The Power of Positive Parenting Matthew R. Sanders, Trevor G. Mazzucchelli, 2017-12-11 Safe, nurturing, and positive parent-child interactions lay the foundations for healthy child development. How children are raised in their early years and beyond affects many different aspects of their lives, including brain development, language, social skills, emotional regulation, mental and physical health, health risk behavior, and the capacity to cope with a spectrum of major life events. As such, parenting is the most important potentially modifiable target of preventive intervention. The Power of Positive Parenting provides an in-depth description of Triple P, one of the most extensively studied parenting programs in the world, backed by more than 30 years of ongoing research. Triple P has its origins in social learning theory and the principles of behavior, cognitive, and affective change, and its aim is to prevent severe behavioral, emotional, and developmental problems in children and adolescents by enhancing the knowledge, skills, and confidence of parents. Triple P incorporates five levels of intervention on a tiered continuum of increasing strength for parents of children from birth to age 16. The programs comprising the Triple P system are designed to create a family-friendly environment that better supports parents, with a range of programs tailored to their differing needs. This volume draws on the editors' experience of developing Triple P, and chapters address every aspect of the system, as well as how it can be applied to a diverse range of child and parent problems in different age groups and cultural contexts.

The Cartiers Francesca Cartier Brickell, 2021-06-08 "A dynamic group biography studded with design history and high-society dash . . . [This] elegantly wrought narrative bears the Cartier hallmark."—The Economist The "astounding" (André Leon Talley) story of the family behind the Cartier empire and the three brothers who turned their grandfather's humble Parisian jewelry store into a global luxury icon—as told by a great-granddaughter with exclusive access to long-lost family archives "Ms. Cartier Brickell has done her grandfather proud."—The Wall Street Journal The Cartiers is the revealing tale of a jewelry dynasty—four generations, from revolutionary France to the 1970s. At its heart are the three Cartier brothers whose motto was "Never copy, only create" and who made their family firm internationally famous in the early days of the twentieth century, thanks to their unique and complementary talents: Louis, the visionary designer who created the first men's wristwatch to help an aviator friend tell the time without taking his hands off the controls of his flying machine; Pierre, the master dealmaker who bought the New York headquarters on Fifth Avenue for a double-stranded natural pearl necklace; and Jacques, the globe-trotting gemstone expert whose travels to India gave Cartier access to the world's best rubies, emeralds, and sapphires, inspiring the celebrated Tutti Frutti jewelry. Francesca Cartier Brickell, whose great-grandfather was the youngest of the brothers, has traveled the world researching her family's history, tracking down those connected with her ancestors and discovering long-lost pieces of the puzzle along the way. Now she reveals never-before-told dramas, romances, intrigues, betrayals, and more. The Cartiers also offers a behind-the-scenes look at the firm's most iconic jewelry—the notoriously cursed Hope Diamond, the Romanov emeralds, the classic panther pieces—and the long line of stars from the worlds of fashion, film, and royalty who wore them, from Indian maharajas and Russian grand duchesses to Wallis Simpson, Coco Chanel, and Elizabeth Taylor. Published in the two-hundredth anniversary year of the birth of the dynasty's founder, Louis-François Cartier, this book is a magnificent, definitive, epic social history shown through the deeply personal lens of one legendary family.

The Diabetes Textbook Joel Rodriguez-Saldana,2019-06-27 Diabetes has become a worldwide health problem, the global estimated prevalence approaches ten percent and the burden of this disease in terms of morbidity and mortality is unprecedented. The advances acquired through the knowledge of the mechanisms of the disease and the variety of therapeutic approaches contrast with the inability of private and public health systems in underdeveloped and even developed countries to achieve the goals of treatment. This paradox has been described in many sources: the surge of scientific advances contrast with an unprecedented amount of human suffering. Thus, a patient centered and an evidence based approach with the capacity to produce measurable clinical and economic outcomes is required. The purpose of this textbook is multiple: to offer a comprehensive resource covering all aspects of outpatient management; to address diabetes as a health problem from an epidemiological, economic and clinical perspective; to discuss the role of social determinants of health on the worldwide increase in diabetes; to highlight the challenges and obstacles in providing adequate care; and to outline a multidisciplinary approach to management in which medical visits retain their importance as part of a team comprising the patient, his or her family and a multidisciplinary group of health professionals who are able to move beyond the traditional approach of diabetes as a disease and greatly improve outcomes.

Functional Fitness for Adults Living with Down Syndrome Pieter-Henk Boer,2022-07-29 The purpose of this book is to provide a specific group of adults living with intellectual disability, namely Down syndrome (DS), their own unique instrument to assess functional fitness. Previously, individuals living with DS were pooled with individuals living with ID without DS, even though the presence of DS negatively affects functional fitness test performance. The need arose since many adults living with Down syndrome have poor functional ability, live sedentary lives and are overweight or obese. Functional fitness includes parameters such as flexibility, balance, aerobic capacity, functional capacity and muscular strength and endurance. The 14 test items presented in this functional fitness test battery were carefully selected after numerous literature studies and consultations with scholars and specialists who are experienced in working with adults living with DS. Also, extensive pilot studies were conducted in order to select test items best suited to the needs of adults living with Down syndrome. The feasibility, reliability, and validity were determined specifically for adults living with DS. This scholarly book provides an economical and field-based list of test items that can be used to assess, evaluate, and monitor functional fitness. The book aims to contribute to the scientific discourse, reflecting on the functional limitations seen in adults living with DS.

Aging and Age-related Diseases Michał Karasek,2006 Ageing has become a great problem for many countries. Due to world-wide life prolongation the number of people over 60 years old has grown rapidly into a ten percent piece of

the world population. The growing age of the world population raises many social, economical, and medical problems. The proportion of people in the economically active age groups to those who are over 65 is constantly decreasing. A major consequence of the increasing numbers of individuals in advanced age groups is increasing numbers of patients suffering from age-related diseases. The aim of this book is to present the basic data on human ageing as well as on age-related diseases.
