Additive and Subtractive Manufacturing J. Paulo Davim,2020-01-20 Additive manufacturing (AM) and subtractive manufacturing (SM) offer numerous advantages in the production of single and multiple components. They provide incomparable design independence and are used to fabricate products in several industries, e.g.: aeronautic, automotive, biomedical, etc. The book presents recent results of processes including 3D printing, SLS (selective laser sintering), EBM (electron beam melting) and Precise Cutting and Drilling.

3D Technology in Fine Art and Craft Bridgette Mongeon, 2015-07-30 The possibilities for creation are endless with 3D printing, sculpting, scanning, and milling, and new opportunities are popping up faster than artists can keep up with them. 3D Technology in Fine Art and Craft takes the mystery out of these exciting new processes by demonstrating how to navigate their digital components and showing their real world applications. Artists will learn to incorporate these new technologies into their studio work and see their creations come to life in a physical form never before possible. Featuring a primer on 3D basics for beginners, interviews, tutorials, and artwork from over 80 artists, intellectual property rights information, and a comprehensive companion website, this book is your field guide to exploring the exhilarating new world of 3D. Follow step-by-step photos and tutorials outlining the techniques, methodologies, and finished products of master artists who have employed 3D technology in new and inventive ways Learn how to enlarge, reduce, and repurpose existing artwork and create virtual pieces in physical forms through a variety of mediums Research your options with an accessible list of pros and cons of the various software, 3D printers, scanners, milling machines, and vendors that provide services in 3D technology Listen to podcasts with the artists and learn more tips and tricks through the book's website at www.digitalsculpting.net

High Definition, 2014-03-14 A pioneering title, High Definition explores theonslaught of new and highly accurate digital metrology tools inlarge- and small-scale 3-D scanning and 3-D modelling. Capable ofmeasuring space to an accuracy of less than 1 mm, these tools offerunprecedented precision for the development and interrogation ofdesign before, during and post production. Over the last decade orso, the array of designers' digital tools to propose and maketheir ideas have evolved significantly, but the absence of highaccuracy, zero-tolerance design production has often remained the missing piece between design and fulfilment. Innovative technologies are thus substantially recalibrating the way that designers operate in the world between the drawn and the made, having the power to transform the architect's role from thatof visualiser to one that is intensely involved with therealisation of objects and buildings. High Definition willexamine the capabilities of advanced technologies in designproduction through their impact on design theory, practice andgreater levels of collaboration between design and manufacturing. It will permeate the entangled world between means and meaning andunravel a new understanding between the representation and production of architectural design. Contributors include: Philip Beesley, Centre for AdvancedSpatial Analysis, Gehry Technologies, Ruairi Glynn, Zaha HadidArchitects, ScanLAB Projects, Territorial Agency, Skylar Tibbits, Mike Webb.

Radiomics in Gastric Cancer Bo Zhang, Damiano Caruso, 2023-12-28 Gastric cancer (GC) is one of the most common malignancies worldwide. It is particularly challenging due to common detection at the advanced stages of the diseases preventing potential therapeutic and treatment strategies for patients. Common forms of treatment include chemotherapy which has been found to improve the survival rate and overall quality of life for patients with unresectable, locally advanced or at the metastatic stages of the disease. However, chemotherapy has also proven to cause significant side effects in some patients. Lymphatic metastasis has been found to be common in gastric cancer patients. Lymph vascular invasion (LVI) has been identified to be associated to the infiltration of tumor cells in the arteries, veins or lymphatic vessels. This has been identified to prompt local recurrence and the distant metastasis of various tumors. This has led to the LVI status as an independent prognostic factor and studies have found the occurrence of pathological LVI is associated with gastric cancer progression and linked to poor clinical prognosis and low survival rate.

Advances and Current Trends in Biomechanics Jorge Belinha, José Carlos Reis Campos, Elza Fonseca, Maria Helena Figueiral Silva, Maria Arcelina Marques, Maria Fernanda Gentil Costa, Susana Oliveira, 2021-09-29 This volume presents a collection of peer-reviewed papers on several areas in the field of biomechanics, including biofabrication; biomaterials; cardiovascular biomechanics, biofluids and hemodynamics; biomechanics of the injury/impact; biomechanics of rehabilitation; sports biomechanics; biomechanics of the skull and spine; biomechanics of the musculoskeletal system; biomechanics orofacial; orthopaedic biomechanics; experimental and numerical biomechanics; tissue engineering, and biomedical devices. A collection of novelties and research outcomes presented at the 9th National Biomechanics Congress (CNB 2021, 19-20 February, Porto, Portugal), this book reflects the enthusiasm and intense activity of the Portuguese biomechanical community, as well as the multidisciplinary character of the field. The National Congress of

The volume reflects the progress of Biomedical Engineering and discusses problems and solutions. It aims to identify new challenges, and shaping future directions for research in biomedical engineering fields including medical instrumentation, bioinformatics, biomechanics, medical imaging, drug delivery therapy, regenerative medicine and entrepreneurship in medical devices.

New Insights into the Iron Age Archaeology of Edom, Southern Jordan Erez Ben-Yosef, Thomas E. Levy, Mohammad Najjar, 2014-12-31 Situated south of the Dead Sea, near the famous Nabatean capital of Petra, the Faynan region in Jordan contains the largest deposits of copper ore in the southern Levant. The Edom Lowlands Regional Archaeology Project (ELRAP) takes an anthropological-archaeology approach to the deep-time study of culture change in one of the Old World's most important locales for studying technological development. Using innovative digital tools for data recording, curation, analyses, and dissemination, the researchers focused on ancient mining and metallurgy as the subject of surveys and excavations related to the Iron Age (ca. 1200-500 BCE), when the first local, historical state-level societies appeared in this part of the eastern Mediterranean basin. This comprehensive and important volume challenges the current scholarly consensus concerning the emergence and historicity of the Iron Age polity of biblical Edom and some of its neighbors, such as ancient Israel. Excavations and radiometric dating establish a new chronology for Edom, adding almost 500 more years to the Iron Age, including key periods of biblical history when David, Solomon, and the Egyptian pharaoh Shosheng I are alleged to have interacted with Edom. Included is a 7 gigabyte DVD with over 55,000 files of additional data and photographs from the project.
