Surviving the College Admissions Madness Kevin Robert Martin, 2021-06-08 Unconventional.

Irreverent. Brutal. Entertaining. Unlike any book written about higher education, *Surviving the College Admissions Madness* is a complete takedown of a deeply flawed and thoroughly broken system. Kevin Robert Martin argues that elite universities do not care about their applicants. He observes that college admissions is highly undemocratic and dehumanizing. University bureaucracies alienate applicants from their humanity and sense of self. Reading essay advice books might help you get in, but they won't help you stay sane. Surviving and even thriving depend on digging deep into your beliefs and understanding your behaviors within the broader context of society. This isn't another Admissions 101 how-to to write a killer essay book or a promise of six easy steps for Ivy League acceptance. Martin provides helpful advice for avoiding application mistakes, building a reasonable college list, minimizing debt, identifying cognitive errors and distortions, and helping applicants reframe their college applications. This book equips readers with the vocabulary, frameworks, and tools to make sense of America's broken higher education system, starting with the admissions gatekeepers. *Admissions Madness* is the first of its kind to integrate applicant psychology with the sociology and economics of higher education. Martin observes that a system of bad incentives in education and society wastes hundreds of millions of hours each admissions cycle. It produces profound suffering for tens of thousands of students each year. He writes for families and high school educators who want a deeper understanding of the truth. Elite college admissions undermines students whether they're privileged or marginalized, rich or poor, black or white, rural or urban, first-time freshman or transfer, and domestic or international. Almost everyone loses, even those who get into their dream schools. Elite universities are neither accountable to nor transparent with the public. Early Decision policies and aggressive recruitment and questionable enrollment management practices monopolize universities' leverage over families' well-being. Power disparities between universities and families explain why the admissions process is so stressful and exasperating. Waitlists, appeals, and deferrals keep students in limbo. Endless essay requirements, recommendations, and interviews benefit the university while wasting applicants' time and making them lose sleep and their sanity. Holistic review corrupts students' interests and high school learning environments. Students and families rarely realize that the system doesn't have to be this way. Application numbers skyrocket while first-year student class sizes remain the same despite COVID-19 virtual learning disruptions. Elite universities claim to care about diversity and college access, yet they are hypocrites. Admission by holistic review has noble origins in the civil rights movement, but nowadays, it serves as a tool for oppression. Holistic review is arbitrary, capricious, and prone to error and bias. Martin proposes admission by partial lottery as one reform among many. American meritocracy is a myth. Rather than vehicles for upward mobility, elite universities squeeze out the middle class and contribute to wealth inequality. Universities prioritize generating revenue over a genuine commitment to diversity and access. Understanding these and other inconvenient truths will help students and families survive the college admissions madness.

Applications of Geographic Information Systems for Wireless Network Planning Francisco Saez de Adana, Abdelhamid Tayebi Tayebi, Juan Casado Ballesteros, Josefa Gómez Pérez, 2020-09-30 This practical book shows the procedure to integrate, in a practical way, empirical propagation methods with geographical information systems (GIS) to obtain the radio coverage in open environments. It includes the theoretical explanation of empirical methods and GIS but as a basis to develop a real tool that combines both aspects to provide the user a suitable method for the wireless network planning in urban areas. The book introduces the empirical propagation methods and their application to wireless network planning. The motivation for

combining them with the information obtained from geographical information systems is illustrated as well as their application to real situations. The most important empirical methods used to calculate the propagation in open environments are reviewed. Focus is given to the geometrical information needed to prove the necessity of obtaining some geographical information if these methods must be applied to realistic network planning. A review of the most important GIS is also described. The advantages and disadvantages of every system is analyzed from the point of view of its integration with an empirical propagation method. An application that combines a geographical information system with an empirical propagation method is fully described. The practical features of this integration are completely studied to allow an engineer to use and develop his own tool. Examples are given in each chapter to fully describe and illustrate the process.

Selected Papers from the 5th International Electronic Conference on Sensors and Applications Francisco Falcone,Stefano Mariani,Francesco Ciucci,Dirk Lehmhus,Thomas B. Messervey,Alberto Vallan,Stefan Bosse,2020-12-29 This Special Issue comprises selected papers from the proceedings of the 5th International Electronic Conference on Sensors and Applications, held on 15–30 November 2018, on sciforum.net, an online platform for hosting scholarly e-conferences and discussion groups. In this 5th edition of the electronic conference, contributors were invited to provide papers and presentations from the field of sensors and applications at large, resulting in a wide variety of excellent submissions and topic areas. Papers which attracted the most interest on the web or that provided a particularly innovative contribution were selected for publication in this collection. These peer-reviewed papers are published with the aim of rapid and wide dissemination of research results, developments, and applications. We hope this conference series will grow rapidly in the future and become recognized as a new way and venue by which to (electronically) present new developments related to the field of sensors and their applications.

Panel Data Econometrics Donggyu Sul,2019-02-07 In the last 20 years, econometric theory on panel data has developed rapidly, particularly for analyzing common behaviors among individuals over time. Meanwhile, the statistical methods employed by applied researchers have not kept up-to-date. This book attempts to fill in this gap by teaching researchers how to use the latest panel estimation methods correctly. Almost all applied economics articles use panel data or panel regressions. However, many empirical results from typical panel data analyses are not correctly executed. This book aims to help applied researchers to run panel regressions correctly and avoid common mistakes. The book explains how to model cross-sectional dependence, how to estimate a few key common variables, and how to identify them. It also provides guidance on how to separate out the long-run relationship and common dynamic and idiosyncratic dynamic relationships from a set of panel data. Aimed at applied researchers who want to learn about panel data econometrics by running statistical software, this book provides clear guidance and is supported by a full range of online teaching and learning materials. It includes practice sections on MATLAB, STATA, and GAUSS throughout, along with short and simple econometric theories on basic panel regressions for those who are unfamiliar with econometric theory on traditional panel regressions.

Ultra Wideband Wireless Communication Huseyin Arslan,Zhi Ning Chen,Maria-Gabriella Di Benedetto,2006-10-13 ULTRA WIDEBAND WIRELESS COMMUNICATION AN INTERNATIONAL PANEL OF EXPERTS PROVIDE MAJOR RESEARCH ISSUES AND A SELF-CONTAINED, RAPID INTRODUCTION TO THE THEORY AND APPLICATION OF UWB This book delivers end-to-end coverage of recent advances in both the theory and practical design of ultra wideband (UWB) communication networks. Contributions offer a worldwide perspective on new and emerging applications, including WPAN, sensor and ad hoc networks, wireless telemetry, and telemedicine. The book explores issues related to the physical layer, medium access layer, and networking layer. Following an introductory chapter, the book explores three core areas: Analysis of physical layer and technology issues System design elements, including channel modeling, coexistence, and interference mitigation and control Review of MAC and network layer issues, up to the application Case studies present examples such as network and transceiver design, assisting the reader in understanding the application of theory to real-world tasks. Ultra Wideband Wireless Communication enables technical professionals, graduate students, engineers, scientists, and academic and professional researchers in mobile and wireless communications to become conversant with the latest theory and applications by offering a survey of all important topics in the field. It also serves as an advanced mathematical treatise; however, the book is organized to allow non-technical readers to bypass the mathematical treatments and still gain an excellent understanding of both theory and practice.

Singlewide Sonya Salamon,Katherine MacTavish,2017-10-15 In *Singlewide*, Sonya Salamon and Katherine MacTavish explore the role of the trailer park as a source of affordable housing. America's trailer parks, most in rural places, shelter an estimated 12 million people, and the authors show how these parks serve as a private solution to a pressing public need. *Singlewide* considers the circumstances of families with school-age children in trailer parks serving whites in Illinois, Hispanics in New Mexico, and African Americans in North Carolina. By looking carefully at the daily lives of families who live side by side in rows of manufactured homes, Salamon and MacTavish draw conclusions about the importance of housing, community, and location in the families' dreams of opportunities and success as signified by eventually owning land and a conventional home. Working-poor rural families who engage with what Salamon and MacTavish call the mobile home industrial complex may become caught in an expensive trap starting with their purchase of a mobile home. A family that must site its trailer in a land-lease trailer park struggles to realize any of the anticipated benefits of homeownership. Seeking to break down stereotypes, Salamon and MacTavish reveal the important place that trailer parks hold within the United States national experience. In so doing, they attempt to integrate and normalize a way of life that many see as outside the mainstream, suggesting that families who live in trailer parks, rather than being trailer trash, culturally resemble the parks' neighbors who live in conventional homes.

RedHanded Suruthi Bala,Hannah Maguire,2021-09-14 2021 Listeners' Choice British Podcast Awards Winner What is it about killers, cult leaders, cannibals, cults, and criminals that capture our imaginations even as they terrify and disturb us? How do we responsibly consume these kinds of stories as entertainment, and more importantly, what can we learn from them? RedHanded rejects the narrative of killers as monsters and that a victim was in the wrong place at the wrong time, and instead tells the stories we want to hear in a way that challenges perceptions and asks the hard questions about society, gender, poverty, culture, and even our politics. After meeting at a party in London where they both discovered they listened to the same murder podcasts, Hannah Maguire and Suruthi Bala drunkenly promised to one day start their own true crime podcast together and the rest is history. From the hosts of the hit true crime podcast RedHanded (dubbed by Rick & Morty creator Dan Harmon as the best true crime podcast I've heard, ever), Hannah Maguire and Suruthi Bala have amassed a cult following of spooky bitches amounting to an incredibly strong 63k downloads per episode and 728k backlist downloads every month in the US alone. With candor, humor, interviews with experts, research on real-life cases, and an unflinching dissection of what makes a killer tick, Bala and Maguire take us through the societal, behavioral, and cultural phenomena that make victims -- and their murderers -- our collective responsibility and to find out once and for all: what makes a killer tick?

Red or Dead David Peace,2014-05-27 A New York Times Editors' Choice [T]he stuff of great literature. —The New York Times | Red or Dead is a winner. —The Washington Post The place where the swinging sixties started – Liverpool, England, birthplace of the Beatles – wasn't so swinging. Amid industrial blight and a bad economy, the port town's shipping industry was going bust and there was widespread unemployment, with no assistance from a government tightening its belt. Even the Beatles moved to London. Into these hard times walked Bill Shankly, a former Scottish coal miner who took over the city's perpetually last-place soccer team. He had a straightforward work ethic and a favorite song – a silly pop song done by a local band, "You'll Never Walk Alone." Soon he would have entire stadiums singing along, tens of thousands of people all dressed in the team color red . . . as Liverpool began to win . . . And soon, too, there was something else those thousands of people would chant as one: Shank-lee, Shank-lee . . . In Red or Dead, the acclaimed writer David Peace tells the stirring story of the real-life working-class hero who lifted the spirits of an entire city in turbulent times. But Red or Dead is more than a fictional biography of a real man, and more than a thrilling novel about sports. It is an epic novel that transcends those categories, until there's nothing left to call it but – as many of the world's leading newspapers already have – a masterpiece.
