Cultural Meanings of News Daniel A.

Berkowitz, 2010-03-30 What is news? Why does news turn out like it does? What factors influence the creation, production, and dissemination of news? Cultural Meanings of News takes on these deceptively simple questions through an essential collection of seminal and contemporary studies by leaders in the fields of mass communication and media studies. Similar in format and purpose to editor Dan Berkowitz's award-winning Social Meanings of News, this new volume represents a conceptual update, a continuation of the discourse about the nature of news and how it comes to be, moving ideas ahead from the earlier tradition of sociological approaches to the more pervasive cultural perspectives that inform understandings about news. Cultural Meanings of News provides a carefully selected set of readings, organized into thematic areas that each probe a dimension of the literature: from sociological roots to cultural perspectives; news as narrative and cultural text; newswork as cultural ritual; news as cultural myth; news and its interpretive communities; news as a source and reflection of collective memory; toward the future of news research. This text-reader provides students and scholars with first-hand exposure to cultural approaches to the study of news, while

also providing an organizing framework for understanding the commonalities and differences between threads in the research. The goals are to engage readers through guided immersion in the material.

Audience Feedback in the News Media Bill

Reader, 2015-02-11 As long as there has been news media, there has been audience feedback. This book provides the first definitive history of the evolution of audience feedback, from the early newsbooks of the 16th century to the rough-and-tumble online forums of the modern age. In addition to tracing the historical development of audience feedback, the book considers how news media has changed its approach to accommodating audience participation, and explores how audience feedback can serve the needs of both individuals and collectives in democratic society. Reader writes from a position of authority, having worked as a letters to the editor editor and has written numerous research articles and professional essays on the topic over the past 15 years.

The Language of Time: A Reader Inderjeet Mani, James Pustejovsky, Robert Gaizauskas, 2005-05-27 This reader collects and introduces important work in linguistics, computer science, artificial intelligence, and computational linguistics on the use of linguistic devices in natural languages to situate events in time: whether they are past, present, or future; whether they are real or hypothetical; when an event might have occurred, and how long it could have lasted. In focussing on the treatment and retrieval of time-based information it seeks to lay the foundation for temporally-aware natural language computer processing systems, for example those that process documents on the worldwide web to answer questions or produce summaries. The development of such systems requires the application of technical knowledge from many different disciplines. The book is the first to bring these disciplines together, by means of classic and contemporary papers in four areas: tense, aspect, and event structure; temporal reasoning; the temporal structure of natural language discourse; and

temporal annotation. Clear, self-contained editorial introductions to each area provide the necessary technical background for the non-specialist, explaining the underlying connections across disciplines. A wide range of students and professionals in academia and industry will value this book as an introduction and guide to a new and vital technology. The former include researchers, students, and teachers of natural language processing, linguistics, artificial intelligence, computational linguistics, computer science, information retrieval (including the growing speciality of question-answering), library sciences, human-computer interaction, and cognitive science. Those in industry include corporate managers and researchers, software product developers, and engineers in information-intensive companies, such as on-line database and web-service providers.
