Building a Release Pipeline with Team Foundation Server 2012 Larry Brader,Roberta Leibovitz,Jose Luis Soria Teruel,2013-10-04 You're expected to produce releases at an ever-increasing rate. You're under pressure to add new features and deploy to customers sometime between your first cup of coffee in the morning and lunch, if you have time to eat it. In the meantime, you have the same release processes you've always had and it's got problems. Maybe there's some automation, but there's room for lots of improvement. Manual steps are everywhere, everyone has a different environment, and working all weekend to get a release into production is normal. One of the biggest problems is that changing how your software is released won't happen by waving a magic wand or writing a memo. It comes through effort, time, and money. That takes commitment from every group involved in the software process: test, development, IT (operations), and management. Finally, change is scary. Your current release process bears no similarity to the well-oiled machines you've seen in a dozen PowerPoint presentations, but it's yours, you know its quirks, and you are shipping. This book is here to help you with some of these challenges. It explains how to progressively evolve the process you use to release software. There are many ways to improve the release process. We

largely focus on how to improve its implementation, the release pipeline, by using and customizing the default build templates provided by Team Foundation Server (TFS) and Lab Management. We move forward in small iterations so that no single change you make is too drastic or disruptive. The goal of this book is to put you on the road toward continuous delivery. By continuous delivery, we mean that through techniques such as versioning, continuous integration, automation, and environment management, you will be able to decrease the time between when you first have an idea and when that idea is realized as software that's in production. We also hope to show that there are practical business reasons that justify every improvement you want to make. A better release process makes economic sense.
