A Pledge with Purpose Gregory S. Parks, Matthew W. Hughey, 2024-02-06 Reveals the historical and political significance of “The Divine Nine”—the Black Greek Letter Organizations In 1905, Henry Arthur Callis began his studies at Cornell University. Despite their academic pedigrees, Callis and his fellow African American students were ostracized by the majority-white student body, and so in 1906, Callis and some of his peers started the first, intercollegiate Black Greek Letter Organization (BGLO), Alpha Phi Alpha. Since their founding, BGLOs have not only served to solidify bonds among many African American college students, they have also imbued them with a sense of purpose and a commitment to racial uplift—the endeavor to help Black Americans reach socio-economic equality. *A Pledge with Purpose* explores the arc of these unique, important, and relevant social institutions. Gregory S. Parks and Matthew W. Hughey uncover how BGLOs were shaped by, and labored to transform, the changing social, political, and cultural landscape of Black America from the era of the Harlem Renaissance to the civil rights movement. Alpha Phi Alpha boasts such members as Thurgood Marshall, civil rights lawyer and US Supreme Court Justice, and Dr. Charles Wesley, noted historian and college president. Delta Sigma Theta members include Bethune-Cookman College founder Mary McLeod Bethune and women's rights activist Dorothy Height. Huey P. Newton, co-founder of the Black Panther Party, who left an indelible mark on the civil rights movement, was a member of Phi Beta Sigma, while Dr. Mae Jemison, a celebrated engineer and astronaut, belonged to Alpha Kappa Alpha. Through such individuals, Parks and Hughey

demonstrate the ways that BGLO members have long been at the forefront of innovation, activism, and scholarship. In its examination of the history of these important organizations, *A Pledge with Purpose* serves as a critical reflection of both the collective African American racial struggle and the various strategies of Black Americans in their great—and unfinished—march toward freedom and equality.

Ion Channel Reconstitution C. Miller, 2013-11-09 It is now over 30 years since the idea of ion-conducting pores burst on the electrophysiological scene, 15 years since these were generally realized to be membrane-spanning proteins, and 10 years since the first observations of single ion channels from higher organisms were made. During the past 5 years, several integral membrane channel proteins have been purified in a functionally competent state: the nicotinic acetylcholine receptor, the Na⁺ channel, mitochondrial VDAC, and a variety of porins. The stage is thus set to attack ion channels in the same ways that biochemists have been attacking enzymes for decades: isolation followed by functional analysis in as simple a system as possible, with a view towards understanding the molecular mechanisms of the protein's behavior and how this is related to the underlying molecular structure. This is always a daunting task, all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in isolating functionally active channel proteins. In this volume, which can be considered a biochemically slanted companion to Sakmann and Neher's *Single-Channel Recording*, I have tried to present a view of the current landscape of ion-channel reconstitution. These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but, as importantly, the varied motivations for doing this kind of work.

Acute Myelogenous Leukemia Judith E. Karp, 2009-11-29 This is a timely compilation of new concepts in the molecular pathogenesis and molecular therapy of acute myelogenous leukemia (AML). The focus is on selected critical molecular determinants of AML pathogenesis and pathophysiology and the exploitation of these factors by diverse therapeutic agents and modalities. There is an emphasis throughout on the bidirectional flow of knowledge between the clinical and laboratory arenas.

Intracellular Messengers C.M. Taylor, 2012-12-02 This important new reference work offers an outstanding collection of articles devoted to the discussion of intracellular messengers. Extracellular stimuli (first messengers) bind to receptors on the plasma membrane of cells to trigger changes in the concentration of intracellular messengers (second messengers) which leads, in turn, to changes in cellular activity. However, the intracellular activities of so called third messengers may also be involved complicating the concept of a rigid sequence of events between receptor and response. The preference for the term

intracellular messengers, and, hence, the title of this volume, recognizes that a complex web of interactions between intercellular messengers determines the concentrations and ultimate effects of each.

Primates Edwin J. Atencio, Howard S. Bilofsky, June Bossinger, 2014-05-10 Nucleotide Sequences 1986/1987, Volume I: Primates presents data that reflect the information found in GenBank Release 44.0 of August 1986. This book provides information pertinent to the unique international collaboration between two leading nucleotide sequence data libraries, one based in Europe and one in the United States. Organized into one section, this volume begins with an overview of the sequences, some basic identifying information, and some of the biological annotations. This text then discusses the EMBL Nucleotide Sequence Data Library, an international center of fundamental research with its main focus in the fields of cell biology, molecular structures, instrumentation, and differentiation. This book discusses as well the GenBank database. This book is a valuable resource for molecular biologists and other investigators collecting the large number of reported DNA and RNA sequences and making them available in computer-readable form.

The Cholinergic Synapse Victor P. Whittaker, 2012-12-06 One of the most impressive works of scholarship in the field of experimental pharmacology has been the Heffter-Heubner Handbuch der experimentellen Pharmakologie, internationalized some years ago under the title Handbook of Experimental Pharmacology and kept up to date by a series of numbered Ergänzungen or supplementary volumes which have now replaced in importance the original Handbuch. These volumes constitute a valuable and continuously updated multi author review series of topics important in modern pharmacology and allied sciences. The Editorial Board of the Handbook invited me 2 years ago to undertake, as subeditor, the preparation of a new volume entitled The Cholinergic Synapse. A previous volume in this series, vol. 15, Cholinesterases and Anticholinesterase Agents, edited by GEORGE KOELLE, was published in 1963 and was far wider in scope than its title suggested: it was, in fact an authoritative summing up of the whole subject of cholinergic function and still has some value today as an account of the state of the art as it was at that time. Since then another excellent review, of a specific cholinergic synapse, has appeared in this series: this was vol. 42, Neuromuscular Junction, edited by ELEANOR ZAIMIS and published in 1976. A third volume, vol. 53, Pharmacology of Ganglionic Transmission, which appeared in 1980 and was edited by D. A. KHARKEVICH, includes important aspects of autonomic cholinergic function.

Combinatorial Pattern Matching Moshe Lewenstein, Gabriel Valiente, 2006-07-01 This book constitutes the refereed proceedings of the 17th Annual Symposium on Combinatorial Pattern Matching, CPM 2006, held in Barcelona, Spain, July 2006. The book presents 33 revised full papers together with 3 invited talks, organized in topical sections on data structures, indexing data structures, probabilistic and algebraic techniques, applications in molecular biology, string matching, data compression, and dynamic programming.

Evolution-adjusted Tumor Pathophysiology: Albrecht Reichle, 2013-07-01 Combined modularized therapies for metastatic cancer are pointing to central problems of communication among 'systems participants'. A communication theory explains 'social engineering', endogenously induced or by implementing non-normative boundary conditions. Evolution-adjusted tumor pathophysiology is borne by an evolution theory, which contrasts narrative evolution histories. The tool of rationalizations constituting the tumor's normativity (inflammation, immune response etc.) represents the non-genomic counterpart of the tumor genome and should be additionally assessed during tumor staging. Evolution-adjusted tumor pathophysiology allows implementing applied systems biology, a novel clinical and pharmaceutical

technology for bioengineering tumor response and personalizing tumor therapy. Combined modularized therapy, evolution-adjusted tumor pathophysiology, and 'universal' biomarkers concertedly address genetically based tumor heterogeneity.

The Retinoids Pascal Dollé, Karen Niederreither, 2015-04-13 The Retinoids: Biology, Biochemistry, and Disease provides an overview and synthesis of the retinoid molecules, from basic biology to mechanisms of diseases and therapy. Divided into five sections, the book covers retinoic acid signaling from biochemical, genetic, developmental, and clinical perspectives. The text is divided into five sections, the first of which examines vitamin A metabolic and enzymatic pathways. Focus then shifts to the role of retinoic acid signaling in development, and then to retinoids and physiological function. The book concludes with chapters on retinoids, disease and therapy. Comprehensive in scope and written by leading researchers in the field, The Retinoids: Biology, Biochemistry, and Disease will be an essential reference for biologists, biochemists, geneticists and developmental biologists, as well as for clinicians and pharmacists engaged in clinical research involving retinoids.

African American Fraternities and Sororities Tamara L. Brown, Gregory S. Parks, Clarenda M. Phillips, 2012-01-01 This second edition includes new chapters that address issues such as the role of Christian values in black Greek-letter organizations and the persistence of hazing. Offering an overview of the historical, cultural, political, and social circumstances that have shaped these groups, African American Fraternities and Sororities explores the profound contributions that black Greek-letter organizations and their members have made to America.

COX-2 Blockade in Cancer Prevention and Therapy Randall E. Harris, 2002-10-03 The revelation that aspirin and aspirin-like compounds have notable antineoplastic properties has revolutionized cancer research. COX-2 Blockade in Cancer Prevention and Therapy chronicles the evidence and presents exciting new opportunities for the use of cyclooxygenase-2 (COX-2) blockade in the prevention and treatment of cancer. The text is divided broadly into five areas. First, an historical overview documents the scientific discovery of COX-2 and the pharmaceutical development of nonsteroidal anti-inflammatory drugs (NSAIDs) designed for selective COX-2 inhibition. The process by which essential polyunsaturated fatty acids (PUFAs) stimulate prostaglandin biosynthesis and cancer development, and its interruption by COX-2 inhibition, is elucidated. This is followed by a section on the epidemiology of NSAIDs and cancers of the colon and breast, and other anatomic sites. These chapters reflect significant cancer protection owing to the regular use of common NSAIDs such as aspirin and ibuprofen. A section on animal models of carcinogenesis presents comprehensive evidence that general NSAIDs inhibit a variety of malignant neoplasms in vivo, and highlights recent findings which show that COX-2 blocking agents produce striking chemopreventive effects against colon cancer and breast cancer as well as other malignancies. Genetic models are presented confirming the critical role of COX-2 in carcinogenesis. Section IV then discusses the molecular biology of COX-2 vis-a-vis the role of COX-2 and, to a lesser extent, COX-1, in modulating a number of important processes in molecular carcinogenesis such as mutagenesis, cell division, angiogenesis, cell differentiation, and apoptosis.

Molecular Mechanisms of Hormone Action Ulrich Gehring, Ernst J.M. Helmreich, Günter Schultz, 2012-12-06 Recent years have seen tremendous progress in the field of hormone action and consequent signal transduction. The 40th Colloquium Mosbach was devoted to the discussion of results concerning the molecular process of hormone action, especially the processes following hormone binding to the corresponding receptors. Structural and functional aspects of steroid hormone receptors as well as ion-channel-coupled and enzyme-linked receptors were treated in detail. Particular interest focussed on the

latest results concerning transcriptional control, protein phosphorylation, the role of G-Proteins, oncogene proteins, involvement of phospholipases and the regulation of ion channels.

Acute Promyelocytic Leukemia Oussama Abl, Francesco Lo Coco, Miguel A. Sanz, 2018-04-25 This book provides a comprehensive overview on the clinical issues and biology of acute promyelocytic leukemia (APL) and on the molecular mechanisms of targeted therapy with ATRA and ATO. The text covers major topics such as the pathophysiology of APL coagulopathy, biologic and clinical differences between children and adults with APL, and the role of minimal residual disease monitoring. Additionally, the book summarizes historical, current, and future treatment strategies in both adults and children, while highlighting the most recent therapeutic recommendations for relapsed disease and the evolving indications for autologous and allogeneic stem cell transplant. This volume also features chapters focusing on secondary APL and therapy, late effects, rare presentations such as APL in the elderly and during pregnancy, and rare APL variants that may represent therapeutic challenges. Written by top experts in the field, *Acute Promyelocytic Leukemia: A Clinical Guide* is a valuable resource for clinicians and researchers who treat and investigate this disease in children and adults.
