Making Sense of Field Research Sheila Pontis, 2018-07-17 Learn how to use field research to bring essential people-centred insights to your information design projects. Information design is recognized as the practice of making complex data and information understandable for a particular audience, but what's often overlooked is the importance of understanding the audience themselves during the information design process. Rather than rely on intuition or assumptions, information designers need evidence gathered from real people about how they think, feel, and behave in order to inform the design of effective solutions. To do this, they need field research. If you're unsure about field research and how it might fit into a project, this book is for you. This text presents practical, easy-to-follow instructions for planning, designing, and conducting a field study, as well as guidance for making sense of field data and translating findings into action. The selection of established methods and techniques, drawn from social sciences, anthropology, and participatory design, is geared specifically toward information design problems. Over 80 illustrations and five real-world case studies bring key principles and methods of field research to life. Whether you are designing a family of icons or a large-scale signage system, an instruction manual or an interactive data visualization, this book will guide you through the necessary steps to ensure you are meeting people's needs.

Bandwagoning in International Relations: China, Russia, and Their Neighbors Dylan Motin,2024-04-02 Whether states balance against or bandwagon with threatening great powers remains an unsolved problem for international relations theory. One school argues that military power compels minor powers to accommodate threats, while another defends that it elicits balancing instead. With the emergence of potential hegemonies in both Asia and Europe — namely China and Russia — understanding state alignment is more

urgent than ever. This book shows that bandwagoning has been a rare choice in contemporary Asia and Europe. The only states that chose bandwagoning with China or Russia faced both conflicts with third rivals and low levels of U.S. assistance. Going further, I divide bandwagoning between full alignment, survival accommodation, and profit accommodation. Bandwagoners choose among these three options based on the severity of the threat posed by the potential hegemon, the intensity of third conflicts, and the level of U.S. assistance. I test this novel theory against three European (Armenia, Belarus, and Serbia) and four Asian (Cambodia, Myanmar, North Korea, and Pakistan) cases. This study is the first to provide an exhaustive and compelling explanation of bandwagoning fully compatible with neorealism and adds to the balancing-bandwagoning debate. Beyond scholarly implications, this research's findings offer advice for policymakers concerned with the changing balance of power in Asia and Europe and how to counter China and Russia's influence.

Language Textbooks in the era of Neoliberalism Pau Bori, 2018-02-15 This book examines how neoliberalism finds expression in foreign language textbooks. Moving beyond the usual focus on English, Pau Bori explores the impact of neoliberal ideology on Catalan textbooks. By comparing Catalan textbooks to English textbooks, this book interrogates the similarities and differences between a minor and a global language in the age of neoliberalism. Drawing on insights from critical theory and critical pedagogy, this study provides a fresh perspective on foreign language textbooks and second language education more broadly. *Language Textbooks in the Era of Neoliberalism* paves the way for new critical perspectives in language education that will challenge the current hegemony of neoliberalism.

A Collection of Familiar Quotations John Bartlett, 1856

Further investigations into the nature of phrasal compounding Carola Trips, Jaklin Kornfilt, This collection of papers on phrasal compounding is part of a bigger project whose aims are twofold: First, it seeks to broaden the typological perspective by providing data for as many different languages as possible to gain a better understanding of the phenomenon itself. Second, based on these data which clearly show interaction between syntax and morphology it aims to discuss theoretical models which deal with this kind of interaction in different ways. Models like Generative Grammar, assume components of grammar and a clear-cut distinction between the lexicon (often including morphology) and grammar. Other models like construction grammar do not assume such components and are rather based on a lexicon including constructs. A comparison of these models on the basis of this phenomenon on the morphology-syntax interface makes it possible to assess their descriptive and explanatory power.
