**The Pathway** Laurel Mellin,2003-12-23 The ability to self-nurture and set effective limits is the root of human maturity, and the foundation for emotional, behavioural, and spiritual balance. Fortunately, the skills to self-nurture and set effective limits can be fine-tuned and readers will learn them via a wealth of practical examples, colourful case histories, and scientific findings that are both fascinating and easy to understand. These skills are effective for a wide range of psychological and addictive problems—from alcoholism and other addictions to overeating, overworking, overspending, and perfectionism.

**The Royal Road to Health** Charles A. Tyrrell,2015-03-19 In presenting to the

public the one hundredth edition of this work, it is a matter for profound gratification to be able to state that the treatment described in its pages has steadily increased in public favor since its introduction. Tens of thousands of grateful people testify to its efficiency, not only as a remedial process, but better still, as a preventive of disease. Truth must ever prevail, and this treatment being based on natural law (which is unerring), must achieve the desired result, which is the restoration and preservation of health.

**Roads to Health** G. Geltner, 2019-08-02 In Roads to Health, G. Geltner demonstrates that urban dwellers in medieval Italy had a keen sense of the dangers to their health posed by conditions of overcrowding, shortages of food and clean water, air pollution, and the improper disposal of human and animal waste. He consults scientific, narrative, and normative sources that detailed and consistently denounced the physical and environmental hazards urban communities faced: latrines improperly installed and sewers blocked; animals left to roam free and carcasses left rotting on public byways; and thoroughfares congested by artisanal and commercial activities that impeded

circulation, polluted waterways, and raised miasmas. However, as Geltner shows, numerous administrative records also offer ample evidence of the concrete measures cities took to ameliorate unhealthy conditions. Toiling on the frontlines were public functionaries generally known as viarii, or road-masters, appointed to maintain their community's infrastructures and police pertinent human and animal behavior. Operating on a parallel track were the camparii, or field-masters, charged with protecting the city's hinterlands and thereby the quality of what would reach urban markets, taverns, ovens, and mills. *Roads to Health* provides a critical overview of the mandates and activities of the viarii and camparii as enforcers of preventive health and safety policies between roughly 1250 and 1500, and offers three extended case studies, for Lucca, Bologna, and the smaller Piedmont town of Pinerolo. In telling their stories, Geltner contends that preventive health practices, while scientifically informed, emerged neither solely from a centralized regime nor as a reaction to the onset of the Black Death. Instead, they were typically negotiated by diverse stakeholders, including neighborhood residents, officials, artisans, and clergymen, and fostered throughout the centuries by a steady concern for people's greater health.
