Gendering Smart Mobilities Tanu Priya Uteng, Hilda Rømer Christensen, Lena Levin, 2019-12-20 This book considers gender perspectives on the 'smart' turn in urban and transport planning to effectively provide 'mobility for all' while simultaneously attending to the goal of creating green and inclusive cities. It deals with the conceptualisation, design, planning, and execution of the fast-emerging 'smart' solutions. The volume questions the efficacy of transformations being brought by smart solutions and highlights the need for a more robust problem formulation to guide the design of smart solutions, and further maps out the need for stronger governance to manage the introduction and proliferation of smart technologies. Authors from a range of disciplinary backgrounds have contributed to this book, designed to converse with mobility studies, transport studies, urban-transport planning, engineering, human geography, sociology, gender studies, and other related fields. The book fills a substantive gap in the current gender and mobility discourses, and will thus appeal to students

and researchers studying mobilities in the social, political, design, technical, and environmental sciences.

Shared mobility and MaaS Yves Crozet, Georgina Santos, Jean Coldefy, 2019-09-19 This CERRE report finds that to effectively reduce congestion and pollution in cities, policies should focus primarily on the rarest resource: space. Mobility as a Service (MaaS) also has a role to play in the transition towards truly sustainable mobility. But this is provided regulation guarantees that new mobility models complement and not substitute for public transport. European cities have been trying to enhance their mobility and transport systems, while reducing congestion, pollution, CO2 emissions, noise and accidents. Local transport policies across countries strive to encourage car drivers to switch to public transport, but with limited success. The authors of the report find that the lack of success of policies to encourage the switch to public transport is often due to the alleged trouble of using other transportation modes compared to the convenience of private cars. "If cities are to effectively reduce congestion and pollution, regulation of access to cities must change dramatically. Until now, the constraints on the use of cars have largely remained low", explain the authors. "An approach promising individual time savings will not benefit the collective interest. To be efficient, policies should focus primarily on the rarest resource for the community: space. Transport authorities must intervene on the uses of roads, sidewalks and pedestrian zones. It is up to them to define the balance between the different uses of roads". In addition, public authorities should significantly develop public transport systems that constitute a genuine, practical, fast, reliable, and affordable alternative. The lack of public transport in areas of disperse and low demand due to financial reasons also remains a critical issue to be addressed. The CERRE report also finds that new mobility services (such as shared cars or free-floating e-scooters) provide unprecedented opportunities to reduce the disutility users would face from simply switching from the private car to public or active transport. Mobility as a Service

(MaaS) enables users to change their routines, discover the variety of mobility services available and to combine former and new mobility services. Shared mobility providers may complement public transport, especially by supplying first and last mile solutions, and by serving areas where public transport is not financially viable. However, unless ridesharing replaces solo trips by car at a large scale, the impacts on congestion, pollution and CO2 emissions are likely to be neutral at best. Urban mobility public authorities cannot neglect the opportunities brought by new mobility services. Public authorities have to be more ambitious. They have to enlarge their spectrum of mobility services that will, in a financially sustainable way, ease user life and foster alternatives to solo car use. But to effectively deal with new mobility services authorities must develop new skills in the data and platforms areas. Platforms, information services and ticketing are crucial to increase the number of users of urban mobility services. Although digitalisation cannot be considered a magic wand, it plays a critical role in achieving this transition to new mobility services. For MaaS to develop, Mobility data must be gathered under the umbrella of Metropolitan Transport Authorities, who are the only trusted party able to do so. "Policies for the use of roads should discourage the use of individual cars and incentivise ride sharing. As long as individual cars can move freely and on the same roads and use services in the same conditions as shared vehicles, it is unlikely that MaaS and shared mobility will be successful. In addition, public authorities need to modernise and grasps the opportunities that digitisation and data offer for the transition to a truly sustainable mobility", conclude the authors.

Sustainable Nordic cities with focus on climate smart mobility
Mellin, Anna, Dahlstrand, Alice, Lewald, Anders, Mowitz, David, 2021-02-01 Available online:

<https://pub.norden.org/temanord2021-505/#> Sustainable Nordic cities with a focus on climate-smart mobility is one of four projects launched under the Swedish Presidency of the Nordic Council of

Ministers in 2018. The aim of the project is to contribute to a sustainable urban development by supporting the transition to fossil free and sustainable transportation in Nordic cities and their surrounding regions. The project involves collaborating and exchanging experiences with other Nordic countries to find solutions for charging electric vehicles and creating attractive and climate-smart urban transport. This report has been compiled from some of the most interesting applicable examples found in the Nordic countries. In here we present policy recommendations and good examples on how to accelerate the transition to climate-smart mobility and accessibility based firmly on these Nordic exchanges of knowledge and experiences.
