**Road to Nowhere** Paris Marx, 2022-07-05 How to build a transportation system to provide mobility for all Road to Nowhere exposes the flaws in Silicon Valley's vision of the future: ride-hailing services such as Uber and Lyft to take us anywhere; electric cars to make them 'green'; and automation to ensure transport is cheap and ubiquitous. Such promises are implausible and potentially dangerous. As Paris Marx shows, these technological visions are a threat to our ideas of what a society should be. Electric cars are not a silver bullet for sustainability, and autonomous vehicles won't guarantee road safety. There will not be underground tunnels to eliminate traffic congestion, and micromobility services will not replace car travel any sooner than we will see the arrival of the long-awaited flying car. In response, Marx offers a vision for a more collective way of organizing transportation systems that considers the needs of poor, marginalized, and vulnerable people. The book argues that rethinking mobility can be the first step in a broader reimagining of how we design and live in our future cities. We must create streets that allow for social interaction and conviviality. We need reasons to get out of our cars and to use public means of transit determined by community needs rather than algorithmic control. Such decisions should be guided by the search for quality of life rather than for profit.

**Engine of modernity** Masha Belenky, 2020-02-28  
This electronic version has been made available

under a Creative Commons (BY-NC-ND) open access license. Engine of modernity examines the connection between public transportation and popular culture in nineteenth-century Paris through a focus on the omnibus - a horse-drawn vehicle of urban transport. The omnibus generated innovations in social practices by compelling passengers of diverse backgrounds to interact within the vehicle's close confines. The arrival of the omnibus in the streets of Paris and in the pages of popular literature acted as a motor for a fundamental cultural shift in how people thought about the city, its social life, and its artistic representations. At the intersection of literary criticism and cultural history, Engine of modernity argues that the omnibus was a metaphor through which writers and artists explored evolving social dynamics of class and gender, meditated on the meaning of progress and change, and reflected on one's own literary and artistic practices.

### **Transport and Town Planning** Jean

Laterrasse, 2019-01-24 In a context where climate change urgently requires us to alter our paradigms, this book explores the possibilities of cities that are both more energy efficient and more respectful of the environment. Based on the observation that urban planning has been detrimentally affected by the compartmentalization of knowledge and practices, this book is conceived as a dialog between transport and urban planning on the one hand, and between engineering and social science on the other. Systemic analysis and a historical approach, integrating the teachings of the last two centuries, constitute at the methodological level the framework in which this dialog unfolds. Based on examples of good practice, *Transport and Town Planning* identifies an effective set of levers of action and proposes an original method to guide and accompany urban transition with a large share of the initiative reserved for the actors concerned.
