Excerpt: The cast of the television series MythBusters perform experiments to verify or debunk urban legends, old wives' tales, and the like. This is a list of the various myths tested on the show as well as the results of the experiments (the myth is Busted, Plausible, or Confirmed).

According to the American Automobile Association, an estimated 11,000 vehicles crashed into bodies of water in one year. The MythBusters tested various methods of escaping a sinking car, in this case a Ford Taurus. Having confirmed the myth, Adam and Jamie expanded on the myth to determine in what situations and which methods of escaping the car are feasible. A person can escape a car that has fallen into the water... They also proved that breaking the window is a viable way to escape a sinking car, if one has a suitable tool. Though breaking the window quickly floods the interior, Adam only has to hold his breath for a few seconds before climbing through the simulated broken window and surfacing. A person can open a window in a submerged car by... The MythBusters tested whether a speed camera... The unofficial (Jamie Hyneman) test... Nitroglycerin is useful in treating heart and blood conditions, but is also an unstable explosive. The MythBusters test the efficacy of labels warning not to use a defibrillator before removing any nitroglycerin patches. Following the old saying, Jamie and Adam see if they can teach an old dog new tricks. The Build Team tries to distract and get around a guard dog (in this case, a German Shepherd named Eewan) by... Afterwards, the build team tried to invent ways to get past Eewan. Overall, while a few methods managed to work, the guard dogs can be specifically trained to ignore certain distractions. Thus, overall, this myth was considered only plausible. The MythBusters see what it takes to shake a scent hound. A Bloodhound can be deterred by... This is the sixth episode in which earlier myths are retested. The MythBusters test various Ninja-related myths. This

MythBusters Keith Zimmerman, Kent Zimmerman, 2005-10-25 Provides evidence either verifying or disproving thirty urban legends, such as exploding silicon implants, cooking a chicken in a tanning bed,

Every Tool's a Hammer Adam Savage,2020-10-27 In this New York Times bestselling “imperative how-to for creativity” (Nick Offerman), Adam Savage—star of Discovery Channel’s Mythbusters—shares his golden rules of creativity, from finding inspiration to following through and successfully making your idea a reality. Every Tool’s a Hammer is a chronicle of my life as a maker. It’s an exploration of

making, but it's also a permission slip of sorts from me to you. Permission to grab hold of the things you're interested in, that fascinate you, and to dive deeper into them to see where they lead you. Through stories from forty-plus years of making and molding, building and breaking, along with the lessons I learned along the way, this book is meant to be a toolbox of problem solving, complete with a shop's worth of notes on the tools, techniques, and materials that I use most often. Things like: In Every Tool There Is a Hammer—don't wait until everything is perfect to begin a project, and if you don't have the exact right tool for a task, just use whatever's handy; Increase Your Loose Tolerance—making is messy and filled with screwups, but that's okay, as creativity is a path with twists and turns and not a straight line to be found; Use More Cooling Fluid—it prolongs the life of blades and bits, and it prevents tool failure, but beyond that it's a reminder to slow down and reduce the friction in your work and relationships; Screw Before You Glue—mechanical fasteners allow you to change and modify a project while glue is forever but sometimes you just need the right glue, so I dig into which ones will do the job with the least harm and best effects. This toolbox also includes lessons from many other incredible makers and creators, including: Jamie Hyneman, Nick Offerman, Pixar director Andrew Stanton, Oscar-winner Guillermo del Toro, artist Tom Sachs, and chef Traci Des Jardins. And if everything goes well, we will hopefully save you a few mistakes (and maybe fingers) as well as help you turn your curiosities into creations. I hope this book serves as “creative rocket fuel” (Ed Helms) to build, make, invent, explore, and—most of all—enjoy the thrills of being a creator.

The Skeptics' Guide to the Universe Dr. Steven Novella, 2018-10-02 An all-encompassing guide to skeptical thinking from podcast host and academic neurologist at Yale University School of Medicine Steven Novella and his SGU co-hosts, which Richard Wiseman calls the perfect primer for anyone who wants to separate fact from fiction. It is intimidating to realize that we live in a world overflowing with misinformation, bias, myths, deception, and flawed knowledge. There really are no ultimate authority figures-no one has the secret, and there is no place to look up the definitive answers to our questions (not even Google). Luckily, *The Skeptic's Guide to the Universe* is your map through this maze of modern life. Here Dr. Steven Novella-along with Bob Novella, Cara Santa Maria, Jay Novella, and Evan Bernstein-will explain the tenets of skeptical thinking and debunk some of the biggest scientific myths, fallacies, and conspiracy theories-from anti-vaccines to homeopathy, UFO sightings to N- rays. You'll learn the difference between science and pseudoscience, essential critical thinking skills, ways to discuss conspiracy theories with that crazy co- worker of yours, and how to combat sloppy reasoning, bad arguments, and superstitious thinking. So are you ready to join them on an epic scientific quest, one that has taken us from huddling in dark caves to setting foot on the moon? (Yes, we really did that.) DON'T PANIC! With *The Skeptic's Guide to the Universe*, we can do this together. Thorough, informative, and enlightening, *The Skeptic's Guide to the Universe* inoculates you against the frailties and shortcomings of human cognition. If this book does not become required reading for us all, we may well see modern civilization unravel before our eyes. -- Neil deGrasse Tyson In this age of real and fake information, your ability to reason, to think in scientifically skeptical fashion, is the most important skill you can have. Read *The Skeptics' Guide Universe*; get better at reasoning. And if this claim about the importance of reason is wrong, *The Skeptics' Guide* will help you figure that out, too. -- Bill Nye

The Myth of Digital Democracy Matthew Hindman, 2009 Matthew Hindman reveals here that, contrary to popular belief, the Internet has done little to broaden political discourse in the United

States, but rather that it empowers a small set of elites - some new, but most familiar.

Truth and Rumors Bill Brioux, 2007-12-30 When you first heard it, you couldn't believe it: Jerry Mathers, from TV's *Leave It To Beaver*, had been killed in Vietnam. Then word came that Abe Vigoda, the actor who played the curmudgeonly cop Fish on *Barney Miller*, was dead; and that Mikey, who would eat anything as the Life Cereal tyke, had eaten too many Pop Rocks and exploded. Besides exposing us to things we couldn't otherwise believe, television can convince us of things that never actually happened. But how did these outrageous TV legends get started? How did they spread from classrooms to boardrooms across North America and beyond? And, most important, what do these rumors, so quickly transformed into facts and common knowledge, reveal about our relationship to reality through the medium of television? Put in other words, what exactly is it that we're doing when we're dealing in these fabulous rumors—are we chasing after surprising truths or simply more incredible entertainment? To take one telling example: Jerry Mathers was not actually killed in Vietnam—but the basic sense of this lie wasn't far removed from the emotions factually expressed in the two-page spread of the faces of the dead in *Time* magazine. In the course of this compelling work—which is supplemented with interviews with many of the people implicated in these rumors—author Bill Brioux exposes the reality behind the many stories that currently circulate in our culture. Through these stories (both true and false), he sheds a revealing light on just what role these rumors play in contemporary society—and what role our society plays in regard to these rumors as well.

Bullspotting Loren Collins,2012-10-30 This entertaining and educational book applies the tools of critical thinking to identify the common features and trends among misinformation campaigns. With illustrations drawn from conspiracy theorists and deniers of every stripe, the author teaches readers how rumors are started, and the rhetorical techniques and logical fallacies often found in misleading or outright false claims. What distinguishes real conspiracies from conspiracy theories, real science from pseudoscience, and actual history from bogus accounts purporting to be history? How does one evaluate the credibility of rumors and quotes or judge the soundness of legal arguments advanced by tax deniers? Readers will learn how to make these critical distinctions and also how to spot evidence that has been manufactured or manipulated in some way to create a false impression. At a time when average citizens are bombarded with false information every day, this entertaining book will prove to be not only a great read but also an indispensable resource.

American Science Fiction Television Series of the 1950s Patrick Lucanio,Gary Coville,1998 As Americans grappled with the real problems of the atomic age in the 1950s, the science fiction television series provided escapist fare. At first essentially fantasy and adventure, the shows reflected the progress of the decade, using in the late 1950s extrapolations from the theories and findings of true science. From Adventures of Superman to World of Giants, this reference work covers all science fiction television series of the 1950s. A lengthy essay details character development, technical innovations, critical commentary and other matters. The episode guides that follow first provide primary cast and production credits for the entire season and then coverage of each individual episode, with title, airdate, writer, director, and a plot synopsis. Much of the information was derived from actual viewing, and many errors from other works are corrected here.
