Shackleton's Antarctic journey took courage and perseverance. Now his story is told in a full-color early chapter book! In 1914, Ernest Shackleton and his crew set out for the South Pole. They never made it. Within sight of land, the ship ran into dangerous waters filled with chunks of ice. Then the sea froze around them! There was no hope of rescue. Could Shackleton find a way to save himself and his men?

Women on Ice Miriam Boeri,2013-01-15

Methamphetamine (ice, speed, crystal, shard) has

been called epidemic in the United States. Yet few communities were ready for increased use of methamphetamine by suburban women. *Women on Ice* is the first book to study exclusively the lives of women who use the drug and its effects on their families. In-depth interviews with women in the suburban counties of one of the largest metropolitan areas in the U.S. chronicle the details of their initiation into methamphetamine, the turning points into problematic drug use, and for a few, their escape from lives veering out of control. Their life course and drug careers are analyzed in relation to the intersecting influences of social roles, relationships, social/political structures, and political trends. Examining the effects of punitive drug policy, inadequate social services, and looming public health risks, including HIV/AIDS and hepatitis C, the book gives voice to women silenced by shame. Boeri introduces new and developing concepts in the field of addiction studies and proposes policy changes to more broadly implement initiatives that address the problems these women face. She asserts that if we are concerned that the war on drugs is a war on drug users, this book will alert us that it is also a war on suburban families.

conferences is to promote all aspects of marine design as an engineering discipline. The focus is on key design challenges and opportunities in the area of current maritime technologies and markets, with special emphasis on:

- Challenges in merging ship design and marine applications of experience-based industrial design
- Digitalisation as technological enabler for stronger link between efficient design, operations and maintenance in future
- Emerging technologies and their impact on future designs
- Cruise ship and icebreaker designs including fleet compositions to meet new market demands

To reflect on the conference focus, Marine Design XIII covers the following research topic series:

- State of art ship design principles - education, design methodology, structural design, hydrodynamic design;
- Cutting edge ship designs and operations - ship concept design, risk and safety, arctic design, autonomous ships;
- Energy efficiency and propulsions - energy efficiency, hull form design, propulsion equipment design;
- Wider marine designs and practices - navy ships, offshore and wind farms and production.

Marine Design XIII contains 2 state-of-the-art reports on design methodologies and cruise ships design, and 4 keynote papers on new directions for vessel design practices and tools, digital maritime traffic, naval ship designs, and new tanker design for arctic. Marine Design XIII will be of interest to academics and professionals in maritime technologies and marine design.

### **The Unsinkable Titanic Allen Gibson,2012-02-28**

Delving deep into Titanic's legacy, Allen Gibson presents a comprehensive history with a refreshing argument, that Titanic represented a considerable achievement in maritime architecture. He determines the true causes of the disaster, telling the story of the 'unsinkable' ship against a backdrop of a tumultuous and rapidly emerging technological world. The book exposes the true interests of the people involved in the operation, regulation and investigation into Titanic, and lays bare the technology so dramatically destroyed. Juxtaposing the duelling worlds of economics and safety, this study rationalises the mindset that wilfully dispatched the world's largest ship out to sea with a deficient supply of lifeboats.

### Formation, Growth, and Decay of Sea Ice in the Canadian Arctic Archipelago Michael A.

Bilello,1960 Freeze-up at Alert, Eureka, Isachsen, Mould Bay, and Resolute in the Canadian Arctic was observed to occur any time between the last week in August and the last week in September. A mathematical relationship between air temperature and sea-ice formation provided a favorable method for predicting the date of freeze-up at these stations. The maximum seasonal growth of sea ice, 269 cm, was measured at Isachsen; the minimum, 149 cm, was measured at Resolute. These values are based on measurements made at the five stations in the Canadian Arctic Archipelago having a total of 35 station years of record. Equations to predict the growth of sea ice by increments were derived

empirically from the observations made at these locations. A separate term is introduced in the equations to take account of the effects of snow-cover depths on ice growth. To apply the formulas only air-temperature and snow-depth data are required. The study disclosed good correlation between air temperature and decrease in sea-ice thickness at the Arctic stations. The relationship was found to be:  $h = 0.55 \sigma \theta$  where  $h$  = decrease in ice thickness (cm) and  $\sigma \theta$  = accumulated degree days (above  $-1.8^{\circ}\text{C}$ ). (Author).

Subjectivism and Interpretative Methodology in Theory and Practice Fu-Lai Tony Yu, 2020-02-15  
“Subjectivism and Interpretative Methodology in Theory and Practice” uses the subjectivist approach originated in Max Weber’s interpretation method, Alfred Schutz’s phenomenology, and Peter Berger and Thomas Luckmann’s sociology of knowledge to understand economic and social phenomena. This method brings human agency back into the forefront of analysis, adding new insights not only in economics and management, but also in sociology, politics, psychology and organizational behavior.

**Phase Three Alert** John Ball,

**Climate Alert** Yuzhu You, Ann Henderson-Sellers, 2010 Climate change is particularly visible in Australia with globally recognised icons, such as the Great Barrier Reef, the Murray-Darling River, Antarctica and the surrounding oceans, all deeply vulnerable and already under attack. As a nation with a rich environmental heritage our response to climate change, as individuals and policymakers, relies on an

accurate understanding of the current state and evidence of intervention efficacy. Climate Alert presents scholarly research on climate change monitoring and strategy. It covers a diverse range of today's issues and seeks to promote climate change monitoring as an essential tool in both effective mitigation and urgent adaptation.
