Decisions, Uncertainty, and the Brain Paul W. Glimcher,2004-09-17 In this provocative book, Paul Glimcher argues that economic theory may provide an alternative to the classical Cartesian model of the brain and behavior. Glimcher argues that Cartesian dualism operates from the false premise that the reflex is able to describe behavior in the real world that animals inhabit. A mathematically rich cognitive theory, he claims, could solve the most difficult problems that any environment could present, eliminating the need for dualism by eliminating the need for a reflex theory. Such a mathematically rigorous description of the neural processes that connect sensation and action, he explains, will have its roots in microeconomic theory. Economic theory allows physiologists to define both the optimal course of action that an animal might select and a mathematical route by which that optimal solution can be derived. Glimcher outlines what an economics-based cognitive model might look like and how one would begin to test it empirically. Along the way, he presents a fascinating history of neuroscience. He also discusses related questions about determinism, free will, and the stochastic nature of complex behavior.

The Integrated Nervous System Walter J. Hendelman, Peter Humphreys, Christopher R. Skinner, 2017-07-12 This innovative textbook is modelled on problem-based learning. It bridges the gap between academic neuroanatomy and clinical neurology and effectively takes the reader from the classroom to the clinic, so that learning can be applied in practice. This second edition has been updated and expanded to include many more clinical cases within both the book and the accompanying Web site. This book and the associated Web site will be of practical value to all the professionals who deal with people who have neurological conditions, as well as being invaluable to medical students and residents. This includes psychiatrists (rehabilitation medicine specialists), physiotherapists, occupational therapists and speech therapists, and nurses who specialize in the care of neurological patients. We think that this text will also be of value for family physicians and specialists in internal medicine and pediatrics, all of whom must differentiate between organic pathology of the nervous system and other conditions.

The Balaam Text from Deir 'Alla Re-Evaluated Hoftijzer, Van Der Kooij, 1991 The book concerns the inscription written on wall plaster discovered in 1967 at Deir cAlla in the Jordan Valley, and published in 1976. Using new data and the discussions about the text available to date, it deals with six different aspects of study of the text, namely the archaeological context, the palaeography, the general interpretation as well as the interpretation of several separate passages, the language used, and its relation to Old Testament studies.

Dejong's The Neurologic Examinations Lakshmi Narasimhan Ranganathan, 2019-01-01 Key Points: Numerous illustrations and clinical images ensure proper technique and emphasize key information necessary for an optimally effective examination. Case scenarios bridge the gap between the book and the bedside. The comments section has been tailored to maximize concept in minimum content.

Semitic Words in Egyptian Texts of the New Kingdom and Third Intermediate Period James E. Hoch, 2014-07-14 Semitic words and names appear in unprecedented numbers in texts of the New Kingdom, the period when the Egyptian empire extended into Syria-Palestine. In his book, James Hoch provides a comprehensive account of these words--their likely origins, their contexts, and their implications for the study of Egyptian and Semitic linguistics and Late-Bronze and Iron-Age culture in the eastern Mediterranean. Unlike previous word catalogs, this work consists of concise word studies and contains a wealth of linguistic, lexical, and cultural information. Hoch considers some five hundred Semitic words found in Egyptian texts from about 1500 to 650 b.c.e. Building on previous scholarship, he proposes new etymologies and translations and discusses phonological, morphological, and semantic factors that figure in the use of these words. The Egyptian evidence is essential to an understanding of the phonology of Northwest Semitic, and Hoch presents a major reconstruction of the phonemic systems. Of equal importance is his account of the particular semantic use of Semitic vocabulary, in contexts sometimes quite different from those of the Hebrew scriptures and Ugaritic myths and legends. With its new critical assessment of many hotly debated issues of Semitic and Egyptian philology, this book will be consulted for its lexical and linguistic conclusions and will serve as the basis for future work in both fields.
