**Scientific American Inventions from Outer Space** David Baker,2000 Scientific American Inventions from Outer Space presents over 60 inventions developed by NASA for use in space - and the ways they are used every day on Earth. There's a little bit of outer space everywhere on Earth, from the paint on the Golden Gate Bridge (originally developed by NASA to withstand high temperatures on the space shuttle launch pad) to today's high-tech sneakers (which use technology first developed for space suits) and keyboards used by disabled workers. These items, plus Dustbuster vacuums, CAT scans, and home water filters, are only some of the world's most familiar consumer products that trace their origins to NASA's space program. This fascinating book describes over 60 inventions and, in color photographs and diagrams, outlines how the space technology was developed and how it is used here on Earth. Full-color illustrations and clear writing offers complete explanations of how inventions are used in everyday objects. Strong Scientific American imprimatur assures quality and appeals to science buffs of all levels.

**It Came from Outer Space** Marjolijn Bijlefeld,Robert L. Burke,2003-08-30 What do anthrax protection, golf clubs, and cordless power tools have in common? Each was invented or improved with technology first developed for the space program. Since NASA's inception 45 years ago, hundreds of everyday devices and products have emerged from the research and development required to put rockets into space and humans on the moon. To expand our knowledge of the universe, scientists and engineers with the space program constantly confront new challenges in vehicle design, life support, communications, and astronaut health and well-being. The solutions to these challenges have often benefited those of us who remain on Earth. This book tells the story of 67 of the most consumer-friendly products born of space-related research. Discover the fascinating histories of commonplace items that we now take for granted. One model of ergonomic chairs was based on the position of astronauts at rest in Skylab. Improvements in health-rate monitors resulted from the need to track changes in an astronaut's heart rate. Even swimsuits and ballpoints pens have been improved by space technology. This book also includes extensive information on the history of NASA, and on the technology-transfer centers that help make such product improvements happen. Lesson plans and resources offer additional sources of information on this remarkable subject.

Sitting Kills, Moving Heals Joan Vernikos,2011-11-03 This groundbreaking new medical work demonstrates how modern sedentary lifestyles contribute to poor health, obesity, and diabetes, and how health can be dramatically improved by continuous, low-intensity, movement that challenges the force of gravity. Citing her original NASA research on how weightlessness weakens astronauts' muscles, bones, and overall health, the author presents a simple and effective plan for maintaining good health throughout life by developing new lifestyle habits of frequent gravity-challenging movement. Written for everyone who spends most of their lives sitting in chairs, at desks, and in cars, this practical, easy-to-follow action plan outlines simple gravity-challenging activities such as standing up frequently, stretching, walking, and dancing that are more healthful and effective than conventional diet and exercise regimens.

**The Birth of NASA** National Aeronautics and Space Administration,J. D. Hunley,Roger D. Launius,2014-02-05 The Birth of NASA—The Diary of T. Keith Glennan tells the story of the critical formative months of the new agency. The Introduction describes the background of T. Keith Glennan, the first NASA Administrator. After the Introduction, the book continues with Glennan's recollections of NASA from his appointment until the end of 1959. The 13 chapters are written in a diary format covering month-by-months his activities until he left the position in 1961. A Postscript, written in 1963, gives his views on the space program after he left office. A Biographical Appendix gives short sketches of about 400 individuals active in the space program during this period. Throughout the diary numerous explanatory footnotes by the editor clarify events and provide references for further details. Although Glennan's stay at NASA was short, his contributions are most significant, as he built the organization that would men to the moon and serve the nation to the present time. By T. Keith Glennan: “When I first began keeping this journal or diary, I never thought that it might, one day, be published. When I was appointed as the first Administrator of the newly authorized National Aeronautics and Space Administration on 19 August 1958, I started to keep a hand-written diary of sorts but soon found that my time was all too limited for that task. When I went back to Cleveland for the year-end holidays in 1959, I found that my four children had become much interested in knowing more about my job. They were also developing an

interest in national and international affairs that intrigued me. I resolved to record my activities using my daily appointment cards to remind me of the important meetings that had become a daily way of life. I had a small, battery-operated recording machine called a dictette, and I usually dictated a summary of the day's happenings before I turned off the light each night. I sent the tapes back to my office at Case Institute of Technology in Cleveland where my secretary, Barbara Helberg, transcribed and stored them. I never saw them until I returned to Case in early 1961. Nor did I or anyone else edit them until NASA's chief historian, Dr. Roger D. Launius, and Dr. J. D. Hunley of the NASA History Office undertook the task. I did retain all of the daily appointment record cards, however. In 1963 my wife and I decided to take a long holiday in Europe, and I took the dictette and appointment cards with me, intending to record the events of the days between 19 August 1958 and 1 January 1960. I soon found that my memory was a bit hazy; I therefore chose to provide the kids with synopses of relationships with individuals or groups rather than the hour-by-hour recitation mode I had used to record the events after 1 January 1960. Throughout, I had embellished the unfolding story with bits of personal feelings or philosophy when stimulated by significant meetings or events. I do regret that I did not record the full diary when I started in the new post. When I completed the diary proper in 1963, I decided to voice my concern over the crash nature of the Apollo program, although I recognize that my conservative nature certainly clouded my vision at the time. When the Apollo 11 astronauts landed on the moon on 20 July 1969, I was glued to a television screen at the Bohemian Grove north of San Francisco and was as thrilled and emotionally moved as anyone could be. The management of that program by Jim Webb, Hugh Dryden, Tom Paine, Bob Seamans and Bob Gilruth was in the best tradition of the great undertakings that have periodically marked our nation's history."

**Making Time on Mars** Zara Mirmalek, 2020-04-07 An examination of how the daily work of NASA's Mars Exploration Rovers was organized across three sites on two planets using local Mars time. In 2004, mission scientists and engineers working with NASA's Mars Exploration Rovers (MER) remotely operated two robots at different sites on Mars for ninety consecutive days. An unusual feature of this successful mission was that it operated on Mars time—the daily work was organized across three sites on two planets according to two Martian time zones. In *Making Time on Mars*, Zara Mirmalek shows that this involved more than a resetting of wristwatches; the team's struggle to synchronize with Mars time involved technological and communication breakdowns, informal workarounds, and extra work to support the technology that was intended to support people. Her account of how NASA created an entirely new temporality for the MER mission offers insights about the assumptions behind the organizational relationship between clock time and work. Mirmalek, herself a member of the mission team, offers an insider's view of the MER workplace and community. She describes the discord among MER's multiple temporalities and examines issues of professional identity that helped shape the experience of working according to Mars time. Considering time and work relationships through a multidisciplinary lens, Mirmalek shows how contemporary and historical human–technology relationships inform assumptions about the unalterability of clock time. She argues that the organizational connection between clock time and work, although still operational, is outdated.

*Extraordinary Golf: the Art of the Possible* Fred Shoemaker, Pete Shoemaker, 1997-04-01 Most golfers approach the tee with a complex mental package: worries and judgments about their swing, the other person's swing, the course, the weather, looking good, looking bad. They think about what's wrong instead of what's possible, and this is what *Extraordinary Golf* teaches: the art of the possible. Drawing on his experience teaching both amateurs and professionals for more than fifteen years, in his clinics around the country, in his *Golf in the Kingdom* seminars at the Esalen Institute, and at his own School for Extraordinary Golf in California, Shoemaker shows how extraordinary golf can be coached, learned, and practiced, with results not only in people's scores but in their sheer pleasure in the game. Combining a host of practical exercises with an entirely new point of view, he demonstrates how to focus not on the voices in your head but on the reality of golf: the club, the ball, your body, the course - the elements that actually make up your game. He shows how to approach shots creatively, instead of mechanically; how to read greens simply by staying awake; how to develop a powerful and consistent swing by rediscovering trust for your instincts; and how to improve yourself in competition by determining what you're competing for. He also gives simple guidelines on how to coach yourself, your spouse, and your children successfully.
