Mobile Location Services Andrew Jagoe, 2003 -- Includes case studies based on real world solution deployments with Vicinity, ATX, Ford and Hutchison 3G.-- Insights into differences between solutions for US and European marketplaces.-- Includes a software development kit for building a basic Location Service Solution. Mobile applications must be much smarter than desktop web applications. These applications need to know user's location, surroundings, and provide directions on how to get there. Developers face many challenges, including how to pinpoint the user's location, how to retrieve relevant spatial data from map databases that are often 20 Gigabytes in size, and how to support multiple clients. The mobility provided by the proliferation of wireless devices, such as Palm Pilots and onboard navigation systems presents a new class of opportunities and problems for application developers. This book provides an end-to-end solution guide to understand the issues in location-based services and build solutions that will sell. Complete with software and industry case studies, this book is an essential companion to anyone wanting to build the next killer application. The more than one million auto-based telematics terminals that have been installed by year-end 2001 are ample testimony of the opportunities and attractiveness of the mobile location services market. This large and growing installed base of subscribers also provides multiple implementation examples, which are incorporated into the text

CRIME AND PUNISHMENT , 2020-06-05 Story on a very

relevant topic on which debates after debates are on as whether death sentence is a deterrent to crimes such as Rape and Murder Dilip Kulkarni, a medical student doing his m.s. (Surgery) and Anita Ghanekar, a student of Arts become friends by chance and their common interest in music. Their families become friends too. With the consent of their parents Dilip and Anita start dating each other to get to know more about each other with a marriage in view. During one of their outings while they were returning on Dilip's bike they are witness to an incident which they brush aside as quarrel between people living in shanties. However the incident turns out to be a Rape and Murder case as reported in the media the next day. During the incident Anita had seen the Rapist's face clearly in the head light of the bike. She had sketched it on returning home more as a test of her skill. The couple feeling extremely guilty about not being able to save the victim having been witness to the incident, and at the same time not being able to go to the police for possible repercussion, decide to post the sketch copy to the police who think they have some lead but are skeptical at the same time if it could be a red herring The rapist is accidentally discovered during a planned visit to the victim's parents by Dilip and Anita. Dilip and Anita both feel that passing the information to the police again may have repercussions, and even if caught and punished with death sentence it would be more a reward than punishment as the criminal would RIP. Dilip therefore decides to do an orchiectomy on the criminal and render him incapable of such heinous act.. The story is all about how the police discovers the criminal and the surgeon, and a surprise end to the story .

Location-Based Services in Cellular Networks: from GSM to 5G NR Adrián Cardalda García, Stefan Maier, Abhay Phillips, 2020-07-31 This exciting new book delivers a comprehensive overview of the cellular network architecture, with focus on the positioning applications and emergency call services, and covers aspects brought by 5G, including the core virtualization and the network slicing to optimize cellular network deployments. Focus is given to the different positioning technologies used in cellular networks, divided in satellite positioning, terrestrial radio positioning, non-RF positioning and a brief introduction to sensor fusion and Bayesian theory. It provides an overview of all the positioning technologies used in

cellular networks, from GSM to 5G, from RAT independent technologies, such as A-GNSS (including GNSS evolution, RTK and PPP), WiFi, Bluetooth and sensor fusion, to cellular network native technologies, such as OTDOA / DL-TDOA, ECID, multi-cell RTT and the Angle Of Arrival (AOA) based techniques that take advantage of 5G mmWave beamforming features. Different positioning protocols, especially the LTE Positioning Protocol (LPP), which is used for LTE and 5G NR and defines the communication between the user device (mobile phone, connected vehicle, etc.) and the base station are explained extensively, and compares it with other competing protocols such as OMA LPPE. Furthermore, it also explains the core network positioning protocols (LPPa, NRPPa), that describe the communication between the location server and the core network. Explanation of different signaling parameters will enable the reader to understand better how positioning works in a cellular network. The contents of this book are aimed at all types of users, from beginners to the concept of positioning to experts that are looking to enhance their knowledge of positioning in cellular networks.

Communication Technologies for Vehicles Alexey

Vinel, Rashid Mehmood, Marion Berbineau, Cristina Rico Garcia, Chung-Ming Huang, Naveen Chilamkurti, 2012-04-23 This book constitutes the joint refereed proceedings of the 4th International Workshop on Communication Technologies for Vehicles/Trains, Nets4Cars 2012 and Nets4Trains 2012, held in Vilnius, Lithuania, in April 2012. The 4 full papers of the rail track and 11 full papers of the road track presented were carefully reviewed and selected from numerous submissions. They provide an overview over latest technologies and research in the field of intra- and inter-vehicle communications (protocols and standards), mobility and traffic models (models, methodologies, and techniques), testing, and applications.

Creating Location Services for the Wireless Web Johan

Hjelm,2003-05-27 The first guide to developing user location applications You are walking down a street and suddenly, your cell phone display flashes the news that you are 70 feet from a Starbuck's and that you are entitled to a dollar off your next purchase. You have just witnessed an example of user location services, one of the exciting new generations of cell phone and handheld services. This book describes the architecture and operation of this technology. It also familiarizes readers with the new location services development standard, shows how to programming with GIS, provides GUI design guidelines, and uses real-world examples to teach valuable lessons on how to successfully develop and deploy user location applications for the wireless Web. CD-ROM contains a host of tools for developing positioning and location services.

Securing Electronic Personal Data United States. Congress. Senate. Committee on the Judiciary,2005

The New Politics of Surveillance and Visibility Richard V. Ericson, Kevin D. Haggerty,2006-01-01 Since the terrorist attacks of September 2001, surveillance has been put forward as the essential tool for the 'war on terror,' with new technologies and policies offering police and military operatives enhanced opportunities for monitoring suspect populations. The last few years have also seen the public's consumer tastes become increasingly codified, with 'data mines' of demographic information such as postal codes and purchasing records. Additionally, surveillance has become a form of entertainment, with 'reality' shows becoming the dominant genre on network and cable television. In *The New Politics of Surveillance and Visibility*, editors Kevin D. Haggerty and Richard V. Ericson bring together leading experts to analyse how society is organized through surveillance systems, technologies, and practices. They demonstrate how the new political uses of surveillance make visible that which was previously unknown, blur the boundaries between public and private, rewrite the norms of privacy, create

new forms of inclusion and exclusion, and alter processes of democratic accountability. This collection challenges conventional wisdom and advances new theoretical approaches through a series of studies of surveillance in policing, the military, commercial enterprises, mass media, and health sciences.

Building Multichannel Applications with WebSphere Commerce Rufus Credle, Sribha Jain, Nicolai Nielsen, Leonardo Ramirez, Anand Tamariya, Fu Liang Wang, IBM Redbooks, 2010-02-24 This IBM® Redbooks® publication discusses the value proposition of cross-channel solutions and describes the IBM Retail Integration Framework Commerce Product Strategy solution and service-oriented architecture (SOA) as an enabler. In depth, this book describes cross-channel processes and cross-channel features and proposes scenarios and configurations to meet the challenges in a competitive environment. This book describes the latest features and techniques of IBM WebSphere® Commerce Version 7. In it, we present an overview of the WebSphere Commerce order and inventory management systems, the distributed order management (referred to as DOM throughout this book) integration framework, and a sample DOM integration scenario. We discuss the Madisons starter store (Web 2.0 storefront) and present a hands-on experience that integrates MapQuest with the WebSphere Commerce V7 Store Locator feature. We discuss how a merchant can use the mobile features that are included in WebSphere Commerce V7 to define e-Marketing Spots and promotion for mobile users. In addition, we demonstrate how to use Google Maps with the Store Locator feature on a mobile

device. We include in this book an example about how to apply WebSphere Commerce features on a cross-channel solution as applied at the Easy Hogary Construcccion home improvement retail company in South America. The scenario explains how to scale from an SOA store to a cross-channel business model. This book is designed for use by WebSphere Commerce developers, practitioners, and solution architects in various industries.

Mobile Security Products for Android Philipp

Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013, more than 1 billion smartphones were sold, a further milestone in the advance of these devices¹. A study published by Facebook emphasises the importance of smartphones in our lives; about 80% of users make

use of their smartphone within 15 minutes of waking up each day. At the same time, the traditional function of a telephone is becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos, users trust their devices with their most personal communications, such as Facebook, WhatsApp and email. This brings some risks with it, as such usage makes the smartphone interesting for criminals, who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days, the use of security software on a PC or laptop is seen as essential. However, many smartphone users do not yet have the same sense of responsibility, even though their devices store personal data, private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top-quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to thieves. Consequently, many of today's security products contain not only malware protection, but also highly developed theft-protection functions, which make the device less attractive to thieves (e.g. by locking the device), and help the owner to find it again.
