Cut-and-Cover Metro Structures Krishan Kaul, 2010-04-13 Because of their complexity and scale, metro structures capture all the essential aspects of a cut-and-cover structure, and so are given primary focus in this book. The design of a metro construction is outlined coherently and in detail; and the reader is shown how to apply this design process equally well to other, relatively simple, cut-and-cover structures. Geotechnical and structural engineering principles are combined with both design and construction practice to make this book a unique guide for engineers.

Achieving Sustainable Mobility Erling Holden,2016-03-16 Sustainable mobility has become the new imperative for transport policy. There have been a number of policy attempts at sustainable mobility globally, such as the development of more efficient conventional transport technologies, the promotion of efficient and affordable public transport systems and the encouragement of environmental awareness. Such policies have so often been presented as prerequisites for sustainable mobility that they are now taken for granted. But are any of these policies really successful? To what extent do they actually contribute (or fail to contribute) to sustainable mobility? Why do some policies succeed and others fail? Using an interdisciplinary approach which brings together various theories and methodologies, this book tests each of these policies - or hypotheses, as the author sees them - with detailed empirical investigations. It also argues that leisure-time travel should be included in any sustainable mobility policies, as it now accounts for 50 per cent of all annual travel distance in developed countries. The book concludes by suggesting fourteen theses of sustainable mobility for the EU and a new model for future best practice.

Yet we never truly see how these amazing feats of engineering work. Just how deep do the tunnels go? Where do the sewers, bunkers and postal trains run? And, how many tunnels are there under our streets? Each featured city presents a 'skyline of the underground' through specially commissioned cut-away illustrations and unique cartography. Drawing on geography, cartography and historical oddities, Mark Ovenden explores what our cities look like from the bottom up.

Green Oslo Dr Mark Luccarelli, Dr Per Gunnar Røe, 2013-02-28 As urban regions face the demand to decrease fossil fuel dependency, many cities in the developing world are undertaking initiatives designed to create a greener city by aiming for a more sustainable form of urban development and, to do so, they need to evaluate existing modes of transportation and patterns of land use. Focusing on Oslo, an early leader in urban environmental policy making and a European 'green city' award winner, it argues that this evaluation must adopt and integrate two approaches: firstly, as a process of ecological modernization based on a combination of transit, densification, and mixed use development and secondly, as an opportunity to reconsider the character and substance of the built environment as a reflection of natural values, landscapes and natural resources of the wider region. Environmental debate and concern is widespread in Oslo, and this is reflected in its earlier planning decisions to leave intact large forest reserves, its successful ecological restoration of the Oslo fjord, the importance of outdoor culture among its residents, the relatively progressive political agenda of Norway. This book provides an opportunity for a critical assessment of the limitations and opportunities inherent in 'green Oslo' and suggests the need for much broader integrative approaches. It concludes by

highlighting lessons which other cities might learn from Oslo.

The Unaccountable State of Surveillance Clive Norris, Paul de Hert, Xavier

L'Hoiry, Antonella Galetta, 2017-01-24 This book examines the ability of citizens across ten European countries to exercise their democratic rights to access their personal data. It presents a socio-legal research project, with the researchers acting as citizens, or data subjects, and using ethnographic data collection methods. The research presented here evidences a myriad of strategies and discourses employed by a range of public and private sector organizations as they obstruct and restrict citizens' attempts to exercise their informational rights. The book also provides an up-to-date legal analysis of legal frameworks across Europe concerning access rights and makes several policy recommendations in the area of informational rights. It provides a unique and unparalleled study of the law in action which uncovered the obstacles that citizens encounter if they try to find out what personal data public and private sector organisations collect and store about them, how they process it, and with whom they share it. These are simple questions to ask, and the right to do so is enshrined in law, but getting answers to these questions was met by a raft of strategies which effectively denied citizens their rights. The book documents in rich ethnographic detail the manner in which these discourses of denial played out in the ten countries involved, and explores in depth the implications for policy and regulatory reform.
