Teaching Health Care in Virtual Space Estelle Codier, 2019-01-31 Teaching Health Care in Virtual Space is the first "how-to" manual for health educators on the instructional use of three-dimensional, computer-generated virtual environments that can be inhabited simultaneously by many participants; commonly called "multi-user virtual learning environments" or MUVE. Based on her experience supervising more than 400 learning activities in Second Life®—as of 2014, the largest public (free) MUVE—Dr. Estelle Codier has written a step-by-step handbook for novice and experienced MUVE teachers alike. The book provides those new to virtual teaching with specific steps to assess their own instructional readiness, guidance for assessing student and class readiness, as well as detailed descriptions of problem prevention and solutions. The text is accompanied by lively case studies of both success and failure in virtual learning environments. Inspiring stories of student learning illustrate the power of MUVE to transform health care education. This innovative handbook presents an extended discussion of the pedagogical advantages for learning in multi-user virtual environments, along with a history of learning in Second Life®. The text includes an appendix of supporting materials for MUVE learning activities: evaluation grids, grading matrices, syllabus descriptions, and detailed orientation materials for both faculty and students. While the sample learning activities were designed for nurses, instructors in other disciplines could easily adapt them for use in any MUVE setting.

Facets of Virtual Environments Fritz Lehmann-Grube, Jan Sablatnig, 2010-02-17 In recent years, the popularity of virtual worlds has increased significantly and they have consequently come under closer academic scrutiny. Papers about virtual worlds are typically published at conferences or in journals that specialize in something - tirely different, related to some secondary aspect of the research. Thus a paper d- cussing legal aspects of virtual worlds may be published in a law journal, while a psychologist's analysis of situation awareness may appear at a psychology conference. The downside of this is that if you publish a virtual worlds paper at an unrelated conference in this manner you are likely to be one of only a handful of attendees working in the area. You will not, therefore, achieve the most important goal of - tending conferences: meeting and conversing with like-minded colleagues from the academic community of your field of study. Virtual worlds touch on many well-established themes in other areas of science. Researchers from all these fields will therefore be looking at this new, interesting, and growing field. However, to do effective research related to these complex constructs, researchers need to take into account many of the other facets from other fields that impact virtual worlds. Only by being familiar with and paying attention to all these different aspects can virtual worlds be properly understood.

Virtual Learning Environments Aroutis Foster, Mamta Shah, 2024-06-07 This book provides education scholars insight into current theoretical and methodological approaches to conceptualize, facilitate, and examine learning and identity in virtual learning environments such as games and simulations. Virtual learning environments (VLEs) are being increasingly designed, implemented, and researched because they offer opportunities for learning that are embodied, enactive (i.e., learning by doing), extended into the learners' environment, and embedded in authentic and potentially valuable contexts for identity exploration. Each chapter in this book uniquely illustrates the learning and identity processes, characteristics, and outcomes that VLEs can facilitate. Together, these approaches provide a foundation for use-inspired research that guides how individuals intentionally, continually, and dynamically reinvent the self for a future that requires flexibility and adaptability in both career and academic spaces. The volume will be a key resource for researchers, scholars, and practitioners engaged in the interdisciplinary fields of learning sciences, learning analytics, and learning design. It was originally published as a special issue of The Journal of Experimental Education.

Towards Sustainable and Scalable Educational Innovations Informed by the Learning Sciences Chee-Kit Looi, David H. Jonassen, Mitsuru Ikeda, 2005 One of the basic principles that underpin the learning sciences is to improve theories of learning through the design of powerful learning environments that can foster meaningful learning. Learning sciences researchers prefer to research learning in authentic contexts. They collect both qualitative and quantitative data from multiple perspectives and follow developmental micro-genetic or historical approaches to data observation. Learning sciences researchers conduct research with the intention of deriving design principles through which change and innovation can be enacted. Their goal is to conduct research that can sustain transformations in schools. We need to be cognizant of research that can inform and lead to sustainable and scalable models of innovation. In order to do so, we need to take an interdisciplinary view of learning, such as that embraced by the learning sciences. This publication focuses on learning sciences in the Asia-Pacific context. There are researchers

and young academics within the Asia-Pacific Society for Computers in Education (APSCE) community who are concerned with issues of conducting research that can be translated into practice. Changes in practice are especially important to Asian countries because their educational systems are more centralized. That is why there is a need to reform pedagogy in a more constructivist and social direction in a scalable way.

Cognitive Technology: Instruments of Mind Meurig Beynon, Chrystopher L. Nehaniv, Kerstin Dautenhahn, 2003-05-15 Cognitive Technology: Instruments of Mind Cognitive Technology is the study of the impact of technology on human cognition, the externalization of technology from the human mind, and the pragmatics of tools. It

promotes the view that human beings should develop methods to predict, analyse, and optimize aspects of human-tool relationship in a manner that respects human wholeness. In particular the development of new tools such as virtual environments, new computer devices, and software tools has been too little concerned with the impacts these technologies will have on human cognitive and social capacities. Our tools change what we are and how we relate to the world around us. They need to be developed in a manner that both extends human capabilities while ensuring an appropriate cognitive fit between organism and instrument. The principal theme of the CT 2001 conference and volume is declared in its title: Instruments of Mind. Cognitive Technology is concerned with the interaction between two worlds: that of the mind and that of the machine. In science and engineering, this interaction is often explored by posing the question: how can technology be best tailored to human cognition? But as the history of technological developments has consistently shown, cognition is also fashioned by technology. Technologies as diverse as writing, electricity generation, and the silicon chip all illustrate the profound and dynamic impact of technology upon ourselves and our conceptions of the world.
