Public Relations and the Social Web Rob Brown,2009-04-03 The effect of the internet on public relations is the single biggest subject of current conversation in the public relations industry. As the world of communications changes beyond recognition, those seeking to communicate must revise and revolutionise their approach. Public Relations and the Social Web explores the way in which communications is changing and looks at what this means for communicators working across a range of industries, from entertainment through to politics. The book examines emerging public relations practices in the digital environment and shows readers how digital public relations campaigns can be structured. Including information on new communication channels such as blogs, wikis, RSS, social networking and SEO, Public Relations and the Social Web is essential reading for public relations practitioners, students of public relations, and those who work in related areas such as journalism and web construction and design.

Preventing Web Attacks with Apache Ryan C. Barnett,2006-01-27 The only end-to-end guide to securing Apache Web servers and Web applications Apache can be hacked. As companies have improved perimeter security, hackers have increasingly focused on attacking Apache Web servers and Web applications. Firewalls and SSL won't protect you: you must systematically harden your Web application environment. Preventing Web Attacks with Apache brings together all the information you'll need to do that: step-by-step guidance, hands-on examples, and tested configuration files. Building on his groundbreaking SANS presentations on Apache security, Ryan C. Barnett reveals why your Web servers represent such a compelling target, how significant exploits are performed, and how they can be defended against. Exploits

discussed include: buffer overflows, denial of service, attacks on vulnerable scripts and programs, credential sniffing and spoofing, client parameter manipulation, brute force attacks, web defacements, and more. Barnett introduces the Center for Internet Security Apache Benchmarks, a set of best-practice Apache security configuration actions and settings he helped to create. He addresses issues related to IT processes and your underlying OS; Apache downloading, installation, and configuration; application hardening; monitoring, and more. He also presents a chapter-length case study using actual Web attack logs and data captured "in the wild." For every sysadmin, Web professional, and security specialist responsible for Apache or Web application security.

   Mobile Agents for Telecommunication Applications Ahmed Karmouch,Thomas Magedanz,Jaime Delgado,2003-06-30 Research in the telecommunications ?eld suggests that future network infrastructures will be composed of sensors, wireless devices, personal digital assistants, networked appliances and numerous types of services. This brings up key issues such as unfamiliar users and service interfaces, discovering services that match user's needs, ?nding and tracking people and resources, establishing useful contacts and appropriate associations between resources and users, and managing a large number of dynamic network entities all of which must be performed in an

automated and proactive manner with a certain
degree of autonomy and mobility. These are the
main characteristics exhibited by mobile software
agent behavior, making the technology more
suitable for future telecommu- cation applications
and services. It also reveals the tremendous
potential for the mobile agent paradigm. The
potential complexity of mobile agent operation
requires that mechanisms exist on several levels
to coordinate its activities. For this purpose
research and development on various forms of
mobile agents continues to grow in a staggering
fashion. Age- based applications and services such
as network management, e-commerce, information
gathering on the Internet, mobile communications,
active networking, and most recently ad hoc
communications are becoming increasingly popular
and continue to contribute to the development and
to the success of mobile agent technology. In
addition it is well established that mobile agents
is an ideal sister technology for mobile ad hoc
networks where users, applications, services,
devices and networks are mobile and dynamically
con?gurable.

**Re-Engineering einer Web-Site mit den Methoden
des Software Engineering** Bernd
Steinwender,2002-03-07 Inhaltsangabe:Einleitung:
Das Entwickeln oder Programmieren einer Web-Site
lässt sich gut vergleichen mit der Entwicklung
eines typischen Softwareprojekts. Es ist genauso
eine Analyse der vorhandenen Infrastruktur als
auch eine Anforderungsanalyse an das
Ergebnissystem zu erstellen. Diese Ergebnisse
werden anschließend im Design konkretisiert und
bis auf die Modulebene vordefiniert. Danach folgt
die Implementierung, die abschließende Evaluierung
rundet den Entwicklungsprozess ab und das System
wird vom Auftraggeber übernommen. Diese
Diplomarbeit soll nun anhand des Projekts Re-
Engineering einer Web-Site für das Institut

Communications Engineering genau diesen Zyklus durchexerzieren und eine Antwort auf die Frage finden: Sind die Methoden des Software Engineering tatsächlich ausreichend, um auch eine Web-Site erfolgreich erstellen zu können oder sind zusätzliche Entwicklungsschritte notwendig? Das Hauptaugenmerk dieser Arbeit liegt also neben der Entwicklung einer dynamischen Web-Site auch auf dem Entwicklungsprozess selbst.
