## **Rethinking the New Technology of Journalism**

Seong Jae Min, 2022-03-08 News organizations have always sought to deliver information faster and to larger audiences. But when clicks drive journalism, the result is often simplistic, sensational, and error-ridden reporting. In this book, Seong Jae Min argues in favor of "slow journalism," a growing movement that aims to produce more considered, deliberate reporting that better serves the interests of democracy. Min explores the role of technology in journalism from the printing press to artificial intelligence, documenting the hype and hope associated with each new breakthrough as well as the sometimes disappointing—and even damaging—unintended consequences. His analysis cuts through the discussion of clickbait headlines and social-media clout chasing to identify technological bells and whistles as the core problem with journalism today. At its heart, Min maintains, traditional shoe-leather reporting—knocking on doors, talking to people, careful observation and analysis—is still the best way for journalism to serve its civic purpose. Thoughtful and engaging, *Rethinking the New Technology of Journalism* is a compelling call for news gathering to return to its roots. Reporters, those studying and teaching journalism, and avid consumers of the media will be interested in this book.

**Computers in Broadcast and Cable Newsrooms**

Phillip O. Keirstead, 2004-09-22 *Computers in Broadcast and Cable Newsrooms: Using Technology in Television News Production* takes readers through the use of computers and software in the broadcast/cable newsroom environment. Author Phillip O. Keirstead began writing about television news technology decades ago in an effort to help television news managers cope with technological change. In this text, he demonstrates the myriad ways in which today's journalism is tied to technology, and he shows how television news journalists rely on varied and complex technologies to produce timely, interesting, and informative broadcasts. Using a hands-on, practical approach to cover the role computers play in various parts of the newsroom, the volume will be of great practical value to undergraduate and graduate students in advanced broadcast/news television courses.

*ENG, Television News and the New Technology*

Richard D. Yoakam, Charles F. Cremer, 1989 Both a text and a professional reference, *ENG* (electronic news gathering) illustrates and discusses the new technology and concepts that have revolutionized television news. Combining an academic with a professional approach, this book deals extensively with the uses of electronic news gathering and electronic field production (EFP). It also

features the latest in satellite news gathering (SNG) and the distribution of that material. This book, which carries the endorsement of the Radio-Television News Directors Association (RTNDA), combines a comprehensive discussion of concepts with instruction in using the technology. It also deals with legal, ethical, operational, and organizational problems that technology has brought to the business of news gathering. Essentially, the authors show how to apply the latest news gathering and microwave technology to researching, writing, reporting, photographing, editing, packaging, producing, and airing television news stories, news packages, newscasts, live reports, and special events. Essays by established professionals supplement the text. These contributors include Tom Wolzien, NBC News, Larry Hatteberg, two-time NPPA News Cameraman of the Year, Lynn Cullen, WTAE-TV, Pittsburgh, and John Premack, WCVB-TV, Boston. The authors have taken a potentially intimidating and complex subject and made it understandable to students and acceptable to practicing professionals. The book is a unique blend of academic and professional material with step-by-step instructions as well as case studies from actual news reporting events.

**Race After Technology** Ruha Benjamin, 2019-07-09  
From everyday apps to complex algorithms, Ruha Benjamin cuts through tech-industry hype to understand how emerging technologies can reinforce White supremacy and deepen social inequality. Benjamin argues that automation, far from being a sinister story of racist programmers scheming on the dark web, has the potential to hide, speed up,

and deepen discrimination while appearing neutral and even benevolent when compared to the racism of a previous era. Presenting the concept of the “New Jim Code,” she shows how a range of discriminatory designs encode inequity by explicitly amplifying racial hierarchies; by ignoring but thereby replicating social divisions; or by aiming to fix racial bias but ultimately doing quite the opposite. Moreover, she makes a compelling case for race itself as a kind of technology, designed to stratify and sanctify social injustice in the architecture of everyday life. This illuminating guide provides conceptual tools for decoding tech promises with sociologically informed skepticism. In doing so, it challenges us to question not only the technologies we are sold but also the ones we ourselves manufacture. Visit the book's free Discussion Guide [here](#).

**The Fourth Industrial Revolution** Klaus Schwab, 2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an

opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than

cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

*Innovators in Digital News* Lucy Küng, 2019 News organisations are struggling with technology transitions and fearful for their future. Yet some organisations are succeeding. Why are organisations such as Vice and BuzzFeed investing in journalism and why are pedigree journalists joining them? Why are news organisations making journalists redundant but recruiting technologists? Why does everyone seem to be embracing native advertising? Why are some news organisations more innovative than others? Drawing on extensive first-hand research this book explains how different international media organisations approach digital news and pinpoints the common organisational factors that help build their success.

**Tools and Weapons** Brad Smith, Carol Ann Browne, 2019-09-10 The instant New York Times bestseller. From Microsoft's president and one of the tech industry's broadest thinkers, a frank and thoughtful reckoning with how to balance enormous promise and existential risk as the digitization of everything accelerates. "A colorful and insightful insiders' view of how technology is both empowering and threatening us. From privacy to cyberattacks, this timely book is a useful guide for how to navigate the digital future." –Walter Isaacson Microsoft President Brad Smith operates by a simple core belief: When your technology changes the world, you bear a responsibility to help address the world you have

helped create. This might seem uncontroversial, but it flies in the face of a tech sector long obsessed with rapid growth and sometimes on disruption as an end in itself. While sweeping digital transformation holds great promise, we have reached an inflection point. The world has turned information technology into both a powerful tool and a formidable weapon, and new approaches are needed to manage an era defined by even more powerful inventions like artificial intelligence. Companies that create technology must accept greater responsibility for the future, and governments will need to regulate technology by moving faster and catching up with the pace of innovation. In *Tools and Weapons*, Brad Smith and Carol Ann Browne bring us a captivating narrative from the cockpit of one of the world's largest and most powerful tech companies as it finds itself in the middle of some of the thorniest emerging issues of our time. These are challenges that come with no preexisting playbook, including privacy, cybercrime and cyberwar, social media, the moral conundrums of artificial intelligence, big tech's relationship to inequality, and the challenges for democracy, far and near. While in no way a self-glorifying Microsoft memoir, the book pulls back the curtain remarkably wide onto some of the company's most crucial recent decision points as it strives to protect the hopes technology offers against the very real threats it also presents. There are huge ramifications for communities and countries, and Brad Smith provides a thoughtful and urgent contribution to that effort.

Little Rice Clay Shirky,2015 Almost unknown to the rest of the globe, Xiaomi has become the world's third-largest mobile phone manufacturer. Its high-end phones are tailored to Chinese and emerging markets, where it outsells even Samsung. Since the 1990s China has been climbing up the ladder of quality, from doing knockoffs to designing its own high-end goods. Xiaomi its name literally means little rice is landing squarely in this shift in China's economy. But the remarkable rise of Xiaomi from startup to colossus is more than a business story, because mobile phones are special. The common desiderata of the global population, mobile phones offer the kind of freedom and connectedness that autocratic countries are terrified of. China's fortune and future clearly lie with opening up to the global market, requiring it to allow local entrepreneurs to experiment. Clay Shirky, one of the most influential and original thinkers on how technological innovation affects social change around the world, now turns his attention to the most populous country of them all. The case of Xiaomi exemplifies the balancing act that China has to perfect to navigate between cheap copies and innovation, between the demands of local and global markets, and between freedom and control.

*News Corporation, Technology and the Workplace* Timothy Marjoribanks,2000-02-10 This book, which

includes extensive interview material and primary research, examines technological innovation and workplace restructuring carried out by News Corporation in its newspaper holdings in Britain, the United States and Australia. Timothy Marjoribanks finds that while some outcomes at various local sites were similar, many were dramatically different. His study reveals that the nature of existing social relations in a particular location has a major impact on workplace reforms. The book finds that the prevailing balance of power between trade unions and workers, management and employers, and the role of the state in these relationships are the most influential factors in determining the course of events. Significantly, it emphasises the importance of analysing the connections between events occurring locally, nationally and globally if we are to understand the growing influence of corporate actors such as News Corporation.

*The Hype Machine* Sinan Aral, 2020-09-15 A landmark insider's tour of how social media affects our decision-making and shapes our world in ways both useful and dangerous, with critical insights into the social media trends of the 2020

election and beyond “The book might be described as prophetic. . . . At least two of Aral’s three predictions have come to fruition.”—New York NAMED ONE OF THE BEST BOOKS OF THE YEAR BY WIRED • LONGLISTED FOR THE PORCHLIGHT BUSINESS BOOK AWARD

Social media connected the world—and gave rise to fake news and increasing polarization. It is paramount, MIT professor Sinan Aral says, that we recognize the outsize effect social media has on us—on our politics, our economy, and even our personal health—in order to steer today’s social technology toward its great promise while avoiding the ways it can pull us apart. Drawing on decades of his own research and business experience, Aral goes under the hood of the most powerful social networks to tackle the critical question of just how much social media actually shapes our choices, for better or worse. He shows how the tech behind social media offers the same set of behavior influencing levers to everyone who hopes to change the way we think and act—from Russian hackers to brand marketers—which is why its consequences affect everything from elections to business, dating to health. Along the way, he covers a wide array of topics, including how network effects fuel Twitter’s and Facebook’s massive growth, the neuroscience of how social media affects our brains, the real consequences of fake news, the power of social ratings, and the impact of social media on our kids. In mapping out strategies for being more thoughtful consumers of social media, *The Hype Machine* offers the definitive guide to understanding and harnessing for good the technology that has redefined our world overnight.
