Dietary Fibers: Chemistry and Nutrition George Inglett, 2012-12-02 Dietary Fibers: Chemistry and Nutrition contains the proceedings of a symposium on Dietary Fibers: Chemistry and Nutrition held during the American Chemical Society meeting in Miami Beach, Florida, on September 11-15, 1978. The papers explore the chemical and nutritional aspects of dietary fibers and cover a wide range of topics dealing with analysis, biochemistry, medicinal chemistry, microbiology, and physiology. This book is comprised of 18 chapters and begins by assessing the interactions between small molecules and hydrated polymer networks, paying particular attention to some structural features of gel-fiber systems as well as partitioning and transport phenomena. The complex structure of dietary fibers found in cell walls are reviewed, along with the metabolic effects of

dietary fibers related to mineral binding, blood cholesterol and other lipids, glucose tolerance, bile acids, and carcinogens and cocarcinogens. The interactions of metabolic substances with polysaccharides and lignins are also examined. This monograph will be a valuable resource for biochemists, nutritionists, and nutritional scientists.

Indirect Food Additives and Polymers Victor O. Sheftel, 2000-03-30 Now, more than ever, foods come packaged in containers designed for direct cooking or heating, which often causes the movement of substances - indirect additives - into foods. Because of their unique characteristics, plastics or polymeric materials (PM) have become the most important packaging material for food products. The safety assessment of plastics intended for use in contact with foodstuffs or drinking water continues to present a serious challenge. *Indirect Food Additives and Polymers: Migration and Toxicology* studies the potential hazards of indirect additives for human health and develops recommendations for their safe manufacture and use. It contains an impressive review of basic regulatory, toxicological, and other scientific information necessary to identify, characterize, measure, and predict the hazards of nearly 2,000 plastic-like materials employed in packaging. The author presents the data underlying federal regulations - previously unavailable in a single volume. The entry for each chemical provides: Prime Name Molecular or Structural Formula Molecular Mass Synonyms CAS Number RTECS number Properties Application and Exposure Migration Data Acute Toxicity Repeated Exposure Short-Term Toxicity Long-Term Toxicity Immunotoxicity of Allergenic Effect Reproductive Toxicity Mutagenicity Carcinogenicity Chemobiokinetics Standards Guidelines Regulations Recommendations References International in scope, the *Handbook of Indirect Polymeric Additives in Food and Water: Migration and Toxicology* offers comprehensive data on the toxic effects of polymeric materials and their ingredients. You will find the most information on

plastics and polymeric materials- their migration and toxicology - in this resource.

The Complete Technology Book on Synthetic Resins with Formulae & Processes NIIR Board of Consultants & Engineers, 2005-08-20 Synthetic resin is typically manufactured using a chemical polymerization process. This process then results in the creation of polymers that are more stable and homogeneous than naturally occurring resin. Since they are more stable and are cheaper, various forms of synthetic resin are used in a variety of products such as plastics, paints, varnishes, and textiles. There are various kinds of synthetic resins; silicones resins, polyvinyl pyrrolidone, gum arabic, epoxy resins, guar gum, carrageenan, carboxymethyl cellulose, etc. Resins are polymeric compound which are available in nature and are also manufactured by synthetic routes. Some resins are also manufactured by partial modification of natural precursor polymer by chemical. Silicones are unique among the commercially important polymers both in chemistry and in variety of industrial applications. Silicones can be applied as high temperature insulating varnishes,

impregnates to be used with glass, asbestos, mica products and encapsulating agents for electrical components. Water borne dispersions or emulsions, for example emulsions of vinyl or acrylic copolymers are popular in decorative coatings. The applications of synthetic resins are seen in some important industries like paint industry, adhesive industry, the textile industry, paper, paint, agricultural industry, petroleum industry etc. As it can be seen that there is an enormous scope of application of resins hence it is one of the major field to venture. Some of the fundamentals of the book are electrodepositable pigmented coating compositions based on alkyd resins, phosphorus containing allyl resins, vapour permeation cure technology, characterization of water soluble anodic electrodepositive pigmented coating compositions, protection of concrete substrates, zinc rich coatings, electro deposition primers, developments in thermosetting powder coatings, application of powder coatings, polyethylene glycol, petroleum recovery and processing, industries using polyethylene glycols, silicones resins, preparation & formulation of silicone resin based coatings, pigments and dyes etc. Synthetic Resins are used by lot of industries. Yet, little emphasis has been placed on the comparative value on functionality of polymeric material as a class. These resins have been classified in separate categories, usually in terms of their Chemistry, sources or end uses. The present book contains formulae, processes and other valuable details for various synthetic resins. This is very useful book for those concerned with development, consultants, research scholars, new entrepreneurs existing units, institutional libraries etc.

Allergic Reactions to Drugs Alain L. de Weck, H. Bundgaard, 2012-12-06 According to most studies, allergic reactions represent 35%-50% of all untoward reactions to drugs, yet the pharmacological literature concerning the clinical aspects, diagnosis, and pathophysiological mechanisms of drug allergy is markedly less extensive than reports dealing with the toxicological or pharmacological effects of drugs. The main reasons for this state of affairs may be on the one hand that until a few years ago the pathophysiological mechanisms of the various types of allergic reactions were not well understood, and on the other hand that objective diagnosis of a drug allergy is still fraught with serious difficulties. Drug allergy is still an unpopular topic for most allergologists and pharmacologists; this is reflected by the fact that despite their frequency, allergic reactions to drugs still occupy a relatively small proportion of space in most pharmacology handbooks and in classical books devoted to the side effects of drugs. There has recently been considerable progress in research into the immunological and pathophysiological events occurring in allergic reactions, and on that basis investigations of various drug allergies have also yielded new objective findings. Consequently, it was natural to attempt a review of the most frequent and important drug allergies in the form of a handbook. We originally intended to present a comprehensive review of all drug allergies, but the realization of this goal soon became more difficult than we had at first imagined.

Handbook of Water-soluble Gums and Resins Robert L. Davidson, 1980

The Complete Book on Gums and Stabilizers for Food Industry H. Panda, 2010-10-01 Gums are plant flours (like starch or arrowroot) that make foods & other products thick. Gums are used in foods for many reasons besides being used as a thickener. Gums are important ingredient in producing food emulsifier, food additive, food thickener & other gum products. The main reason for

adding a gum or hydrocolloid to a food product is to improve its overall quality. India is the largest producer of gums specially guar gum products. Similarly stabilizers are an indispensable substance in food items when added to the food items, they smoothen uniform nature and hold the flavouring compounds in dispersion. Gum technology stabilizers are carefully controlled blends of various food ingredients. Most processed foods need some sort of stabilization at some point during production, transportation, storage and serving. The science and technology of hydrocolloids used in food and related systems has seen many new developments and advances over recent years. The breadth and depth of knowledge of gums and stabilizers has increased tremendously over the last two decades, with researchers in industry and academia collaborating to accelerate the growth. Gums as food constituents or as food additives can influence processing conditions in the following ways; retention of water, reduction of evaporation rates, alteration of freezing rates, modification of ice crystal formation and participation in chemical reactions. Some of the fundamentals of the book are functions of gum, typical food applications, gums in food suspensions, rheology and characters of gums, natural product exudates, flavor fixation, ice cream, ices and sherbets, gelation of low methoxyl pectin, seaweed extracts, microbial gums, transformation of collagen to gelatin, cellulose gums, dairy food applications, bakery product applications, analysis of hydrocolloids, gums in food products, general isolation of gums from foods, identification of gums in specific foods, group analysis and identification schemes, group identification methods, qualitative group analysis etc. This book contains rheology of gums, plant sheet gums, microbial gums, cellulose gums and synthetic hydrocolloids different stabilizers used in food industry. The book will be very resourceful to all its readers, new entrepreneurs, scientist, food technologist, food industries etc.

Green Electrospinning Nesrin Horzum, Mustafa M. Demir, Rafael Muñoz-Espí, Daniel Crespy, 2019-07-22 The last two decades have seen electrospinning of nanofibers performed mainly from solutions of toxic organic solvents. The increase in demand for scaling up electrospinning in recent years therefore requires an environmentally friendly process free of organic solvents. This book addresses techniques for clean and safe electrospinning in the fabrication of green nanofibers and their potential applications.

Handbook of Less-Common Nanostructures Boris I. Kharisov, Oxana Vasilevna Kharissova, Ubaldo Ortiz-Mendez, 2012-03-19 As nanotechnology has developed over the last two

decades, some nanostructures, such as nanotubes, nanowires, and nanoparticles, have become very popular. However, recent research has led to the discovery of other, less-common nanoforms, which often serve as building blocks for more complex structures. In an effort to organize the field, the Handbook of Less-Common Nanostructures presents an informal classification based mainly on the less-common nanostructures. A small nanotechnological encyclopedia, this book: Describes a range of little-known nanostructures Offers a unifying vision of the synthesis of nanostructures and the generalization of rare nanoforms Includes a CD-ROM with color versions of more than 100 nanostructures Explores the fabrication of rare nanostructures, including modern physical, chemical, and biological synthesis techniques The Handbook of Less-Common Nanostructures discusses a classification system not directly related to the dimensionality and chemical composition of nanostructure-forming compounds or composite. Instead, it is based mainly on the less-common nanostructures. Possessing unusual shapes and high surface areas, these structures are potentially very useful for catalytic, medical, electronic, and many other applications.

Active Ingredients Used in Cosmetics Council of Europe. Committee of Experts on Cosmetic Products, 2008-01-01 Ingredients are used in cosmetics to give them specific properties. Certain ingredients, so called active ingredients, may produce pharmacological or toxic effects under certain conditions. Cosmetic products containing such ingredients may pose a health risk both because of their potential toxicity and because they may mask underlying serious diseases and consequently cause a dangerous delay in diagnosis and treatment. The objective of this study is to give safety information on certain active ingredients which give raise to toxicological concerns and for which restrictions of use in cosmetics should be considered. Monographs were prepared for 45 active ingredients for which no specific regulations exist including, inter alia, information about uses,

properties, a risk evaluation of the use in cosmetic products considering as toxicological endpoints both systemic and local effects. Each monograph includes a bibliography, conclusions and recommendations. The study complements a series of three volumes containing monographs about the safety of certain natural ingredients used in cosmetics and will serve as a useful reference in the field, for health authorities, manufacturers and health professionals in particular.
