Angry Weather Friederike Otto, 2020-09-12 From leading climate scientist Dr. Friederike Otto, this gripping book reveals the revolutionary science that definitively links extreme weather events—including deadly heat waves, forest fires, floods, and hurricanes—to climate change. “Meet the forensic scientists of climate change; if you like CSI, you’ll be equally enthralled with the skill and speed these folks exhibit. But the stakes are infinitely higher!” –Bill McKibben, author of *Falter* and *The End of Nature* Tied with Hurricane Katrina as the costliest cyclone on record, Hurricane Harvey caused catastrophic flooding and over a hundred deaths in 2017. *Angry Weather* tells the compelling, day-by-day story of the World Weather Attribution unit—a team of scientists that studies extreme weather events while they’re happening—and their race to track the connection between the hurricane and climate change. As the hurricane unfolds, Otto reveals how attribution science works in real time, and determines that Harvey’s terrifying floods were three times more likely to occur due to human-induced climate change. At the forefront of

cutting-edge climate science, Friederike Otto uncovers how the new ability to determine climate change's role in extreme weather events can dramatically transform how we view the climate crisis: from how it will affect those of us who are most vulnerable, to the corporations and governments that may find themselves held accountable in the courts. The research laid out in *Angry Weather* will have profound impacts, both today and for the future of humankind. Published in Partnership with the David Suzuki Institute.

The Time of New Weather Sean Murphy, 2004-12-28
THE TIME OF NEW WEATHER IS AT HAND—AND IT'S NOT A PRETTY SIGHT. In this exhilarating adventure of absurdist wit, rollicking revolution and romance, the future isn't what it used to be and the past won't leave us alone. Bringing to mind 1984 and Brave New World—but with his own twist of gleeful humor—award-winning author Sean Murphy presents a vision of an America gone off the rails: an America where it literally rains cats and dogs, where a hubcap ranch is now a National Preservation Site, where a horde of circus folk and Elvis fans are on the rampage—and where some rather suspicious things are going on with time and gravity. Into this world is born Buddy Le Blanc, a young boy with a special gift: the ability to perform tiny miracles. Nothing big, like raising the dead or curing the sick—more like an uncanny knack for finding spare change. He longs to find a way to make a difference; but in a world where time and gravity storms can spring up

at a moment's notice (sending your belongings hurtling through the roof, or off to the Renaissance) and big business has gobbled up the U.S. government (now renamed The America Corporation), it's hard to get your foot in the door. But when Buddy joins up with a cast of fellow seekers—renegade circus freaks, ragtag revolutionaries, a woman in search of her hat, and a particularly gorgeous journalist—in the hope of waking America up from its dream, the fate of the country may just end up in his not-so-capable hands....

Stormy Weather D. Scala, 2003-12-04 In the coming presidential primaries, no state is as important in setting the stage - or affecting the odds - as New Hampshire. This small, mountainous, proudly distinctive state holds the first primary and the results, both real and in comparison to expectations, can greatly influence the competition for the highest office in the land. Candidates who do well can create momentum and gain support, while those who do worse than expected can be counted out. Scala explains the distinctiveness of New Hampshire politics and how the candidates create strategies to appeal to the state's voters. New Hampshire's sympathy for reformist candidates has the paradoxical affect of jumpstarting the campaigns of those candidates least representative of Democratic voters nationally. The implications for Democratic chances to win the presidency in 2004 are discussed.

Weather Jenny Offill, 2021-01-19 NEW YORK TIMES BESTSELLER • From the beloved author of the nationwide best seller *Dept. of Speculation* comes a “darkly funny and urgent” (NPR) tour de force about a family, and a nation, in crisis. Lizzie works in the library of a university where she was once a promising graduate student. Her side hustle is answering the letters that come in to *Hell and High Water*, the doom-laden podcast hosted by her former mentor. At first it suits her, this chance to practice her other calling as an unofficial shrink—she has always played this role to her divorced mother and brother recovering from addiction—but soon Lizzie finds herself struggling to strike the obligatory note of hope in her responses. The reassuring rhythms of her life as a wife and mother begin to falter as her obsession with disaster psychology and people preparing for the end of the world grows. A marvelous feat of compression, a mix of great feeling and wry humor, *Weather* is an electrifying encounter with one of the most gifted writers at work today.

The Weather Robert J. Ford, 2021-04 With 150 striking images and fascinating captions explaining each phenomenon, *The Weather* celebrates the Earth's weather in all its glory. Did you know that, on average, a drop of water spends an average of eight days in the atmosphere before falling back down to Earth in the form of rain, sleet, hail, or snow? Or that rain isn't just water? It can have all sorts of things in it, such as dirt, dust, insects, grass--even chemicals. As for snowflakes, you don't just need an ice crystal to make one, but a speck of dust too, around which the ice crystal forms. And it can take 45 minutes for a snowflake, growing all the time, to fall to Earth. *The Weather* offers a photographic view of some of the most spectacular aspects of the weather, from close-up shots of raindrops and snowflakes to beds of fog, from lighthouses turned into ice palaces to frozen forests to lightning bolts striking over water. Ranging from rainbows to, yes, they do exist, moonbows, from typhoons as seen from space to skyscrapers emerging out of the fog, from Nordic winters to Antarctica's desert, from twisters in Colorado to ice storms in New England, and from misty Ireland to dust storms in Namibia, the book includes examples from all around the world.

New Weather Paul Muldoon, 2011-08-04 New Weather was Paul Muldoon's first book of poems. When it appeared in 1973, Seamus Heaney described its author as 'unusually gifted, endowed with an individual sense of rhythm, a natural and copious vocabulary, a technical accomplishment and an intellectual boldness that mark him as the most promising poet to appear in Ireland for years.' While the promise has been amply fulfilled, New Weather gives the poet's many, more recent admirers the opportunity to see what a versatile and substantial artist he was from the outset.
