Speech in an Artificial Atmosphere (44% Oxygen-56% Helium) Charles W. Nixon, Frank Trimboli, William E. Mabson, James E. Endicott, B. E. Welch, 1966 Intelligibility and physical characteristics of helium speech were investigated during a simulated space mission at Brooks Air Force Base, Texas. Speech was produced under conditions of room air at ground level, 100% oxygen at 18,000 feet, 56% helium-44% oxygen at 18,000 feet, and 80% helium-20% oxygen at ground level. Results of both objective and subjective analyses of the data show that (1) word intelligibility in the 80% helium condition was less than in room air, (2) when in the presence of noise, intelligibility was less in both 56% and 80% helium mixtures than in room air, (3) the high fundamental pitch observed immediately upon entering the helium atmosphere gradually decreased, but did not return to the prehelium level of pitch, (4) measured rate of speaking was unaffected, and (5) mean second formant frequencies were 1.35 times higher in 56% helium and 1.62 times higher in 80% helium than in room air. Observed ratios were slightly less than ratios predicted on the basis of velocity of sound in the vocal tract. (Author).

Helium Speech Translation Using Homomorphic Techniques Roy F. Quick, 1970 The application of advanced digital-processing techniques has great potential for systems that transmit voice or utilize information coded in the form of speech. The report employs a digital process that offers a new approach for general use in speech synthesis, and is an application of homomorphic methods to the problem of correcting the distorted speech of talkers in pressurized helium-oxygen atmospheres. The vocal-tract impulse response of such speech was extracted by the homomorphic deconvolution technique, and its frequency components were moved downward in frequency according to correction formulas given in a study by Gerstman (1966). Both linear and nonlinear frequency corrections were used. Speech samples taken at 800-foot pressure depth in a 96 percent helium, 4 percent oxygen atmosphere were processed in this way, using a digital simulation of Oppenheim's (1969) analysis-synthesis system. Results indicate considerable promise for the technique as a tool for further study of helium speech, and perhaps as a future on-line translation method. (Author).

Underwater Medicine and Related Sciences Margaret F. Werts, Charles W. Shilling, 2012-12-06 This volume is the third annotated bibliography on this subject area to be compiled by these authors. The first, published by Gordon and Breach, Science Publishers, in 1971, was entitled AN ANNOTATED BIBLIOGRAPHY ON DIVING AND SUBMARINE MEDICINE. It covered material published during the 1960's. The second volume, entitled UNDERWATER MEDICINE AND RELATED SCIENCES: A GUIDE TO THE LITERATURE, published in 1973 by Plenum Press, covered primarily material published during 1970 and 1971, with some material from 1968 and 1969. The present volume covers material published during 1972 and 1973, but here again some earlier material has been included. The purpose of these annotated bibliographies is to make available a large proportion of the published material, in abstract form, indexed in such a manner as to make it possible to compile a reasonably complete annotated bibliography on any specific subject area in the field. It is possible thus to learn where the work is being done, by whom, and how extensively. Also, it becomes obvious what areas of research are lacking or inadequate. These specific searches can also form a background of reference material on which to base further research, or from which to write monographs or state-of-the-art surveys. Papers, articles and reports listed here are in most cases readily available.

Speech in an Artificial Atmosphere (30% Helium-70% Oxygen) Charles W. Nixon, William E. Mabson, Frank Trimboli, B. E. Welch, 1967 During a simulated space mission, speech was analyzed to investigate the effects on communication of a 56-day exposure to a cabin atmosphere composed of 30% helium and 70% oxygen at an altitude of 27,000 feet. Results of physical and subjective analyses indicated: (1) Word intelligibility was satisfactory so long as the level of ambient noise in the speech frequency range did not exceed the speech level. (2) Fundamental frequency remained relatively unaffected by the 30% helium-70% oxygen gas mixture. (3) Mean second and third formant frequencies were 1.109 and 1.079 times higher in the helium exposure than in the initial ground level condition. (4) There was no adaptation in formant frequency shift as a function of time in the helium mixture, however, some persistency effects were seen during the post-exposure condition. (5) Calculated velocity of sound ratios were found to overestimate the measured amount of formant shift by a mean factor of 0.05 for the 30% helium mixture. (6) Speech quality was judged to deteriorate with increased duration of exposure to the 30% helium mixture. Comparisons were made between these findings and the results of a previous study which investigated speech produced in a 56% helium-44% oxygen atmospheric mixture. (Author).

The Underwater Handbook Charles Shilling, 2013-11-11 This handbook attempts to translate data on various parameters of man's capability in underwater and hyperbaric environments for those without a background in the life sciences. Accomplishing any multifaceted task requires team work, and effective team work depends on facile communication among all participants. To communicate properly, all parties must understand each other's problems and be able to speak a similar language. To this end we believe that this publication will go a long way in furthering the understanding and communication necessary for maximum achievement. The U. S. Navy has a fundamental interest in all types of activities connected with the ocean and is especially interested in the growing field of manned underwater and hyperbaric activities. Thus, the manuscript for this comprehensive book was developed under Office of Naval Research contract N00014-67-A-0214-0013 with The George Washington University. We acknowledge with appreciation the financial support and technical guidance for this undertaking by the Naval Medical Research and Development Command of the Bureau of Medicine and Surgery as well as by the Engineering Psychology Program and the Physiology Program of the Office of Naval Research. JOSEPH P. POLLARD Director Biological and Medical Sciences Division Office of Naval Research vii Preface A need was felt for a book that would document the relationship of the human being to the underwater hyperbaric environment in such a way that the individual unfamiliar with the psychological or biomedical jargon could still understand and appreciate the information.

Why You Hear what You Hear Eric J. Heller, 2013 This title makes possible a deep intuitive understanding of many aspects of sound, as opposed to the usual approach of mere description. This goal is aided by hundreds of original illustrations and examples, many of which the reader can reproduce and adjust using the same tools used by the author.

Engineering and Health in Compressed Air Work F.M. Jardine, R.I. McCallum, 2005-10-27 This book is the record of the conference held in Oxford in 1992 organised by CIRIA, and co-sponsored by the Health and Safety Executive, The British Tunnelling Society and the Medical Research Council's Hyperbaric Sciences Panel. The book consolidates international medical and engineering knowledge and experience on the use of compressed air and hyperbaric techniques, and looks to how they can be safely used in the future.

Underwater Research E.A. Drew, 2013-07-19 Underwater Research is primarily a review of problems in underwater viewing and hearing and acoustics. The chapters in this book are papers collated from the symposia of the Underwater Association. This book explores the need for the further study of the physiological and psychological reactions of divers. The book also concludes that diving is still the best way in studying the benthic ecology and sunken wrecks and cities. The text is divided into 25 detailed chapters. Most of the topics in the text address the common problems encountered by divers such as in hearing and viewing. Specifically, problems in diver communication, depth estimation, color distinction are some of the topics covered. Other chapters deal with the psychological reactions such as anxiety, narcosis, and visual attention. Also, some chapters tackle solutions and experiments for the improvement of diving techniques and equipment. This reference is helpful to divers, students, and scientists involved in marine and environmental science.

Underwater Acoustic Digital Signal Processing and Communication Systems Robert Istepanian,Milica Stojanovic,2013-03-09 Underwater acoustic digital signal processing and communications is an area of applied research that has witnessed major advances over the past decade. Rapid developments in this area were made possible by the use of powerful digital signal processors (DSPs) whose speed, computational power and portability allowed efficient implementation of complex signal processing algorithms and experimental demonstration of their performance in a variety of underwater environments. The early results served as a motivation for the development of new and improved signal processing methods for underwater applications, which today range from classical of autonomous underwater vehicles and sonar signal processing, to remote control underwater wireless communications. This book presents the diverse areas of underwater acoustic signal processing and communication systems through a collection of contributions from prominent researchers in these areas. Their results, both new and those published over the past few years, have been assembled to provide what we hope is a comprehensive overview of the recent developments in the field. The book is intended for a general audience of researchers, engineers and students working in the areas of underwater acoustic signal processing. It requires the reader to have a basic understanding of the digital signal processing concepts. Each topic is treated from a theoretical perspective, followed by practical implementation details. We hope that the book can serve both as a study text and an academic reference.
