The Green Agenda in American Politics Robert J. Duffy,2003 Organizations such as the Sierra Club and Friends of the Earth are familiar to anyone with an interest in environmental protection. As activist groups, they played by the same rules for years. But in 1994, the rules changed. With the Republican takeover of Congress, environmental groups faced sweeping changes in federal policies that threatened the enforcement of environmental laws. As these organizations intensified their efforts to meet these challenges, they also altered their electoral strategies and political spending patterns. This book traces those actions and shows what they mean for the future of environmentalism in the political arena. While environmental advocacy groups have become bigger and better funded in recent years, so have the corporate interests that compete with them for the attention of public and politicians. The Green Agenda in American Politics offers a new look at environmental advocacy that focuses on contemporary lobbying, electioneering, and agenda setting in this new context. Drawing on interviews with activists from a wide range of organizations, Robert Duffy describes what environmental groups actually do when lobbying officials or the public. He examines activity at both national and state levels to emphasize their growing use of websites, email, and action alert networks to conduct more sophisticated grassroots campaigns, and he shows how they are devoting more funds to unregulated forms of spending such as independent expenditure, issue advocacy advertising, and public education campaigns. Duffy also tracks emerging trends in interest group politics and provides an overview of activism through the early 1990s. He then documents the emergence of more aggressive action after 1994, such as providing campaign services to candidates and mounting voter registration drives. He also shows how state and local groups have begun to play more important roles in the wake of the rollback of federal environmental regulations. Brimming with new insights into interest group lobbies in general and contemporary environmental groups in particular, Duffy's book opens a new window on the influence of Big Money in the supposedly democratic electoral process.

Oxford Handbook of Internet Psychology Adam Joinson, Katelyn McKenna, Tom Postmes, Ulf-Dietrich Reips, 2009-02-12 Over one billion people use the Internet globally. Psychologists are beginning to understand what people do online, and the impact being online has on behaviour. It's making us re-think many of our existing assumptions about what it means to be a social being. For instance, if we can talk, flirt, meet people and fall in love online, this challenges many of psychology's theories that intimacy or understanding requires physical co-presence. The Oxford Handbook of Internet Psychology brings together many of the leading researchers in what can be termed 'Internet Psychology'. Though a very new area of research, it is growing at a phenomenal pace. In addition to well-studied areas of investigation, such as social identity theory, computer-mediated communication and virtual communities, the volume also includes chapters on topics as diverse as deception and misrepresentation, attitude change and persuasion online, Internet addiction, online relationships, privacy and trust, health and leisure use of the Internet, and the nature of interactivity. With over 30 chapters written by experts in the field, the range and depth of coverage is unequalled, and serves to define this emerging area of research. Uniquely, this content is supported by an entire section covering the use of the Internet as a research tool, including qualitative and quantitative methods, online survey design, personality testing, ethics, and technological and design issues. While it is likely to be a popular research resource to be 'dipped into', as a whole volume it is coherent and compelling enough to act as a single text book. The Oxford Handbook of Internet Psychology is the definitive text on this burgeoning field. It will be an essential resource for anyone interested in the psychological aspects of Internet use, or planning to conduct research using the 'net'.

Times of Convergence. Technologies Across Learning Contexts Pierre Dillenbourg, Marcus Specht, 2008-09-08 The European Conference on Technology-Enhanced Learning (EC-TEL 2008) was the third event of a series that started in 2006. The two first editions were organized by Pro-Learn (<http://www.prolearn-project.org/>), a European Network of Excellence. In 2008, several members of Kaleidoscope, the other European Network of Excellence (<http://www.noe-kaleidoscope.org/pub/>), joined as co-chair, committee members, reviewers and authors. These two networks are no longer funded, but our aim was to turn EC-TEL into a sustainable series of high-quality events and thereby to contribute to the scientific landscape of technology-enhanced learning. A new network, named STELLAR, will be launched in 2009, with members from both existing networks as well as new members and will support the future editions of this conference. The scope of EC-TEL 2008 covered the different fields of learning technologies: education, psychology, computer science. The contributions in this volume address the - sign of innovative environments, computational models and architectures, results of empirical studies on socio-cognitive processes, field studies regarding the use of technologies in context, collaborative processes, pedagogical scenarios, reusable learning objects and emerging objects, groups and communities, learning networks, interaction analysis, metadata, personalization,

collaboration scripts, learning adaptation, collaborative environments, resources, tangible tools, as well as learning management systems.

And for the frontline instructor, contributors offer proven strategies for using technologies to benefit students at all levels. For each technology covered, the Handbook: Explains how the technology fosters students' metacognitive or self-regulated learning. Identifies features designed to study or support metacognitive/SRL behaviors. Reviews how its specific theory or model addresses learners' metacognitive/SRL processes.
