26 Songs in 30 Days Greg Vandy, Daniel Person, 2016-04-12

A fascinating portrait of icon Woody Guthrie, the Pacific Northwest, and folk music—all set against the backdrop of a tumultuous moment in American history. In 1941, Woody Guthrie wrote 26 songs in 30 days—including classics like “Roll On Columbia” and “Pastures of Plenty”—when he was hired by the Bonneville Power Administration to promote the benefits of cheap hydroelectric power, irrigation, and the Grand Coulee Dam. Now, KEXP DJ Greg Vandy takes readers inside the unusual partnership between one of America’s great folk artists and the federal government, and shows how the American folk revival was a response to hard times. *26 Songs In 30 Days* plunges deeply into the historical context of the time and the progressive politics that embraced Social Democracy during an era in which the United States had been severely suffering from The Great Depression. And though this is a musical history of a vibrant American musical icon and a specific part of the country, it couldn’t be a better reminder of how timeless and expansive such topics are in today’s political discourse.

Practical Aspects of Declarative Languages Shriram

Krishnamurthi, C.R. Ramakrishnan, 2003-06-30 Declarative languages build on sound theoretical bases to provide attractive frameworks for application development. These languages have been successfully applied to a wide variety of real-world situations including database management, active networks, software engineering, and decision-support systems. New developments in theory and implementation expose fresh opportunities. At the same time, the application of declarative languages to novel problems raises numerous interesting research issues. These well-known questions include scalability, language extensions for application deployment, and programming environments. Thus, applications drive the progress in the theory and implementation of declarative systems, and in turn benefit from this progress. The

International Symposium on Practical Applications of Declarative Languages (PADL) provides a forum for researchers, practitioners, and implementors of declarative languages to exchange ideas on current and novel applications and on the requirements for effective use of declarative systems. The fourth PADL symposium was held in Portland, Oregon, on January 19 and 20, 2002.

Two Studies in Gas-Phase Ion Spectroscopy Matthew J.

Simpson, 2011-10-15 In this thesis Matthew Simpson reports two areas of work in gas ion spectroscopy, each investigation in itself worthy of a PhD. The first study uses tunable vacuum-ultraviolet radiation from a synchrotron to identify negative ions from twenty four photoexcited polyatomic molecules in the gas phase. From these experiments, Matthew collects a vast amount of data and summarises and reviews ion-pair formation from polyatomic molecules. The second study is on selected ion flow tube mass spectrometry. Matthew investigates the reactions of cations and anions with ethene, monofluoroethene, 1,1-difluoroethene and tetrafluoroethene. In this study Matthew tries to explain why certain products are formed preferentially over other products at a microscopic level of understanding. The data recorded in this thesis form the most comprehensive collection of information about anion formation and are the basis of a review and numerous articles in specialist journals.

Of Potato Heads and Polaroids Mike McCready, 2017-05-30
Pearl Jam. Not many bands have achieved a status needing no adjective or description. Pearl Jam has. And fewer still have had an insider, much less a member, obsessively capture onstage and offhand pics of the experience-the friends, family, and fans...and one very famous plastic toy. Luckily for us lead guitarist Mike McCready did trusty Polaroid camera in hand. Documenting years of touring and travels, McCready snaps meetings with heroes and inspirations from all walks of life; time spent with crazy friends and family; and moments featuring wildly artistic takes on art, nature, and architecture. Also: he once rocked a fab grey shift. And true to form for one not taking things too seriously, Mike sometimes had his pal, Mr. Potato Head, pop in and share in the fun. As wonderfully intimate as group selfies with the likes of Neil Young, Questlove, Jimmy Page, Ann and Nancy Wilson, Joey Ramone, Johnny Ramone, The Edge, Ben Harper, Peter Buck, Paul McCartney, Mike Mills, Sting, Macklemore and Ryan Lewis, Carrie Brownstein, Robert Plant, Peter Dinklage, Dave Grohl, Gene Simmons, Bono, Jack White, Danny Clinch, Lady Gaga, Laura Dern, Dustin Hoffman, Judd Apatow, Will Ferrell, Leslie Mann, Jimmy Fallon, Mira Sorvino, Tim Robbins, Hugh Jackman, Venus Williams, and Kate Hudson are, it's the massive homage to the band's fans taken from stage view, in places from the Pacific Northwest to Peru, from Brussels to Bolivia, that brings McCready's manic intimacy come roaring to life. *Of Potato Heads and Polaroids* is the scrapbook for our rockstar world-friends, family, and fans. With some wattage. And a great deal of fun and good times.

Financial Risk Management Jimmy Skoglund,Wei Chen,2015-09-04 A global banking risk management guide geared toward the practitioner Financial Risk Management presents an in-depth look at banking risk on a global scale, including comprehensive examination of the U.S. Comprehensive Capital Analysis and Review, and the European Banking Authority stress tests. Written by the leaders of global banking risk products and management at SAS, this book provides the most up-to-date information and expert insight into real risk management. The discussion begins with an overview of methods for computing and managing a variety of risk, then moves into a review of the economic foundation of modern risk management and the growing importance of model risk management. Market risk, portfolio credit risk, counterparty credit risk, liquidity risk, profitability analysis, stress testing, and others are dissected and examined, arming you with the strategies you need to construct a robust risk management system. The book takes readers through a journey from basic market risk analysis to major recent advances in all financial risk disciplines seen in the banking industry. The quantitative methodologies are developed with ample business case discussions and examples illustrating how they are used in practice. Chapters devoted to firmwide risk and stress testing cross reference the different methodologies developed for the specific risk areas and explain how they work together at firmwide level. Since risk regulations have driven a lot of the recent practices, the book also relates to the current global regulations in the financial risk areas. Risk management is one of the fastest growing segments of the banking industry, fueled by banks'

fundamental intermediary role in the global economy and the industry's profit-driven increase in risk-seeking behavior. This book is the product of the authors' experience in developing and implementing risk analytics in banks around the globe, giving you a comprehensive, quantitative-oriented risk management guide specifically for the practitioner. Compute and manage market, credit, asset, and liability risk Perform macroeconomic stress testing and act on the results Get up to date on regulatory practices and model risk management Examine the structure and construction of financial risk systems Delve into funds transfer pricing, profitability analysis, and more Quantitative capability is increasing with lightning speed, both methodologically and technologically. Risk professionals must keep pace with the changes, and exploit every tool at their disposal. Financial Risk Management is the practitioner's guide to anticipating, mitigating, and preventing risk in the modern banking industry.

Energy Resources through Photochemistry and Catalysis Michael Gratzel, 2012-12-02 Energy Resources through Photochemistry and Catalysis reviews the state of the art in the development of energy conversion devices based on catalytic and photochemical reactions. The focus is on catalysis of redox reactions and their application to the photocleavage of water, reduction of carbon dioxide, and fixation of nitrogen. Some fundamental aspects of catalysis as it relates to processes of light energy harvesting and charge separation in photochemical or photoelectrochemical conversion systems are also discussed. This monograph is comprised of 16 chapters covering light-induced redox reactions and reaction dynamics in organized assemblies such as micelles, colloidal metals, or semiconductors, together with strategies for molecular engineering of artificial photosynthetic devices. The principles of electrochemical conversion of light energy via semiconductor electrodes or semiconducting particles are also considered. Furthermore, thermodynamic characteristics for some reactions that can be

utilized for storage of solar energy in the form of chemical energy are examined. The remaining chapters look at the role of porphyrins in natural and artificial photosynthesis; the use of semiconductor powders and particulate systems for photocatalysis and photosynthesis; and hydrogen-generating solar cells based on platinum-group metal activated photocathodes. This text will be a useful resource for scientists and policymakers concerned with finding alternative sources of energy.

Kinetics of Ion-Molecule Reactions Pierre J.

Ausloos, 2012-12-06 The investigation of the elementary reactions of reactive intermediate species began about half a century ago with the advent of free radical kinetics as an active area of chemical research. In spite of the relatively greater ease of detection of a species carrying an electrical charge, and the fact that organic chemists had for decades postulated mechanisms involving ionic intermediates, the systematic study of the elementary reactions of ions was delayed for more than twenty years after the first beginnings of free radical kinetics. Even at this writing, in 1978, the word kinetics is considered by many chemists to be synonymous with kinetics of neutral species. Yet in spite of the relatively late start and separation from the mainstream of kinetics, the field of ion physics and chemistry is flourishing, and growing at an ever faster pace. Instrumentalists devise ever more sophisticated apparatuses with capabilities of delving into nearly every aspect of the interactions between ions and molecules. Even satellites orbiting the earth are now being used effectively to determine rate coefficients of ionospheric ion-neutral reactions, some of which can not as yet be measured in the laboratory.

The Use of Ice on Small Fishing Vessels Michael

Shawyer, A. F. Medina Pizzali, Food and Agriculture Organization of the United Nations, 2003 The use of ice on board smaller fishing vessels is increasing, due to factors such as the growing demand for fresh fish, market globalisation and increased quality controls, and the decrease in near-shore fish resources which forces

fisherman to make longer fishing trips and use ice to preserve the freshness of their catch. This publication describes the requirements for the use of ice and chilled seawater on fishing vessels, from small insulated containers in dugout canoes, to refrigerated tanks on bigger vessels.
