Rules for Revolutionaries Becky Bond, Zack Exley, 2016-11-09 Lessons from the groundbreaking grassroots campaign that helped launch a new political revolution *Rules for Revolutionaries* is a bold challenge to the political establishment and the “rules” that govern campaign strategy. It tells the story of a breakthrough experiment conducted on the fringes of the Bernie Sanders presidential campaign: A technology-driven team empowered volunteers to build and manage the infrastructure to make seventy-five million calls, launch eight million text messages, and hold more than one-hundred thousand public meetings—in an effort to put Bernie Sanders’s insurgent campaign over the top. Bond and Exley, digital iconoclasts who have been reshaping the way politics is practiced in America for two decades, have identified twenty-two rules of “Big Organizing” that can be used to drive social change movements of any kind. And they tell the inside story of one of the most amazing grassroots political campaigns ever run. Fast-paced, provocative, and profound, *Rules for Revolutionaries* stands as a liberating challenge to the low expectations and small thinking that dominates too many advocacy, non-profit, and campaigning organizations—and points the way forward to a future where political revolution is truly possible.

It delivers the requisite tools and instruction for optimizing patient communication, performing assessments, and providing effective care of chronic conditions. Moving step-by-step from simple to complex information, the resource de-mystifies the process of telephonic nursing care and describes numerous tools such as learning outcomes, algorithms, exercises to reinforce learning, case studies, and critical thinking questions that help readers develop and hone telehealth nursing

Workplace Monitoring and Technology Jacek Woźniak,2022-08-26 Workplace Monitoring and Technology aims to showcase results of research and explanatory theories that influence employees' acceptance of the fact that work is monitored using ICT-based monitoring tools. Work monitoring, understood as obtaining, storing and reporting the results of collected observations, has always been a managerial task. Traditionally it was carried out by supervisors who, while overseeing the work of employees, would draw conclusions from their observations and implement corrective actions. The use of information and communication technologies (ICT) to monitor the working employee and their

performance has changed the methods of monitoring, and the popularization of remote work has increased interest in searching for new monitoring systems using the full potential of new ICT solutions. The new developments in ICT have caused smart monitoring systems and new solutions to evolve in electronic work monitoring based on the Internet of Things and Artificial Intelligence, which enables nearly cost-free monitoring. However, scientific knowledge about them is limited, and above all, so is managerial knowledge about the reception of these tools by employees, while their misuse can cause considerable damage. Presenting a broad overview of the current state of different areas of scientific knowledge regarding smart and electronic monitoring systems of work performance, this book will be of relevance for academics within the fields of human resource management and performance management, and for similar groups of researchers in psychology and sociology.
