformation from the biblical era to the present and beyond, with a particular focus on the past one hundred and fifty years. The chapters also reflect passionate public debates over meeting the needs of Israel's population and preserving its natural resources. The chapters detail the occupations of the Ottoman Empire and British colonialists in eighteenth and nineteenth century Palestine, as well as Fellaheen and pastoralist Bedouin tribes, and how they shaped much of the terrain that greeted early Zionist settlers. Following the rise of the Zionist movement, the rapid influx of immigrants and ensuing population growth put new demands on water supplies, pollution controls, sanitation, animal populations, rangelands and biodiversity, forestry, marine policy, and desertification. Additional chapters view environmental politics nationally and internationally, the environmental impact of Israel's military, and considerations for present and future sustainability.

Ferrets, Rabbits and Rodents - E-Book Katherine Quesenberry,James W. Carpenter,2011-05-12 A concise guide to the care of small mammals, Ferrets, Rabbits, and Rodents: Clinical Medicine and Surgery covers the conditions seen most often in veterinary practice. The book emphasizes preventive medicine along with topics including disease management, ophthalmology, dentistry, and zoonosis. More than 400 illustrations demonstrate key concepts related to radiographic interpretation, relevant anatomy, and diagnostic, surgical, and therapeutic techniques. Now in full color, this edition adds coverage of more surgical procedures and expands coverage of zoonotic disease. From editors Katherine Quesenberry and James W. Carpenter, along with a team of expert contributors, the Pink Book provides an authoritative, single source of information that is hard to find elsewhere. A logical organization makes it quick and easy to find important information, with each section devoted to a single animal and chapters within each section organized by body system. Over 400 photographs and illustrations highlight key concepts such as radiographic interpretation and the main points of diagnostic, surgical, and therapeutic techniques. A chapter on ophthalmology provides hard-to-find information on eye care for ferrets, rabbits, rodents, and other small mammals. Coverage of preventive medicine includes basic biology, husbandry, and routine care of the healthy animal. The drug formulary supplies dosage instructions for ferrets, rabbits, guinea pigs, chinchillas, hamsters, rats/mice, prairie dogs, hedgehogs, and sugar gliders. Chapter outlines offer at-a-glance overviews of the contents of each chapter. Handy tables and charts make it easy to find key information. Expanded Zoonotic Diseases chapter adds more depth along with the latest information on the rising potential for disease transmission to humans as exotic pets become more popular. Additional surgical procedures for each species are included, some with step-by-step instructions accompanied by color photographs and line drawings. Full-color images show the sometimes minute structures of these small animals and make accurate diagnoses easier, especially for lymphoproliferative diseases of rabbits, endoscopy, cytology, and hematology.
