Can We Avoid Another Financial Crisis? Steve Keen,2017-05-09 The Great Financial Crash had cataclysmic effects on the global economy, and took conventional economists completely by surprise. Many leading commentators declared shortly before the crisis that the magical recipe for eternal stability had been found. Less than a year later, the biggest economic crisis since the Great Depression erupted. In this explosive book, Steve Keen, one of the very few economists who anticipated the crash, shows why the self-declared experts were wrong and how ever-rising levels of private debt make another financial crisis almost inevitable unless politicians tackle the real dynamics causing financial instability. He also identifies the economies that have become 'The Walking Dead of Debt', and those that are next in line – including Australia, Belgium, China, Canada and South Korea. A major intervention by a fearlessly iconoclastic figure, this book is essential reading for anyone who wants to understand the true nature of the global economic system.

*Advanced Calculus* Lynn Harold Loomis,Shlomo Sternberg,2014-02-26 An authorised reissue of the long out of print classic textbook, *Advanced Calculus* by the late Dr

Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.
