God's People Count Carl Barrett,2023-10-17 We are undoubtedly living in a society and culture that is growing stranger by the day—creating more distance between others, minute by minute. It seems that people are living in their own little bubbles and silos more than ever—with no interest in connecting with people effectively. And it is evident that the rise of the digital age is affecting people mentally and emotionally, leading to voidness and isolation and a sense of hopelessness and helplessness. Billions of people are connecting with an unproductive device in their hands when it should be the word of God! There is no spiritual value when we allow the things of this world to consume our lives more than God's divine nature. Do we really think anything will improve in our homes, communities, churches, schools, country, and globally if we're not grounded and connected in the Truths of his word? We must realize that connecting with humans physically, emotionally, and spiritually is how God designed us. Just like our Creator wants a relationship with you and me, he wants us to bond with others so they can also see the experience of his abundant blessings and goodness in our lives. We cannot afford to be on the sidelines because it's all about cultivating genuine care for God's creation and putting it into practice for the sake of ourselves and others, now more than ever.

People Count! James N. Rosenau,2015-12-03 *People Count!* rests on a single but important premise: As the world shrinks and becomes ever more complex, so have people-as networked individuals-become ever more central to the course of events. This book seeks to depict a new era by analyzing the basic roles people occupy in their family, community, and society, including the wider world.

People Count Susan Landau,2021-04-06 An introduction to the technology of contact tracing and its usefulness for public health, considering questions of efficacy, equity, and privacy. How do you stop a pandemic before a vaccine arrives? Contact tracing is key, the first step in a process that has proven effective: trace, test, and isolate. Smartphones can collect some of the information required by contact tracers--not just where you've been but also who's been near you. Can we repurpose the tracking technology that we carry with us--devices with GPS, Wi-Fi, Bluetooth, and social media connectivity--to serve public health in a pandemic? In *People Count*, cybersecurity expert Susan Landau looks at some of the apps developed for contact tracing during the COVID-19 pandemic, finding that issues of effectiveness and equity intersect. Landau explains the effectiveness (or ineffectiveness) of a range of technological interventions, including dongles in Singapore that collect proximity information; India's biometric national identity system; Harvard University's experiment, TraceFi; and China's surveillance network. Other nations rejected China-style surveillance in favor of systems based on Bluetooth, GPS, and cell towers, but Landau explains the limitations of these technologies. She also reports that many current apps appear to be premised on a model of middle-class income and a job that can be done remotely. How can they be effective when low-income communities and front-line workers are the ones who are hit hardest by the virus? COVID-19 will not be our last pandemic; we need to get this essential method of infection control right.

Pattern Recognition and Machine Vision Patrick Shen-Pei Wang,2010 In recent years, there has been a growing interest in the fields of pattern recognition and machine vision in academia and industries. New theories have been developed with new technology and systems designs in both hardware and software. They are widely applied to our daily life to solve real problems in diverse areas such as science, engineering, agriculture, e-commerce, education, robotics, government, medicine, games and animation, medical imaging analysis and diagnosis, military, and national security. The foundation of this field can be traced back to the late Prof. King-Sun Fu, one of the founding fathers of pattern recognition, who, with visionary insight, founded the International Association for Pattern Recognition in 1978. Almost 30 years later, the world has witnessed this field's rapid growth and development. It is probably true to say that most people are affected by or use applications of pattern recognition in daily life. Today, on the eve of 25th anniversary of the unfortunate and untimely passing of Prof. Fu, we are proud to produce this collection works from world renowned professionals and experts in pattern recognition and machine vision in honor and memory of the late Prof. King-Sun Fu. We hope this book will help further promote not only fundamental principles, systems, and technologies but also the vast range of applications that help in solving problems in daily life.

Young People Re-Generating Politics in Times of Crises Sarah Pickard, Judith Bessant, 2017-07-31 This book provides insight into the diverse ways young people from around the world are regenerating politics in innovative and multifaceted ways. The authors, who include academics and activists, challenge claims that young people are apolitical, apathetic and living up to the 'me generation' stereotype. Contributions cover a rich body of case examples of traditional and new forms of youth politics in response to situated injustices and political and socio-economic crises. Significant and optimistic, the collection presents strong evidence from across the globe that these developments are not isolated incidences, but are in fact part of a systemic, large-scale transformation leading to a regeneration of the political landscape by young people. The book is aimed at students and scholars in the fields of politics, sociology, policy studies and youth and childhood studies.
