*Applied Categorical and Count Data Analysis* Wan Tang,Hua He,Xin M. Tu,2023-04-06 Developed from the authors' graduate-level biostatistics course, *Applied Categorical and Count Data Analysis, Second Edition* explains how to perform the statistical analysis of discrete data, including categorical and count outcomes. The authors have been teaching categorical data analysis courses at the University of Rochester and Tulane University for more than a decade. This book embodies their decade-long experience and insight in teaching and applying statistical models for categorical and count data. The authors describe the basic ideas underlying each concept, model, and approach to give readers a good grasp of the fundamentals of the methodology without relying on rigorous mathematical arguments. The second edition covers classic concepts and popular topics, such as contingency tables, logistic regression models, and Poisson regression models, along with modern areas that include models for zero-modified count outcomes, parametric and semiparametric longitudinal data analysis, reliability analysis, and methods for dealing with missing values. As in the first edition, R, SAS, SPSS, and Stata programming codes are provided for all the examples, enabling readers to immediately experiment with the data in the examples and even adapt or extend the codes to fit data from their own studies. Designed for a one-semester course for graduate and senior undergraduate students in biostatistics, this self-contained text is also suitable as a self-learning guide for biomedical and psychosocial researchers. It will help readers analyze data with discrete variables in a wide range of biomedical and psychosocial research fields. Features: Describes the basic ideas underlying each concept and model Includes R, SAS, SPSS and Stata programming codes for all the examples Features significantly expanded Chapters 4, 5, and 8 (Chapters 4-6, and 9 in the second edition Expands discussion for subtle issues in longitudinal and clustered data analysis such as time varying covariates and comparison of generalized linear mixed-effect models with GEE

Count and Bishop in Medieval Germany Benjamin Arnold,2016-11-11 In this examination of the functions of lordship in a medieval society, Benjamin Arnold seeks answers to some of the most fundamental questions for the period of political and institutional history: How did the lords maintain control over the people, land, and resources? How was their rule sustained and justified? Arnold chooses to analyze the Eichstätt region, an area on the borders of three major German provinces: Bavaria, Franconia, and Swabia. The region was the geographical and political dimension within which succeeding bishops, with great tenacity and inventiveness, survived the threat of dominion by their secular neighbors, the counts. The bishops of Eichstätt were able to emerge with a durable territorial structure of their own, which they succeeded in recasting, between 1280 and 1320, into a credible and long-lasting principality. Modern ideas of political progress, Arnold contends, tend to be unfair to medieval institutions that have not left easily recognizable descendants. He argues that it would be more prudent to observe in the territorial fragmentation of Germany not the triumph of chaos but the outcome of a

reasonably orderly social and legal process that provided alternative institutions to those of a centralized or national monarchy.

Advanced Bioactive Compounds Countering the Effects of Radiological, Chemical and Biological Agents Grant N. Pierce,Volodymyr I. Mizin,Alexander Omelchenko,2014-07-08 The probability for exposure to damaging radiation, toxic chemicals in the environment and adverse biological agents has increased exponentially today. The more frequent and faster travel that we experience today also escalates the risk of contraction and transmission of potentially deadly infections. This has created a very real and escalating risk for injuries and deaths. This is accentuated in the military and medical staff that is more frequently exposed to radiological, chemical, and biological agents in their normal working environment. Understanding the mechanisms whereby these toxic agents inflict damage to our bodies is essential to prepare us for these challenges. Much of the damage is inflicted through the generation of free radicals and non-radical oxidants which then act through oxidative mechanisms to injury the body. This volume will discuss the damage caused by these radiological, chemical, and biological environmental stressors, the mechanisms through which the damage can occur and the novel strategies that can be used to reduce the injury inflicted by these toxic compounds. Using basic and clinical research approaches, the contents of this book discuss new ideas for the development of bioactive products and environmental approaches to lessen or negate the biological damage inflicted by these noxious compounds.

Struggles for Political Change in the Arab World Lisa Blaydes,Amr Hamzawy,Hesham Sallam,2022-10-11 The advent of the Arab Spring in late 2010 was a hopeful moment for partisans of progressive change throughout the Arab world. Authoritarian leaders who had long stood in the way of meaningful political reform in the countries of the region were either ousted or faced the possibility of political if not physical demise. The downfall of long-standing dictators as they faced off with strong-willed protesters was a clear sign that democratic change was within reach. Throughout the last ten years, however, the Arab world has witnessed authoritarian regimes regaining resilience, pro-democracy movements losing momentum, and struggles between the first and the latter involving regional and international powers. This volume explains how relevant political players in Arab countries among regimes, opposition movements, and external actors have adapted ten years after the onset of the Arab Spring. It includes contributions on Egypt, Morocco, Kuwait, Saudi Arabia, Syria, Algeria, Sudan, Lebanon, Iraq, Jordan, Yemen, and Tunisia. It also features studies on the respective roles of the United States, China, Iran, and Turkey vis-à-vis questions of political change and stability in the Arab region, and includes a study analyzing the role of Saudi Arabia and its allies in subverting revolutionary movements in other countries.
