*Complexity and Diversity* K. Kudo,O. Yamakawa,Y. Tamagawa,2012-12-06 Nonlinear complex open systems show great diversity in the process of self-organization, and that diversity increases as complexity increases. The measurement of complexity and the origins of the diversity of such complex systems are the focus of interdisciplinary studies extending across a wide range of scientific disciplines that include applied mathematics, physics, chemistry, biology, psychology, ecology, sociology, and economics. Previous investigations have concentrated either on complexity or on diversity, but not both. This volume makes clear the relation between complexity and diversity with examples drawn from various disciplines. Compiles here are presentations from the Complexity and Diversity workshop held in Fugue, Japan, in August 1996. The contributions are the results of research in mathematical systems, physical systems, living systems, and social systems, and are contained in the four corresponding sections of the book. Mathematical expressions for the theory of complexity as a fundamental method along with realistic examples for application of systematic methods provide the reader with ready access to the latest topics in complex systems.

*College Women and Fertility Values* Charles F. Westoff,Raymond H. Potvin,2015-12-08 Has the college experience of women been an influence on the number of children desired and the number and spacing of their children? Do women come to college with their attitudes and values in this regard already formed? This study of 15,000 women, freshmen and seniors in 45 American colleges and universities, both secular and nonsecular, attempts to answer this question and to determine how such characteristics as religious preference, career intentions, and the number of children in her own family influence a woman's fertility values. Attention is paid to an earlier finding that Catholic college graduates have higher fertility than Catholic high school graduates, although higher education is usually associated with lower fertility. *From Gesture to Language in Hearing and Deaf Children* Virginia Volterra,Carol J. Erting,2012-12-06 Virginia Volterra and Carol Erting have made an important contribution to knowledge with this selection of studies on language acquisition. Collections of studies clustered more or less closely around a topic are plentiful, but this one is unique. Volterra and Erting had a clear plan in mind when making their selection. Taken together, the studies make the case that language is inseparable from human interaction and communication and, especially in infancy, as much a matter of gestural as of vocal behavior. The editors have arranged the papers in five coherent sections and written an introduction to each section in addition to the expected general introduction and conclusion. No introductory course in child and language development will be complete without this book. Presenting successively studies of hearing children acquiring speech languages, of deaf children acquiring sign languages, of hearing children of deaf parents, of deaf children of hearing parents, and of hearing children compared with deaf children, Volterra and Erting give one a wider than usual view of language acquisition. It is a view that would have been impossible not many years ago - when the primary languages of deaf adults had received neither recognition nor respect.

A Phonological Grammar of Kenyan Sign Language Hope E. Morgan,2022-07-05 This grammar of Kenyan Sign Language (KSL) phonology adds to a sparse literature on the units of categorical form in the world’s sign languages. At the same time, it brings descriptive and theoretical research on sign language phonology into better alignment by systematically evaluating current models of sign language phonology for each of the main parameters – handshape, location, and movement – against the KSL data. This grammar also makes a methodological contribution by using a unique dataset of KSL minimal pairs in the analysis, demonstrating that minimal pairs are not as infrequent in sign languages as previously thought. The main content of the book is found in five chapters on handshape, location, core articulatory movement, manner of movement, and other distinctive features (e.g., orientation, mouth actions). The book also contains two large appendices that document the phonological evidence for each of the 44 handshapes and 37 locations. This book will be a key reference for descriptive and typological studies of sign phonology, as well as a helpful resource for linguists interested in understanding the similarities and differences between current models of sign phonology and identifying promising avenues for future research.
