**A Nation in Search of Its Nationhood** Juan Manuel Pérez,2023-11-16 When the Liberal Party reached power in Panama in 1912 it started a period that lasted until 1941. A period in which Panamanians, due to the special circumstances under which the country became independent, the presence of the United States, and of thousands of foreign workers in its territory, began to doubt and asked themselves if they were truly independent. The American presence impacted politics and a sense of inferiority developed because people believed that

nothing could be accomplished without the blessings of the United States. In the middle of chaotic political scene and self-doubt, the country retreated to its Hispanic past and began an effort to Hispanize in the face of so much foreign presence and influence, and tried to show the world that Panama was an independent country with history and traditions, and not an appendage of the United States. Belisario Porras, who became president in 1912, emphasized the Hispanic past and built statues to Balboa and Cervantes. Acción Comunal, founded in 1923, promoted nationalism and criticized the corrupt nature of politics. It led a successful campaign against the 1926 Treaty and a coup in 1931. This new generation repudiated the generation that made the 1903 Treaty. "Panama for Panamanians" became one of the catch phrases for the Panamanian youth of the 1920's and 1930's, which found in the brothers Harmodio and Arnulfo Arias the leading exponents.

**Automating Crime Prevention, Surveillance, and Military Operations** Aleš Završnik, Vasja Badalič, 2021-08-19 This interdisciplinary volume critically explores how the ever-increasing use of automated systems is changing policing, criminal justice systems, and military operations at the national and international level. The book examines the ways in which automated systems are beneficial to society, while addressing the risks they represent for human rights. This book starts with a historical overview of how different types of knowledge have transformed crime control and the security domain, comparing those epistemological shifts with the current shift caused by knowledge produced with high-tech information technology tools such as big data analytics, machine learning, and artificial intelligence. The first part explores the use of automated systems, such as predictive policing and platform policing, in law enforcement. The second part analyzes the use of automated systems, such as algorithms used in sentencing and parole decisions, in courts of law. The third part examines the use and misuse of automated systems for surveillance and social

control. The fourth part discusses the use of lethal (semi)autonomous weapons systems in armed conflicts. An essential read for researchers, politicians, and advocates interested in the use and potential misuse of automated systems in crime control, this diverse volume draws expertise from such fields as criminology, law, sociology, philosophy, and anthropology.

Aviation Security, Privacy, Data Protection and Other Human Rights: Technologies and Legal Principles Olga Mironenko Enerstvedt, 2017-09-18 This book sheds light on aviation security, considering both technologies and legal principles. It considers the protection of individuals in particular their rights to privacy and data protection and raises aspects of international law, human rights and data security, among other relevant topics. Technologies and practices which arise in this volume include body scanners, camera surveillance, biometrics, profiling, behaviour analysis, and the transfer of air passenger personal data from airlines to state authorities. Readers are invited to explore questions such as: What right to privacy and data protection do air passengers have? How can air passenger rights be safeguarded, whilst also dealing appropriately with security threats at airports and in airplanes? Chapters explore these dilemmas and examine

approaches to aviation security which may be transferred to other areas of transport or management of public spaces, thus making the issues dealt with here of paramount importance to privacy and human rights more broadly. The work presented here reveals current processes and tendencies in aviation security, such as globalization, harmonization of regulation, modernization of existing data privacy regulation, mechanisms of self-regulation, the growing use of Privacy by Design, and improving passenger experience. This book makes an important contribution to the debate on what can be considered proportionate security, taking into account concerns of privacy and related human rights including the right to health, freedom of movement, equal treatment and non-discrimination, freedom of thought, conscience and religion, and the rights of the child. It will be of interest to graduates and researchers in areas of human rights, international law, data security and related areas of law or information science and technology. I think it will also be of interest to other categories (please see e.g. what the reviewers have written) I think that the book would be of great appeal for airports managing bodies, regulators, Civil Aviation Authorities, Data Protection Authorities, air carriers, any kind of security companies, European Commission Transport Directorate, European Air Safety Agency (EASA), security equipment producers, security agencies like the US TSA, university researchers and teachers. Lawyers (aviation, privacy and IT lawyers), security experts, aviation experts (security managers of airports, managers and officers from ANSPs and National Aviation Authorities), decision makers, policy makers (EASA, EUROCONTROL, EU commission)

**Consistent Distributed Storage** Vincent Gramoli, Nicolas Nicolaou, Alexander A. Schwarzmann, 2022-05-31 Providing a shared memory abstraction in distributed systems is a powerful tool that can simplify the design and implementation of software systems for networked platforms. This enables the system designers to work with abstract readable and writable objects without the need to deal with the complexity and dynamism of the underlying platform. The key property of shared memory implementations is the consistency guarantee that it provides under concurrent access to the shared objects. The most intuitive memory consistency model is atomicity because of its equivalence with a memory system where accesses occur serially, one at a time. Emulations of shared atomic memory in distributed systems is an active area of research and development. The problem proves to be challenging, and especially so in distributed message passing settings with unreliable components, as is often the case in networked systems. We present several approaches to implementing shared memory services with the help of replication on top of message-passing distributed platforms subject to a variety of perturbations in the computing medium.

**Global Data Protection in the Field of Law Enforcement** Cristina Blasi Casagran, 2016-06-10 This study examines a key aspect of regulatory policy in the field of data protection, namely the frameworks governing the sharing of data for law enforcement purposes, both within the EU and between the EU and the US and other third party countries. The work features a thorough analysis of the main data-sharing instruments that have been used by law enforcement agencies and the intelligence services in the EU and

in the US between 2001 to 2015. The study also explores the challenges to data protection which the current frameworks create, and explores the possible responses to those challenges at both EU and global levels. In offering a full overview of the current EU data-sharing instruments and their data protection rules, this book will be of significant benefit to scholars and policymakers working in areas related to privacy, data protection, national security and EU external relations.
