Origination Andy Pike, 2015-06-02 *Origination: The Geographies of Brands and Branding* offers innovative theoretical and conceptual frameworks relating to the ways that actors create meaning and value in commodity brands and branding through processes of geographical association. Provides innovative conceptualization and theorization to facilitate an understanding of the geographical dimensions of brands and branding Challenges current interpretations of brands as vehicles of homogenization in globalization Establishes the theoretical and conceptual foundations of a more geographically sensitive approach through rigorous empirical examination of the under-researched geographical differentiation of commodity brands and branding Presents innovative new research and analysis of the socio-spatial biographies of the Newcastle Brown Ale, Burberry and Apple brands Forges strong new connections between political and cultural economy approaches

within geography Provides a distinctive and incisive conceptual and theoretical framework capable of engaging other branded commodities and their branding in other times and places

Home Learning Environments for Young Children Cathy Nutbrown, Peter Clough, Kay Davies, Peter Hannon, 2022-04-07 By bringing together research evidence on effectively supporting parents to engage with their children's early learning, and the role of education professionals in developing partnerships with families, this book focuses on partnerships between professionals and parents to enhance family learning for young children in literacy and other aspects of early learning. The move towards setting, home-based, and online learning has accelerated, and it is important for both students and practitioners to value parents' roles in their young children's learning; to consider how parents can support young children's learning in these scenarios, and how to apply this in practice with children aged birth to five. Through a wealth of case studies from real experience, the authors showcase an inspiring range of inclusive projects and approaches with families, including marginalised groups such as bilingual learners, fostering families, and families identified as 'vulnerable' including imprisoned fathers and children with specific learning needs.

Owls in the Family - Literature Kit Gr. 3-4 Marie-Helen Goyette, 2008-03-01 Your students will get a hoot out of this story about a boy and his adventures with two owls. Target your students' need for independent reading skills. Demonstrate any prior knowledge on the subject of owls before reading the book. Find the word that best matches the vocabulary word from the novel. Show comprehension with multiple choice and true or

false questions. Explain why the owls didn't know how to fly, and why Billy didn't show them. Convert inches to centimeters to find out how tall Wol is and how wide his wingspread is. Rewrite a passage from the book in Weeps the owl's point of view. Complete a web to show Wol's encounters with each character from the story. Aligned to your State Standards and written to Bloom's Taxonomy, additional crossword, word search, comprehension quiz and answer key are also included. About the Novel: This is one of Farley Mowat's funniest books about a boy and two rescued owls named Wol and Weeps. Billy loves all animals. He has rats, mice, over thirty gophers and two dogs. It only seems natural that Billy and his friends search the sloughs and bluffs to find owlets. The boys rescue a pair of owlets from an untimely death, and end up keeping them for over three years. The adventures Billy, his friends and the owls have together are not typical. Participating in the local Pet Parade, owls following him to school, and having an owl arrive for dinner with a skunk are only a few funny incidents in *Owls in the Family*.

Computer Science Logo Style: Symbolic computing Brian Harvey, 1997 This series is for people--adults and teenagers--who are interested in computer programming because it's fun. The three volumes use the Logo programming language as the vehicle for an exploration of computer science from the perspective of symbolic computation and artificial intelligence. Logo is a dialect of Lisp, a language used in the most advanced research projects in computer science, especially in artificial intelligence. Throughout the series, functional programming techniques (including higher order functions and recursion) are emphasized, but traditional sequential programming is also used when appropriate. In the second edition, the first two volumes have been rearranged so that illustrative case studies

appear with the techniques they demonstrate. Volume 1 includes a new chapter about higher order functions, and the recursion chapters have been reorganized for greater clarity. Volume 2 includes a new tutorial chapter about macros, an exclusive capability of Berkeley Logo, and two new projects. Throughout the series, the larger program examples have been rewritten for greater readability by more extensive use of data abstraction. Volume 1 Symbolic Computing, is addressed to a reader who has used computers and wants to learn the ideas behind them. Symbolic computing is the manipulation of words and sentences, in contrast both to the graphics most people associate with Logo and to the numerical computation with which more traditional languages such as Pascal and C++ are most comfortable. This volume is well known for its clear and thorough presentation of recursion, a key idea in computer science that other texts treat as arcane and difficult. The Logo programs in these books and the author's free Berkeley Logo interpreter are available via the Internet or on diskette.
