It's Money Charles Moore, 2020-11-01 Because most people and their countries seek wealth and power, and because money and credit are the biggest single influence on how wealth and power rise and decline, if one does not seek knowledge of how money works, one cannot understand the biggest driver of politics within and between countries; hence one cannot understand how the world order works. If one doesn't understand how the world order works, one can't understand the post-pandemic debt tsunami that's coming. I believe that the times ahead will be radically different from the times we have experienced so far in our lifetimes. It is indeed quite astonishing that money, ever-present in our lives, is so poorly understood; even by many economic experts themselves. This incomprehension stems from the deliberate efforts of the financial sector to "obscure its activities" in order to maintain its omnipotence. This book seeks to address this "crisis of ignorance" by providing an easily understood and comprehensive understanding of money in the hope of empowering people against finance's grip over their lives and those of their society. The digital revolution post-pandemic, will lead to a radical departure from the traditional model of monetary exchange. The creation of a Digital Financial Market Infrastructure will underpin the unbundling and re-bundling of the functions of money within society. Although digital money itself is not new to modern economies, digital legal tender (DLT), which exists without any Ledger or Central Bank, will facilitate instantaneous peer-to-peer transfers of value in a way that today is impossible. The importance of digital connectedness, will often supersede the importance of macroeconomic links, and lead to the establishment of "Digital Financial Markets" linking the currency to membership of a particular financial market rather than to a specific country. Capitalism underpins wealth generation and hence the existence of a free digital financial market. This book seeks to transform Money into a digital currency, which supports a more equitable access to capital, and ensure its convertibility into a universal World Currency Unit as digital legal tender. Digital currencies without borders may also cause an upheaval of the international monetary system: countries that are socially or digitally integrated with their neighbours may face digital dollarization, and the prevalence of systemically important platforms could lead to the emergence of digital currency areas that transcend national borders. Digital legal tender, within a multiplicity of currencies, ensures that money as a public good, remains a relevant medium of exchange which achieves payment finality to all transactions. Additionally, the universal supranational-currency, the World Currency Unit is defined to support the global transfer of value between any two people on the planet today, without the need for any treaties, or financial service intermediaries. Universal access to capital which is readily convertible to globally trusted units of account combined with a censorship-resistant means of payment underpins global trade, will improve market access for holders of low per-unit value, producers, and consumers in developing and developed countries. The Vision is a Borderless Global Market, underpinning universal wealth creation, which never closes... This book defines the Universe of Discourse(domain) and hence creates a shared conceptual schema (or language) within which to communicate and deploy a Digital Currency, to achieve universal legal finality to all financial transactions.

Library Automation Dania Bilal, 2014-03-26 Recent advances in technology such as cloud computing, recent industry standards such as RFID, bibliographic standards like RDA and BIBFRAME, the increased adoption of open source integrated library systems (ILS), and continued shift in users' expectations have increased the complexity of the decision regarding ILS for all types of libraries. Recent advances in technology such as cloud computing, recent industry standards such as RFID, bibliographic standards like RDA and BIBFRAME, the increased adoption of open source integrated library systems (ILS), and continued shift in users' expectations have increased the complexity of the decision regarding ILS for all types of libraries. In a complete re-envisioning of the previous edition, *Automating Media Centers and Small Libraries: A Microcomputer-Based Approach*, Dania Bilal conceptualizes library automation in the Library Automation Life Cycle (LALC) that is informed by the systems development lifecycle (SDLC). She explains how the next-generation discovery services supported in the library services platforms (LSPs) provide a single point of access to library content in all types and formats, thereby offering a unified solution to managing library operations. The book covers methods of analyzing user requirements, describes how to structure these requirements in RFPs, and details proprietary and open-source integrated library systems (ILSs) and LSPs for school, public, special, and academic libraries. Up-to-date information is provided about ILS software installation and testing, software and hardware architecture such as single- and multi-tenant SaaS and PaaS and IaaS, and usability assessment strategies for evaluating the ILS or LSP. The author concludes by describing what is likely coming next in the library automation arena.

Management Enabling the Future Internet for Changing Business and New Computing Services Choong Seon Hong, Toshio Tonouchi, Yan Ma, Chi-Shih Chao, 2009-09-19 We are delighted to present the proceedings of the 12th Asia-Pacific Network Operations and Management Symposium (APNOMS 2009), which was held in Jeju, Korea, during September 23–25, 2009. Recently, various convergences in wired and wireless networks, and convergence of telecommunications and broadcastings, are taking place for ubiquitous multimedia service provisioning. For example, broadband IP/MPLS wired networks are actively converged with IEEE 802.11e wireless LAN, IEEE 802.16 Wireless MAN, 3G/4G wireless cellular networks, and direct multimedia broadcast (DMB) networks. For efficient support of service provisioning for ubiquitous multimedia services on the broadband convergence networks, well-designed and implemented network operations and management functions with QoS-guaranteed traffic engineering are essential. The converged network will open the way for a new world with emerging new businesses and computing services. The Organizing Committee (OC) selected "Management Enabling the Future Internet for Changing Business and New Computing Services" as the timely theme of APNOMS 2009. Contributions from academia, industry and research institutions met these challenges with 173 paper submissions, from which 41 high-quality papers (23.7% of the submissions) were selected for technical sessions as full papers, and 32 papers were selected as short papers. In addition, we had nine papers in innovation sessions for on-going research. Diverse topics were covered, including Traffic Engineering, Configuration and Fault Management,
