Potential of Mobile Applications in CRM Tobias Herscher, 2015-08-17 Bachelor Thesis from the year 2013 in the subject Business economics - Offline Marketing and Online Marketing, grade: 2,3, International Business School Nürnberg, course: International Business & Management - Potential of Mobile Applications in CRM, language: English, abstract: A practice-oriented approach to the implementation of mobile devices and mobile CRM strategies into the current service-infrastructure of companies dealing with high complexity in CRM. Mobile is everywhere and it's constantly growing. News are preferably read on the phone, shopping is done via iPad and the travel business has become a highly dynamic patchwork of mobile and online services. The customer has a choice - make it easy to be chosen! [...] Data is ubiquitous and cheap, analytical ability is scarce... The sexiest job in the next ten years will be statistician." (Quote: Google's Chief Economist, Hal Varian) [...] it is essential for companies to act, not to react, predicting, not observing market developments, in order to ensure future success. A company needs to manage customer relations instead of products.

Mobile Marketing Matt Haig, 2002 Mobile marketing [using SMS - the short messaging service to send text messages via mobile phones] is emerging as a direct and powerful way to communicate with customers. This is the first book devoted exclusively to exploring the potential of this new medium.

Increasing Customer Loyalty via Mobile Customer Relationship Management Silke Freitag, 2002-08-01 Inhaltsangabe: Abstract: The main objective of this research was to find out and demonstrate how companies can manage to maintain and increase their

customer's loyalty with the help of Customer Relationship Management in today's wireless world. Due to the growing convergence of the Internet and the mobile phone, competition between companies is considerably increasing. In order to further keep their stake in the market, companies are forced to improve the relations to their customers by using new business technologies enabling them to differentiate themselves from the competition in offering personalized services especially tailored to their customers' needs. This thesis will concentrate on the opportunities that Customer Relationship Management offers in the wireless world. Mobile applications and instruments that enable companies to create more loyalty among their customers will be pointed out while special focus is laid on SMS-Marketing. A few examples of companies who have been successfully applying wireless marketing will be given. Furthermore, part of this thesis was to carry out an online survey during which a number of people were interviewed about their experience with mobile services and their willingness to accept wireless marketing. The survey results provided a basis upon which the acceptance of possible marketing strategies, designed to increase customer loyalty, could be judged.

Electronic Commerce 2018 Efraim Turban, Jon Outland, David King, Jae Kyu Lee, Ting-Peng Liang, Deborrah C. Turban, 2017-10-12 This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook , LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.
